Contents

Introduction 1

Part 1. Recollections

Chapter 1. Linear Representations of Finite Groups 9
§1.1. Groups 9
§1.2. Homomorphisms of Groups 14
§1.3. Linear Representation of Groups 18
§1.4. Exercises 24

Chapter 2. Rings and Algebras 27
§2.1. Rings 27
§2.2. Homomorphisms of Rings, Algebras 31
§2.3. Ideals 33
§2.4. Exercises 40

Part 2. Introduction and Göbel's Bound

Chapter 3. Rings of Polynomial Invariants 45
§3.1. Linear Group Actions 45
§3.2. Rings of Invariants 53
§3.3. Exercises 60

Chapter 4. Permutation Representations 63
§4.1. Permutation Representations 63
§4.2. Newton, Waring, and Gauss 67
§4.3. Göbel's Bound 75
§4.4. Exercises 87

Application: Decay of a Spinless Particle 91

Application: Counting Weighted Graphs 95

Part 3. The First Fundamental Theorem of Invariant Theory and Noether's Bound

Chapter 5. Construction of Invariants 99
§5.1. Orbit Chern Classes 99
§5.2. The Transfer 103
§5.3. New Invariants from Old Ones 109
§5.4. Exercises 113

Chapter 6. Noether's Bound 117
§6.1. The Noether Map 117
§6.2. Polarizations 123
§6.3. The First Fundamental Theorem of Invariant Theory for Σ_d 127
§6.4. Noether's Bound 130
§6.5. Exercises 135

Chapter 7. Some Families of Invariants 137
§7.1. Invariants of Representations of Cyclic Groups 137
§7.2. Pseudoreflection Groups 141
§7.3. Vector Invariants 148
§7.4. Exercises 151

Application: Production of Fibre Composites 155

Application: Gaussian Quadrature 159

Part 4. Noether's Theorems

Chapter 8. Modules 165
§8.1. Modules and Module Homomorphisms 165
§8.2. Operations on Modules 170
§8.3. Direct Sums, Free Modules, and Finite Generatedness 172
§8.4. Maschke's Theorem and Schur's Lemma 176
§8.5. Exercises 182

Chapter 9. Integral Dependence and the Krull Relations 185
§9.1. Integral Dependence 185
§9.2. Integral Extensions 190
§9.3. The Krull Relations 193
§9.4. Exercises 198

Chapter 10. Noether's Theorems 201
§10.1. Finite Generatedness 201
§10.2. The Krull Dimension 208
§10.3. Examples 212
§10.4. Exercises 217

Application: Self-Dual Codes 219

Part 5. Advanced Counting Methods and the Shephard-Todd-Chevalley Theorem

Chapter 11. Poincaré Series 225
§11.1. Poincaré Series 225
§11.2. Molien's Theorem 233
§11.3. Exercises 242

Chapter 12. Systems of Parameters 245
§12.1. System of Parameters 245
§12.2. Hilbert's Nullstellensatz 249
§12.3. Primary and Secondary Generators 252

§12.4. Dade's Basis 258
§12.5. The Degree Theorem 261
§12.6. Exercises 265

Chapter 13. Pseudoreflection Representations 267
§13.1. Pseudoreflections 267
§13.2. The Shephard-Todd-Chevalley Theorem, Part I 270
§13.3. The Shephard-Todd-Chevalley Theorem, Part II 275
§13.4. Exercises 281

Application: Counting Partitions 283

Appendix A. Rational Invariants 287
§A.1. Algebraic Field Extensions 287
§A.2. Splitting Fields and Normal Extensions 293
§A.3. Galois Extensions 295
§A.4. Examples 298
§A.5. Exercises 302

Suggestions for Further Reading 303
