## Contents

Preface	vii
Separation Conditions for Iterated Function Systems with Overlaps QI-RONG DENG, KA-SING LAU, and SZE-MAN NGAI	1
$k$ -point Configurations of Discrete Self-Similar Sets DRISS ESSOUABRI and BEN LICHTIN	21
Fractal Complex Dimensions, Riemann Hypothesis and Invertibility of the Spectral Operator HAFEDH HERICHI and MICHEL L. LAPIDUS	51
Analysis and Geometry of the Measurable Riemannian Structure on the Sierpiński Gasket NAOTAKA KAJINO	91
A Survey on Minkowski Measurability of Self-Similar and Self-Conformal Fractals in $\mathbb{R}^d$ SABRINA KOMBRINK	135
Minkowski Measurability and Exact Fractal Tube Formulas for $p$ -Adic Self-Similar Strings MICHEL L. LAPIDUS, LŨ' HÙNG, and MACHIEL VAN FRANKENHUIJSEN	161
Minkowski Measurability Results for Self-Similar Tilings and Fractals with Monophase Generators MICHEL L. LAPIDUS, ERIN P. J. PEARSE, and STEFFEN WINTER	185
Multifractal Analysis via Scaling Zeta Functions and Recursive Structure of Lattice Strings ROLANDO DE SANTIAGO, MICHEL L. LAPIDUS, SCOTT A. ROBY, and JOHN A. ROCK	205
Box-Counting Fractal Strings, Zeta Functions, and Equivalent Forms of Minkowski Dimension MICHEL L. LAPIDUS, JOHN A. ROCK, and DARKO ŽUBRINIĆ	239
Hausdorff Dimension of the Limit Set of Countable Conformal Iterated Function Systems with Overlaps EUGEN MIHAILESCU and MARIUSZ URBAŃSKI	273

Multifractal Tubes: Multifractal Zeta-Functions, Multifractal Steiner Formulas and Explicit Formulas LARS OLSEN	291
Laplacians on Julia Sets III: Cubic Julia Sets and Formal Matings CALUM SPICER, ROBERT S. STRICHARTZ, and EMAD TOTARI	327
Lipschitz Equivalence of Self-Similar Sets: Algebraic and Geometric Properties HUI RAO, HUO-JUN RUAN, and YANG WANG	349
Riemann Zeros in Arithmetic Progression MACHIEL VAN FRANKENHUIJSEN	365
Curvature Measures of Fractal Sets MARTINA ZÄHLE	381

## Preface

The Contemporary Mathematics volume

*Fractal Geometry and Dynamical Systems in Pure and Applied  
Mathematics I: Fractals in Pure Mathematics*

contains papers from talks given at three conferences in 2011–2012, following the passing of Benoît Mandelbrot (widely regarded as the father of fractal geometry) in October of 2010. These meetings are described in chronological order below.

On the occasion of the 2011 Anassilaos International Research Prize in Mathematics, awarded to Michel L. Lapidus (University of California, Riverside), the Permanent International Session of Research Seminars (PISRS) held its first International Meeting

PISRS 2011: Analysis, Fractal Geometry, Dynamical Systems  
and Economics.

The conference was held on November 8–12, 2011, at the University of Messina in Sicily, Italy, and was attended by experts in the fields of Fractal Geometry, Dynamical Systems, Number Theory, Noncommutative Geometry, Mathematical and Theoretical Physics, as well as Economics. In addition to approximately 40 experienced researchers participating, the conference included more than 150 students, professors and experts following and attending the meeting. The Award Ceremony for Michel Lapidus took place in Reggio Calabria on Saturday, November 12. The Scientific Committee of PISRS includes over 50 professors and scholars from more than 25 outstanding universities around the world. It has several branches, including Applied Functional Analysis; Biomathematics; Decision and Game Theory; Differential, Fractal and Noncommutative Geometry; Mathematical Methods of Economics, Finance and Quantum Mechanics; Mathematical Physics and Dynamical Systems. The Chairman of PISRS is David Carfi.

The 2012 AMS/MAA/SIAM Joint Mathematics National Meeting, held in Boston in January 2012, included an AMS Special Session on “Fractal Geometry in Pure and Applied Mathematics” in memory of Benoît Mandelbrot. Its organizers were Michel Lapidus, Erin Pearse and Machiel van Frankenhuysen. In five sessions (including sessions comprised of primarily applied topics), researchers from around the world presented their work in various areas of fractal mathematics. An entire session was devoted to the applications to Physics, Biology, Engineering and Computer Science. During one of the breaks, an experiment was performed which demonstrated the capabilities of fractal antennas. Many speakers described ways in which their work was influenced by the work of Benoît Mandelbrot, and a

special dinner was organized in his honor. Several talks were attended by Aliette Mandelbrot, Benoît's widow, who also gave a short but touching speech.

The Spring 2012 Meeting of the AMS Western Section, held in Honolulu, Hawaii, at the University of Hawaii at Manoa, included a Special Session on "Geometry and Analysis on Fractal Spaces". Its organizers were Michel Lapidus, Lü' Hùng, John Rock and Machiel van Frankenhuijsen. In four sessions, researchers from around the world presented their work in various areas of fractal mathematics.

This is a collection of papers on fractal geometry (and some aspects of dynamical systems) in pure mathematics. It features articles discussing a variety of connections between these subjects and other fields of mathematics, including probability theory, number theory, geometric measure theory, partial differential equations, global analysis on nonsmooth spaces, harmonic analysis and spectral geometry.

These proceedings were conceived as a means of collecting some of the most recent developments in this active area of research, and also to bring together several survey and research expository articles, as a means of introducing new researchers and graduate students to the forefront of the field. The present volume focuses on the more mathematical aspects of the field. Its companion volume, entitled *Fractal Geometry and Dynamical Systems in Pure and Applied Mathematics II* and subtitled *Fractals in Applied Mathematics*, focuses on more applied topics, including the applications of fractal geometry and dynamical systems to other sciences.

David Carfi,  
Michel L. Lapidus,  
Erin P. J. Pearse, and  
Machiel van Frankenhuijsen.

March 2013

Acknowledgements: The editors wish to acknowledge the support of the National Science Foundation (via M. L. Lapidus' NSF grants DMS-0707524 and DMS-1107750) towards the preparation of these proceedings and especially towards the travel and/or stay of several of the participants in the three conferences that gave rise to these proceedings.

This volume contains the proceedings from three conferences: the PISRS 2011 International Conference on Analysis, Fractal Geometry, Dynamical Systems and Economics, held November 8–12, 2011 in Messina, Italy; the AMS Special Session on Fractal Geometry in Pure and Applied Mathematics, in memory of Benoît Mandelbrot, held January 4–7, 2012, in Boston, MA; and the AMS Special Session on Geometry and Analysis on Fractal Spaces, held March 3–4, 2012, in Honolulu, HI.

Articles in this volume cover fractal geometry (and some aspects of dynamical systems) in pure mathematics. Also included are articles discussing a variety of connections of fractal geometry with other fields of mathematics, including probability theory, number theory, geometric measure theory, partial differential equations, global analysis on non-smooth spaces, harmonic analysis and spectral geometry.

The companion volume (Contemporary Mathematics, Volume 601) focuses on applications of fractal geometry and dynamical systems to other sciences, including physics, engineering, computer science, economics, and finance.
