Preface

The papers collected in this volume are authored by the participants of two special sessions: the AMS Special Session on Topology in Dynamics held in Winston-Salem, North Carolina, October 9–10, 1998, and the AMS-AWM Special Session on Geometry in Dynamics held in San Antonio, Texas, January 13–16, 1999. Each contribution is concerned with some aspect of the topology or geometry of dynamical systems. Topics of the papers in this volume include: blowups, contact structures, continua, foliations and laminations, fractal dimension, Grassmannians, homoclinic tangles, inverse limits, isotopy stability, iterated function systems, knotted orbits, Morse homology, and the three-body problem.

It is our pleasure to thank the participants of the special sessions, the contributors to this volume, and the referees. We would especially like to thank Christine Thivierge for her assistance in preparing this volume.

Geometry and Topology in Dynamics

Marcy Barge and Krystyna Kuperberg, Editors

This volume consists of the written presentations of lectures given at two special sessions: the AMS Special Session on Topology in Dynamics (Winston-Salem, NC) and the AMS-AWM Special Session on Geometry in Dynamics (San Antonio, TX). Each article concerns aspects of the topology or geometry of dynamical systems. Topics covered include the following: foliations and laminations, iterated function systems, the three-body problem, isotopy stability, homoclinic tangles, fractal dimension, Morse homology, knotted orbits, inverse limits, contact structures, Grassmanians, blowups, and continua.

New results are presented reflecting current trends in topological aspects of dynamical systems. The book offers a wide variety of topics of special interest to those working this area bridging topology and dynamical systems.
