Preface

The Second International Conference on Complex Analysis and Dynamical Systems (*CA&DS II*), sponsored by ORT Braude College (Karmiel, Israel), Bar-Ilan University, and the University of Potsdam, took place at the Carlton Hotel in Nahariya, Israel, during June 9–12, 2003. This was the fourth in a series of mathematics conferences organized by ORT Braude over the past several years. Altogether, 78 participants from over a dozen countries attended the Conference, which was held in honor of Professor Lawrence Zalcman's sixtieth birthday.

This volume is the tangible record of *CA&DS II*. Most of the papers collected here have been contributed by participants in the Conference. In some cases, they have chosen to submit manuscripts which depart from the texts of their lectures. There are also contributions from participants who did not speak at the Conference, as well as several papers by friends and admirers of Larry Zalcman who were unable to attend. All submissions have been carefully refereed. Taken together, the papers presented here cover an extraordinarily broad range of subjects within complex analysis and bordering areas and testify to the continuing vitality of the interplay between classical and modern analysis.

We acknowledge with thanks the support provided for the Conference by the Gelbart Research Institute for Mathematical Sciences and the Emmy Noether Research Institute for Mathematics of Bar-Ilan University and the Sacta-Rashi Foundation and for the preparation of this volume by the Gelbart and Noether Institutes. Special thanks to the technical editor, Miriam Beller, for her heroic efforts to produce this volume in a timely fashion and to Jeremy Schiff for superb technical assistance when it mattered most.

This volume is a collection of papers reflecting the conference held in Nahariya, Israel in honor of Professor Lawrence Zalcman's sixtieth birthday. The papers, many written by leading authorities, range widely over classical complex analysis of one and several variables, differential equations, and integral geometry. To mention just some of those areas addressed within the theory of functions of one complex variable, there are studies on complex dynamics, elliptic functions, Kleinian groups, quasiconformal mappings, Tauberian theorems, univalent functions, and value distribution theory.

Taken together, the papers in this volume provide a snapshot of activity in complex analysis at the beginning of the twenty-first century and testify to the continuing vitality of the interplay between classical and modern analysis.
