Preface

“Operads” are mathematical devices which model many sorts of algebras (such as associative, commutative, Lie, Poisson, alternative, Leibniz, etc., including those defined up to homotopy, such as A_∞ -algebras). The notion of an operad appeared in the seventies in algebraic topology (J. Stasheff, J. P. May, J. M. Boardman, R. M. Vogt), but there has been a renaissance of this theory due to the discovery of relationships with graph cohomology, Koszul duality, representation theory, combinatorics, cyclic cohomology, moduli spaces, knot theory, and quantum field theory.

This renaissance was recognized at a special session “Moduli spaces, operads, and representation theory” of the AMS meeting at Hartford, CT, on March 4–5, 1995, and at a conference “Opérades et algèbre homotopique” held at the Centre International de Rencontres Mathématiques at Luminy, France, from May 29 to June 2, 1995. Both meetings drew a diverse group of researchers, as we hope these proceedings reflect, though not all the speakers are represented here.

We have arranged the contributions so as to emphasize certain themes around which the renaissance of operads took place: homotopy algebra, algebraic topology, polyhedra and combinatorics, and applications to physics. We begin the collection with two short papers which drop out of this classification. The first one is the paper “Definitions: operads, algebras and modules” by Peter May, which recalls basic notions of operad theory. The other paper, “The pre-history of operads”, by one of us describes how operads had been used before they were created.

Jean-Louis Loday, Jim Stasheff, and Alexander A. Voronov

- total square, 240
- transgression, 424
- tree level, 66
- tree operad, 12, 54
- triangulations, 33
- triple, 168
- truncation, 12, 58, 75

- $U(A)$, 23, 292
- unital operads, 4
- unitary genus-zero conformal field theory, 352
- universal enveloping algebra, 23
- unshuffles, 63

- Vassiliev invariants, 305, 307, 327
- Verlinde algebra, 345, 358
- vertex associative algebra of central charge c , 342
- vertex operator, 393

- vertex operator algebras, VOAs, 53, 66, 306, 396
- vertex operator graded algebra, 311
- vertex partial operad, 340
- Virasoro algebra, 66, 408, 414, 416

- W_n , 58
- WDVV equation, 408
- weak Bruhat order, 50
- weight system, 328
- Whitehead bracket, 65
- Whitehead product, 63
- Witten, 421
- Witten's tau-function, 413

- Yang-Baxter operator, 279

- zilchgon, 33

Selected Titles in This Series

(Continued from the front of this publication)

- 173 **Robert Brooks, Carolyn Gordon, and Peter Perry, Editors**, Geometry of the spectrum, 1994
- 172 **Peter E. Kloeden and Kenneth J. Palmer, Editors**, Chaotic numerics, 1994
- 171 **Rüdiger Göbel, Paul Hill, and Wolfgang Liebert, Editors**, Abelian group theory and related topics, 1994
- 170 **John K. Beem and Krishan L. Duggal, Editors**, Differential geometry and mathematical physics, 1994
- 169 **William Abikoff, Joan S. Birman, and Kathryn Kuiken, Editors**, The mathematical legacy of Wilhelm Magnus, 1994
- 168 **Gary L. Mullen and Peter Jau-Shyong Shiue, Editors**, Finite fields: Theory, applications, and algorithms, 1994
- 167 **Robert S. Doran, Editor**, C^* -algebras: 1943–1993, 1994
- 166 **George E. Andrews, David M. Bressoud, and L. Alayne Parson, Editors**, The Rademacher legacy to mathematics, 1994
- 165 **Barry Mazur and Glenn Stevens, Editors**, p -adic monodromy and the Birch and Swinnerton-Dyer conjecture, 1994
- 164 **Cameron Gordon, Yoav Moriah, and Bronislaw Wajnryb, Editors**, Geometric topology, 1994
- 163 **Zhong-Ci Shi and Chung-Chun Yang, Editors**, Computational mathematics in China, 1994
- 162 **Ciro Ciliberto, E. Laura Livorni, and Andrew J. Sommese, Editors**, Classification of algebraic varieties, 1994
- 161 **Paul A. Schweitzer, S. J., Steven Hurder, Nathan Moreira dos Santos, and José Luis Arraut, Editors**, Differential topology, foliations, and group actions, 1994
- 160 **Niky Kamran and Peter J. Olver, Editors**, Lie algebras, cohomology, and new applications to quantum mechanics, 1994
- 159 **William J. Heinzer, Craig L. Huneke, and Judith D. Sally, Editors**, Commutative algebra: Syzygies, multiplicities, and birational algebra, 1994
- 158 **Eric M. Friedlander and Mark E. Mahowald, Editors**, Topology and representation theory, 1994
- 157 **Alfo Quarteroni, Jacques Periaux, Yuri A. Kuznetsov, and Olof B. Widlund, Editors**, Domain decomposition methods in science and engineering, 1994
- 156 **Steven R. Givant**, The structure of relation algebras generated by relativizations, 1994
- 155 **William B. Jacob, Tsit-Yuen Lam, and Robert O. Robson, Editors**, Recent advances in real algebraic geometry and quadratic forms, 1994
- 154 **Michael Eastwood, Joseph Wolf, and Roger Zierau, Editors**, The Penrose transform and analytic cohomology in representation theory, 1993
- 153 **Richard S. Elman, Murray M. Schacher, and V. S. Varadarajan, Editors**, Linear algebraic groups and their representations, 1993
- 152 **Christopher K. McCord, Editor**, Nielsen theory and dynamical systems, 1993
- 151 **Matatyahu Rubin**, The reconstruction of trees from their automorphism groups, 1993
- 150 **Carl-Friedrich Bödigheimer and Richard M. Hain, Editors**, Mapping class groups and moduli spaces of Riemann surfaces, 1993
- 149 **Harry Cohn, Editor**, Doebelin and modern probability, 1993
- 148 **Jeffrey Fox and Peter Haskell, Editors**, Index theory and operator algebras, 1993
- 147 **Neil Robertson and Paul Seymour, Editors**, Graph structure theory, 1993
- 146 **Martin C. Tangora, Editor**, Algebraic topology, 1993

Operads: Proceedings of Renaissance Conferences

Jean-Louis Loday, James D. Stasheff, and
Alexander A. Voronov, Editors

“Operads” are mathematical devices which model many sorts of algebras (such as associative, commutative, Lie, Poisson, alternative, Leibniz, etc., including those defined up to homotopy, such as A_∞ -algebras). Since the notion of an operad appeared in the seventies in algebraic topology, there has been a renaissance of this theory due to the discovery of relationships with graph cohomology, Koszul duality, representation theory, combinatorics, cyclic cohomology, moduli spaces, knot theory, and quantum field theory.

This renaissance was recognized at a special session “Moduli Spaces, Operads, and Representation Theory” of the AMS meeting in Hartford, CT (March 1995), and at a conference “Opérades et Algèbre Homotopique” held at the Centre International de Rencontres Mathématiques at Luminy, France (May–June 1995). Both meetings drew a diverse group of researchers.

The authors have arranged the contributions so as to emphasize certain themes around which the renaissance of operads took place: homotopy algebra, algebraic topology, polyhedra and combinatorics, and applications to physics.
