Preface

Professor Mischa Cotlar arrived in Venezuela for the first time in 1971, and we have been fortunate to have him with us permanently since 1974. Throughout the years since, he has had a decisive influence in the development here of the areas of harmonic analysis and operator theory. In 1993, when Mischa celebrated his 80th birthday, his friends in Caracas, students and colleagues, decided to pay homage to this extraordinary person. The celebration crystalized as a conference on Harmonic Analysis and Operator Theory held in Caracas, January 3–8, 1994, and this volume, comprising papers submitted by a number of participants.

The organizers of the conference wish to take this opportunity to acknowledge the financial support received from CONICIT (Venezuela), Fundación Polar, Congreso Nacional de Venezuela, Universidad Central de Venezuela, Universidad Simón Bolívar, Instituto Venezolano de Investigaciones Científicas, and the U.S. National Science Foundation, and to thank the close to one hundred mathematicians who through their participation contributed to the success of the conference.

The editors of this volume wish to thank the authors for their contribution to this celebration of Mischa Cotlar, the referees for their careful scrutiny of the papers, and the AMS for providing this outlet for the volume.

Harmonic Analysis and Operator Theory
S. A. M. Marcantognini, G. A. Mendoza, M. D. Morán,
A. Octavio, and W. O. Urbina, Editors

This book is a collection of papers reflecting the conference held in Caracas, Venezuela, in January 1994 in celebration of Professor Mischa Cotlar's eightieth birthday. Presenting an excellent account of recent advances in harmonic analysis and operator theory and their applications, many of the contributors are world leaders in their fields. The collection covers a broad spectrum of topics, including:

- wavelet analysis
- Haenkel operators
- multimeasure theory
- the boundary behavior of the Bergman kernel
- interpolation theory
- Cotlar's Lemma on almost orthogonality in the context of L^p spaces and more. . .

The range of topics in this volume promotes cross-pollination among the various fields covered. Such variety makes "Harmonic Analysis and Operator Theory" an inspiration for graduate students interested in this area of study.
