Preface	vii
Chapter 1. Review of foliation theory	1
1.1. Basic notions	1
1.2. Transverse geometry	8
Chapter 2. Foliated CR manifolds	15
2.1. The normal bundle	23
2.2. Foliations of CR manifolds and the Fefferman metric	26
2.3. Foliated Lorentz manifolds	32
2.4. The second fundamental form	37
2.5. The characteristic form	43
Chapter 3. Levi foliations	47
3.1. Existence of Levi foliations	47
3.2. Holomorphic extension of Levi foliations	48
3.3. Pluriharmonic defining functions	56
3.4. Holomorphic degeneracy	58
3.5. Twistor CR manifolds	62
3.6. Analysis on pseudoconvex domains	64
Chapter 4. Levi foliations of CR submanifolds in $\mathbb{C}P^N$	73
4.1. Nonexistence of smooth Levi flat hypersurfaces	73
4.2. Lefschetz type results for CR submanifolds in $\mathbb{C}P^N$	74
4.3. CR submanifolds of maximal CR dimension	76
Chapter 5. Tangentially CR foliations	81
5.1. The basic Cauchy-Riemann complex	81
5.2. The filtration $\{F^r\Omega^{0,\bullet} : r \geq 0\}$	84
5.3. The Graham-Lee connection	87
5.4. Boundary values of Yang-Mills fields	95
5.5. Flows	109
5.6. Monge-Ampère foliations	112
Chapter 6. Transversally CR foliations	121
6.1. Transversally CR foliations	123
6.2. CR foliations built by suspension	129
6.3. Transverse pseudohermitian geometry	130
6.4. Degenerate CR manifolds	134
6.5. The transverse Cauchy-Riemann complex	137
6.6. Canonical transverse connections	142

6.7. The embedding problem	147
Chapter 7. $\mathcal{G}$ -Lie foliations	151
7.1. $\mathcal{G}$ -Lie foliations and transverse CR structures	151
7.2. Transverse $f$ -structures	154
Chapter 8. Transverse Beltrami equations	163
8.1. Automorphisms of the transverse contact structure	164
8.2. $K$ -quasiconformal automorphisms	168
Chapter 9. Review of orbifold theory	173
9.1. Defining families	173
9.2. The local structure of $\tilde{S}$	174
9.3. The monomorphism $\eta$	176
9.4. The singular locus	179
9.5. Vector bundles over orbifolds	183
9.6. Transition functions	185
9.7. Compact Hausdorff foliations	186
Chapter 10. Pseudo-differential operators on orbifolds	189
10.1. The Girbau-Nicolau condition	189
10.2. Composition of pseudo-differential operators	193
10.3. Elliptic operators on orbifolds	193
Chapter 11. Cauchy-Riemann Orbifolds	201
11.1. Parabolic geodesics	203
11.2. Complex orbifolds	206
11.3. Real hypersurfaces	214
11.4. CR orbifolds	215
11.5. A parametrix for $\square_{\Omega}$	219
Appendix A. Holomorphic bisectional curvature	229
Appendix B. Partition of unity on orbifolds	231
Appendix C. Pseudo-differential operators on $\mathbb{R}^n$	237
Bibliography	243
Index	253
