Preface	xiii
Notational conventions	xxiii
Leitfaden	xxv
Chapter 0. Getting started	1
§0.1. Cartan matrices and their two realizations	1
§0.2. Free algebras and presentations with generators and relations	6
§0.3. Examples: the realization problem	12
§0.4. Counting over finite fields: Gaussian polynomials	17
§0.5. Canonical bases: the matrix construction	22
§0.6. Finite dimensional semisimple Lie algebras	25
Exercises and notes	34
<b>Part 1. Quivers and Their Representations</b>	
Chapter 1. Representations of quivers	43
§1.1. Quivers and their representations	44
§1.2. Euler forms, Cartan matrices, and the classification of quivers	49
§1.3. Weyl groups and root systems	55
§1.4. Bernstein–Gelfand–Ponomarev reflection functors	60
§1.5. Gabriel’s theorem	65
§1.6. Representation varieties and generic extensions	70
Exercises and notes	74

---

Chapter 2. Algebras with Frobenius morphisms	83
§2.1. $\mathbb{F}_q$ -structures on vector spaces	84
§2.2. Algebras with Frobenius morphisms and Frobenius twists	86
§2.3. $F$ -stable $A$ -modules	91
§2.4. A construction of indecomposable $F$ -stable modules	94
§2.5. A functorial approach to the representation theory	98
§2.6. Almost split sequences	105
§2.7. Irreducible morphisms	112
§2.8. Frobenius folding of almost split sequences	117
Exercises and notes	121
Chapter 3. Quivers with automorphisms	127
§3.1. Quivers with automorphisms and valued quivers	128
§3.2. Automorphisms of Dynkin and tame quivers	135
§3.3. Modulated quivers and Auslander–Reiten quivers	140
§3.4. Preprojective and preinjective components	145
§3.5. Modulated quivers attached to quivers with automorphisms	150
§3.6. Frobenius folding of Auslander–Reiten quivers	156
§3.7. Finite dimensional algebras over a finite field	164
§3.8. Representations of tame quivers with automorphisms	170
Exercises and notes	174
<b>Part 2. Some Quantized Algebras</b>	
Chapter 4. Coxeter groups and Hecke algebras	183
§4.1. Coxeter groups	184
§4.2. An example: symmetric groups	193
§4.3. Parabolic subgroups and affine Weyl groups	197
§4.4. Hecke algebras	203
§4.5. Hecke monoids	208
§4.6. Counting with finite general linear groups	212
§4.7. Integral Hecke algebras associated with $\mathrm{GL}_n(q)$	218
Exercises and notes	223
Chapter 5. Hopf algebras and universal enveloping algebras	229
§5.1. Coalgebras, bialgebras, and Hopf algebras	230
§5.2. Universal enveloping algebras and PBW bases	239

---

§5.3. Universal enveloping algebras of Kac–Moody Lie algebras	244
§5.4. Symmetry structures of Kac–Moody Lie algebras	247
§5.5. Braid group actions	252
§5.6. Quantum $\mathfrak{sl}_2$	256
Exercises and notes	263
Chapter 6. Quantum enveloping algebras	271
§6.1. Quantum enveloping algebras	271
§6.2. The elementary structure of $\mathbf{U}$	275
§6.3. The Hopf algebra structure of $\mathbf{U}$	278
§6.4. The adjoint action and triangular decomposition	283
§6.5. Annihilators of integrable $\mathbf{U}$ -modules	289
§6.6. Integrable $\mathbf{U}_v(\mathfrak{sl}_2)$ -modules and their symmetries	295
§6.7. Symmetries of integrable $\mathbf{U}$ -modules	302
§6.8. Symmetry of $\mathbf{U}$ and braid group actions	305
§6.9. An integral structure	308
§6.10. A PBW theorem for finite type	315
Exercises and notes	318
<b>Part 3. Representations of Symmetric Groups</b>	
Chapter 7. Kazhdan–Lusztig combinatorics for Hecke algebras	325
§7.1. $R$ -polynomials and Kazhdan–Lusztig bases	326
§7.2. Multiplication formulas and Kazhdan–Lusztig polynomials	328
§7.3. Inverse Kazhdan–Lusztig polynomials and dual bases	332
§7.4. Cells	335
§7.5. Knuth and Vogan classes	338
§7.6. $q$ -permutation modules and their canonical bases	342
§7.7. Cell modules and the $\text{Ext}^1$ -vanishing property	349
§7.8. The positivity property	353
Exercises and notes	361
Chapter 8. Cells and representations of symmetric groups	367
§8.1. The row-insertion algorithm	368
§8.2. The RSK correspondence	370
§8.3. The symmetry of the RSK correspondence	375
§8.4. Knuth equivalence classes in $\mathfrak{S}_r$	379

---

§8.5. Left cells in symmetric groups	382
§8.6. The irreducibility of cell modules	388
§8.7. An Artin–Wedderburn decomposition for $\mathcal{H}(\mathfrak{S}_r)_{\mathbb{Q}(v)}$	392
§8.8. A poset isomorphism	395
Exercises and notes	399
Chapter 9. The integral theory of quantum Schur algebras	405
§9.1. The quantum Schur algebra	406
§9.2. Specht modules and Specht data	412
§9.3. Canonical bases for quantum Schur algebras	415
§9.4. The cellular property of quantum Schur algebras	418
§9.5. Standard modules: canonical bases, duality, and beyond	423
§9.6. The integral double centralizer property	427
Exercises and notes	431
<b>Part 4. Ringel–Hall Algebras: A Realization for the <math>\pm</math>-Parts</b>	
Chapter 10. Ringel–Hall algebras	437
§10.1. Integral Hall algebras	438
§10.2. Ringel’s fundamental relations	441
§10.3. Ringel–Hall algebras	444
§10.4. Hall polynomials	449
§10.5. Generic Ringel–Hall algebras of finite type	456
Exercises and notes	461
Chapter 11. Bases of quantum enveloping algebras of finite type	467
§11.1. Generic extension monoids	468
§11.2. Reduced filtrations and distinguished words	472
§11.3. Monomial bases	478
§11.4. Reflection functors and subalgebras of Ringel–Hall algebras	483
§11.5. The Lusztig symmetries and PBW-type bases	488
§11.6. An elementary algebraic construction of canonical bases	494
§11.7. An example: canonical basis of $\mathbf{U}_v^+(\mathfrak{sl}_3)$	497
Exercises and notes	500
Chapter 12. Green’s theorem	505
§12.1. Comultiplication on Ringel–Hall algebras	505
§12.2. Some counting lemmas	511

---

§12.3.	Proof of Green's formula	516
§12.4.	Green algebras and Lusztig's theorem	523
§12.5.	Green's theorem	527
	Exercises and notes	532
<b>Part 5. The BLM Algebra: A Realization for Quantum <math>\mathfrak{gl}_n</math></b>		
Chapter 13.	Serre relations in quantum Schur algebras	537
§13.1.	$n$ -step flags and the orbit–matrix correspondence	538
§13.2.	Dimensions of orbits	541
§13.3.	Orbits corresponding to almost diagonal matrices	544
§13.4.	A quantumization for quantum Schur algebras	546
§13.5.	The fundamental multiplication formulas	550
§13.6.	Some partial orderings on $\Xi(n)$ and $\tilde{\Xi}(n)$	558
§13.7.	The BLM triangular relations	560
§13.8.	Extending the fundamental multiplication formulas	567
§13.9.	Generators and relations	572
§13.10.	Presentations for quantum Schur algebras	577
	Exercises and notes	587
Chapter 14.	Constructing quantum $\mathfrak{gl}_n$ via quantum Schur algebras	591
§14.1.	A stabilization property	592
§14.2.	The BLM algebra $\mathbf{K}$ and its canonical basis	595
§14.3.	The completion $\widehat{\mathbf{K}}$ of $\mathbf{K}$ and multiplication formulas	598
§14.4.	Embedding $\mathbf{U}_v(\mathfrak{gl}_n)$ into $\widehat{\mathbf{K}}$	602
§14.5.	$\mathcal{Z}$ -forms of $\mathbf{U}_v(\mathfrak{gl}_n)$	606
§14.6.	Integral quantum Schur–Weyl reciprocity	609
§14.7.	A connection with Ringel–Hall algebras	614
	Exercises and notes	617
<b>Appendices</b>		
Appendix A.	Varieties and affine algebraic groups	623
§A.1.	Affine varieties	624
§A.2.	Varieties	630
§A.3.	Affine algebraic groups	633
§A.4.	Parabolic subgroups and the Chevalley–Bruhat ordering	643
§A.5.	Representation theory: a first view	645

---

§A.6. Representations in positive characteristic; Frobenius morphisms	649
§A.7. Induced representations and the Weyl character formula	654
§A.8. Higher Ext functors; $\Delta$ - and $\nabla$ -filtrations	658
Exercises and notes	660
Appendix B. Quantum linear groups through coordinate algebras	669
§B.1. Quantum linear algebra	670
§B.2. Quantum linear groups	677
§B.3. Multiparameter quantum matrix spaces	683
§B.4. An application: quantum Schur algebras	691
Exercises and notes	695
Appendix C. Quasi-hereditary and cellular algebras	699
§C.1. Heredity ideals	700
§C.2. Quasi-hereditary algebras and highest weight categories	704
§C.3. Regular rings of Krull dimension at most 2	709
§C.4. Integral quasi-hereditary algebras	715
§C.5. Algebras with a Specht datum	719
§C.6. Cellular algebras	720
Exercises and notes	726
Bibliography	733
Index of notation	749
Index of terminology	755
