Preface

The Robert Brooks Memorial Conference on Geometry and Spectral Theory took place at the Technion - Israel Institute of Technology, Haifa, Israel, on December 29, 2003 - January 2, 2004 and was immediately followed by the Workshop on Groups, Geometry and Dynamics, January 5-9, 2004.

The conference and the workshop were held under the auspices of the Center for Mathematical Studies (CMS) at the Technion. We thank the CMS and its director, Professor Baruch Solel, for letting us organize this program. We are grateful to the Mallat Family Fund for Research in Mathematics that supported the program and to Professors Dov Aharonov, Alexander Ioffe, Vladimir Lin, Alexander Nepomnyashchy, Allan Pinkus, Jack Sonn and Uri Srebro who provided additional financial support for the conference from their chair funds. We owe a great debt to the CMS secretary Sylvia Schur (she has passed away to our great sorrow) for her excellent job in handling all the technical matters related to the conference. We also thank Hava Harel, Galia Khanin, Ruth Markevich and the rest of the staff at the Technion Department of Mathematics, for their professional technical and logistical support. We thank the Editorial Board of the Israel Mathematics Conference Proceedings for agreeing to publish this volume. We thank Professor Lawrence Zalcman for his editorial work on the manuscripts. We thank Maxim Iorsh who carefully prepared the volume for publication. Finally, we thank all our colleagues who advised and encouraged us in the course of organizing the program and preparing this volume for publication.

Robert Brooks was born on September 16, 1952 and passed away on September 5, 2002. He received his PhD from Harvard in 1977 under the guidance of Raoul Bott. Having completed his postdoctoral studies at the State University of New York at Stony Brook, Robert Brooks became an assistant professor at the University of Maryland (1979-84). He went on to become an associate (1985-88) and later a full professor (1988-1997) at the University of Southern California. In 1995 Brooks immigrated to Israel and became a professor at the Technion - Israel Institute of Technology.

Known to his friends as Bob, Robert Brooks was a dear and beloved colleague. He was an outstanding mathematician whose mathematics touched a number of different fields, such as Global Analysis, Spectral Theory, the theory of Riemann Surfaces, Riemannian and Discrete Geometry, and Number Theory. A survey of Brooks' mathematical work has been kindly written for this volume by his close colleague Peter Buser. The wide range of mathematical interests represented by those who attended Brooks' memorial conference and workshop is a testament to the breadth and depth of his mathematical work: in these proceedings you will find both a work on such analytic topics as Szegő's theorem and a geometric work on isoperimetric inequalities and symmetries of manifolds.

Bob Brooks will be sorely missed by the mathematical community. His works and ideas will live on for years to come.

Israel Mathematical Conference Proceedings (IMCP)

Israel Mathematical Conference Proceedings (IMCP) is a publication, part of the Contemporary Mathematics Series, devoted to the proceedings of conferences, symposia and seminars. Collections of papers focusing on a certain subject will also be published. Prospective volumes may be submitted to any member of the editorial board. Each volume has an editor (or editors) responsible for its preparation. In order to ensure inexpensive and timely distribution, authors are requested to submit to the Editor of the volume an electronic \TeX file of their manuscript in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$, using the Contemporary Mathematics style file which can be downloaded at <http://www.ams.org/tex/author-info.html>. This volume contains articles based on talks given at the Robert Brooks Memorial Conference on Geometry and Spectral Theory and the Workshop on Groups, Geometry and Dynamics held at Technion—the Israel Institute of Technology (Haifa).

Robert Brooks' (1952–2002) broad range of mathematical interests is represented in the volume, which is devoted to various aspects of global analysis, spectral theory, the theory of Riemann surfaces, Riemannian and discrete geometry, and number theory. A survey of Brooks' work has been written by his close colleague, Peter Buser.

Also included in the volume are articles on analytic topics, such as Szegő's theorem, and on geometric topics, such as isoperimetric inequalities and symmetries of manifolds.

The book is suitable for graduate students and researchers interested in various aspects of geometry and global analysis.
