Introduction	ix
Chapter I. Measure preserving automorphisms	1
1. The group $\text{Aut}(X, \mu)$	1
2. Some basic facts about $\text{Aut}(X, \mu)$	5
3. Full groups of equivalence relations	13
4. The Reconstruction Theorem	20
5. Turbulence of conjugacy	30
6. Automorphism groups of equivalence relations	40
7. The outer automorphism group	44
8. Costs and the outer automorphism group	48
9. Inner amenability	52
Chapter II. The space of actions	61
10. Basic properties	61
11. Characterizations of groups with property (T) and HAP	79
12. The structure of the set of ergodic actions	84
13. Turbulence of conjugacy in the ergodic actions	90
14. Conjugacy in ergodic actions of property (T) groups	98
15. Connectedness in the space of actions	105
16. The action of $\text{SL}_2(\mathbb{Z})$ on $\mathbb{T}^2$	113
17. Non-orbit equivalent actions of free groups	117
18. Classifying group actions: A survey	122
Chapter III. Cocycles and cohomology	125
19. Group-valued random variables	125
20. Cocycles	129
21. The Mackey action and reduction cocycles	135
22. Homogeneous spaces and Effros' Theorem	143
23. Isometric actions	145
24. Topology on the space of cocycles	148
25. Cohomology I: Some general facts	150
26. Cohomology II: The hyperfinite case	153
27. Cohomology III: The non $E_0$ -ergodic case	158
28. The minimal condition on centralizers	168
29. Cohomology IV: The $E_0$ -ergodic case	170
30. Cohomology V: Actions of property (T) groups	179

Appendix A.	Realifications and complexifications	187
Appendix B.	Tensor products of Hilbert spaces	189
Appendix C.	Gaussian probability spaces	191
Appendix D.	Wiener chaos decomposition	193
Appendix E.	Extending representations to actions	197
Appendix F.	Unitary representations of abelian groups	199
Appendix G.	Induced representations and actions	203
Appendix H.	The space of unitary representations	207
Appendix I.	Semidirect products of groups	223
	Bibliography	227
	Index	233
