

Contents

Preface	vii
CHAPTER 1	
Introduction and overview of the results	1
1. The methodology	3
2. Convergence results for gradient-like trajectories	8
3. Applications to gradient-like systems in Hilbert spaces	10
4. Application to the stability problem	15
5. Additional remarks	17
CHAPTER 2	
Gradient inequality	21
1. Basic properties of gradient maps	21
2. Gradient inequality	22
3. Finite-dimensional gradient inequality	25
4. Infinite-dimensional gradient inequality	34
5. Variational gradient inequality	45
6. Gradient inequality for monotone gradient maps	48
7. Optimal gradient inequality in Hilbert spaces	49
8. Remarks on gradient inequalities of type \mathcal{G}_k	51
CHAPTER 3	
Abstract convergence results	59
1. Gradient-like systems	59
2. Three technical lemmas	63
3. Convergence in gradient-like systems	67
4. Convergence in Hilbert spaces	76
5. Convergence in variational problems	98
CHAPTER 4	
Applications to semilinear gradient-like systems in Hilbert spaces	101
1. The generic case	101

2. The perfect case	134
3. Results around the Laplacian operators	141
4. Ginzburg-Landau models for superconductivity	157
5. Convergence in porous medium models	160
CHAPTER 5	
Applications to the stability problem	163
1. Stability of ground states	163
2. Convergence and stability of the steepest descent method	169
3. The structure of equilibria sets of convergent systems	173
4. Numeric test	174
Bibliography	177
Index	183
