
Table of contents

Table of contents	vii
IAS/Park City Mathematics Institute	xi
Preface	xiii
Chapter 1. The euclidean plane	1
§1.1. Euclidean length and distance	1
§1.2. Shortest curves	3
§1.3. Metric spaces	3
§1.4. Isometries	5
Exercises for Chapter 1	7
Chapter 2. The hyperbolic plane	11
§2.1. The hyperbolic plane	11
§2.2. Some isometries of the hyperbolic plane	14
§2.3. Shortest curves in the hyperbolic plane	17
§2.4. All isometries of the hyperbolic plane	23
§2.5. Linear and antilinear fractional maps	27
§2.6. The hyperbolic norm	33
§2.7. The disk model for the hyperbolic plane	36

Exercises for Chapter 2	39
Chapter 3. The 2-dimensional sphere	47
§3.1. The 2-dimensional sphere	47
§3.2. Shortest curves	48
§3.3. Isometries	49
Exercises for Chapter 3	50
Chapter 4. Gluing constructions	55
§4.1. Informal examples: the cylinder and the torus	55
§4.2. Mathematical definition of gluings and quotient spaces	58
§4.3. Gluing the edges of a euclidean polygon	61
§4.4. Proofs of Theorems 4.3 and 4.4	67
§4.5. Gluing hyperbolic and spherical polygons	79
Exercises for Chapter 4	84
Chapter 5. Gluing examples	89
§5.1. Some euclidean surfaces	89
§5.2. The surface of genus 2	97
§5.3. The projective plane	102
§5.4. The cylinder and the Möbius strip	103
§5.5. The once-punctured torus	114
§5.6. Triangular pillowcases	125
Exercises for Chapter 5	126
Chapter 6. Tessellations	133
§6.1. Tessellations	133
§6.2. Complete metric spaces	134
§6.3. From gluing polygon edges to tessellations	135
§6.4. Completeness and compactness properties	147
§6.5. Tessellations by bounded polygons	155
§6.6. Tessellations by unbounded polygons	161
§6.7. Incomplete hyperbolic surfaces	163

§6.8. Poincaré’s polygon theorem	169
Exercises for Chapter 6	182
Chapter 7. Group actions and fundamental domains	185
§7.1. Transformation groups	185
§7.2. Group actions and quotient spaces	187
§7.3. Fundamental domains	192
§7.4. Dirichlet domains	197
Exercises for Chapter 7	202
Chapter 8. The Farey tessellation and circle packing	207
§8.1. The Farey circle packing and tessellation	207
§8.2. The Farey tessellation and the once-punctured torus	212
§8.3. Horocircles and the Farey circle packing	214
§8.4. Shearing the Farey tessellation	217
Exercises for Chapter 8	222
Chapter 9. The 3-dimensional hyperbolic space	227
§9.1. The hyperbolic space	227
§9.2. Shortest curves in the hyperbolic space	230
§9.3. Isometries of the hyperbolic space	231
§9.4. Hyperbolic planes and horospheres	234
Exercises for Chapter 9	235
Chapter 10. Kleinian groups	241
§10.1. Bending the Farey tessellation	241
§10.2. Kleinian groups and their limit sets	247
§10.3. First rigorous example: fuchsian groups	252
§10.4. Poincaré’s Polyhedron Theorem	257
§10.5. More examples of kleinian groups	265
§10.6. Poincaré, Fuchs and Klein	283
Exercises for Chapter 10	286
Chapter 11. The figure-eight knot complement	293

§11.1. Another crooked Farey tessellation	293
§11.2. Enlarging the group Γ_8	294
§11.3. Limit sets	299
§11.4. The figure-eight knot	303
Exercises for Chapter 11	312
Chapter 12. Geometrization theorems in dimension 3	315
§12.1. Knots	315
§12.2. The Geometrization Theorem for knot complements	319
§12.3. Mostow's Rigidity Theorem	324
§12.4. Ford domains	326
§12.5. The general Geometrization Theorem	340
Exercises for Chapter 12	351
Appendix. Tool Kit	355
§T.1. Elementary set theory	355
§T.2. Maximum, minimum, supremum, and infimum	358
§T.3. Limits and continuity. Limits involving infinity	360
§T.4. Complex numbers	361
Supplemental bibliography and references	365
Supplemental bibliography	365
References	369
Index	377
