Preface

A workshop celebrating Jean-Pierre Gossez's 65th anniversary was organized on September 2, 3 and 4, 2009. This meeting was attended by around 80 young and senior researchers. As usual in such occasions, it was mainly a good opportunity to gather old friends and for the youngest to make new contacts. The atmosphere was warm and very friendly, fruitful for an excellent workshop with beautiful lectures and many interesting and inspiring scientific discussions. The 16 lecturers were Henri Berestycki, Djairo G. de Figueiredo, François de Thélin, Pavel Drábek, Jesús Hernández, Bernd Kawohl, Pierre-Louis Lions, Jean Mawhin, Petru Mironescu, Mark Peletier, Frédéric Robert, Julio Daniel Rossi, Bernhard Ruf, Michael Struwe, Charles Stuart and Juan Luis Vázquez.

We would like to express our gratitude to the participants and the lecturers, to the persons who helped in the organization of the meeting and to the following institutions that supported the conference : Fonds de la recherche scientifique (F.R.S.-FNRS), Gouvernement de la Région de Bruxelles-Capitale, Académie Universitaire Wallonie-Bruxelles, European Science Foundation, International Mathematical Union, International Solvay Institutes Brussels, Faculté SOCO, Faculté des Sciences and Solvay Brussels School of Economics and Management.

We offer our thanks to the contributors to this volume and to the AMS for giving us the possibility to publish it in the Contemporary Mathematics Series. The efficient help of Christine Thivierge was greatly appreciated.

The Editors

Jean-Pierre Gossez's short bio

Jean-Pierre Gossez was born in Mons (Belgium) the 28th of November 1943. He graduated at the Université Libre de Bruxelles (ULB) in 1965 in Mathematical Sciences, then spent three years in Paris under the supervision of Jacques-Louis Lions and took his Ph.D. at the ULB in 1969 under the direction of Théophile Lepage. Later he was successively postdoctoral researcher at the Fonds National de la Recherche Scientifique, research associate at the University of Chicago and chargé de cours at the ULB. Since 1979, he has been Professeur ordinaire at the ULB where he taught analysis and general mathematics to undergraduate students and the theory of partial differential equations at the graduate level. He is Professeur émérite at the ULB since October 1st, 2009.

His research is mainly concerned with the theory of elliptic PDEs. At first, he studied monotone operators in Orlicz-Sobolev spaces and their applications to nonlinear boundary value problems. Then he took an active interest in nonlinear resonance problems. He considered non resonance conditions at various eigenvalues, problems with asymmetric nonlinearities, the Fučík spectrum,... for the Laplacian and the p -Laplacian. Fifteen years ago, he got interested in the antimaximum principle, first for the p -Laplacian, then for semilinear and quasilinear problems with weights. His research on the antimaximum principle lead him to consider some minimax formulas for the principal eigenvalues, and more recently he investigated non selfadjoint elliptic problems.

He has been involved in cooperation programmes with North-Africa and Latin-America. He is member of the Commission for Development and Exchange and of the committee "Developping Countries Strategic Group" of the International Mathematical Union.

List of Participants

For a complete list of titles in this series, visit the
AMS Bookstore at www.ams.org/bookstore/.

This volume contains papers on semi-linear and quasi-linear elliptic equations from the workshop on Nonlinear Elliptic Partial Differential Equations, in honor of Jean-Pierre Gossez's 65th birthday, held September 2–4, 2009 at the Université Libre de Bruxelles, Belgium.

The workshop reflected Gossez's contributions in nonlinear elliptic PDEs and provided an opening to new directions in this very active research area. Presentations covered recent progress in Gossez's favorite topics, namely various problems related to the p -Laplacian operator, the antimaximum principle, the Fučík Spectrum, and other related subjects. This volume will be of principle interest to researchers in nonlinear analysis, especially in partial differential equations of elliptic type.
