Proximal Point Algorithms for Finding Zeros of Maximal Monotone Operators in the Presence of Computational Errors A. J. ZASLAVSKI	249

Preface

A research workshop on Infinite Products of Operators and Their Applications took place at the Technion-Israel Institute of Technology, Haifa, Israel, on May 21–24, 2012. This workshop was organized and sponsored by the Center for Mathematical Sciences (CMS) at the Technion, with additional support from the Israel Science Foundation. The organizing committee was comprised of Simeon Reich (Technion) and Alexander J. Zaslavski (Technion). The workshop brought together a select group of over two dozen experts from four continents. The research workshop was devoted to various issues and open problems regarding infinite products of operators and their applications such as approximation theory, computed tomography, feasibility problems, generic convergence of algorithms, image recovery, optimization theory, population biology and the influence of computational errors.

This volume is the tangible record of this workshop. Most of the papers assembled here have been contributed by participants in the workshop. In some cases, they have chosen to submit manuscripts which depart from the texts of their lectures. Several invited speakers who were unable to attend the workshop also contributed papers to these proceedings. All submissions have been carefully refereed and revised whenever necessary.

The papers collected in this volume cover many different topics concerning infinite products of operators and their applications: projection methods for solving feasibility and best approximation problems, arbitrarily slow convergence of sequences of linear operators, monotone operators, proximal point algorithms for finding zeros of maximal monotone operators in the presence of computational errors, the Pascoletti-Serafini problem, remetrization for finite families of mappings, Poisson's equation for mean ergodic operators, vector-valued metrics in fixed point theory, contractivity of infinite products and mean convergence theorems for generalized nonspreading mappings.

The Editors

Conference Program

Monday, 21 May

- 09:00-09:50 Frank Deutsch
Arbitrarily slow convergence of sequences of linear operators
- 09:55-10:45 Roger Nussbaum
The cone spectral radius, positive eigenvectors and Hausdorff dimension
- 11:00-11:50 Roman Polyak
Nonlinear equilibrium for optimal resources allocation
- 11:55-12:45 Jacek Jachymski
Some results on infinite products of operators involving the notion of joint spectral radius
- 14:10-15:00 Ronald Bruck
Optimal constants for iterating monotone operators in Hilbert space using semi-definite programming
- 15:30-16:20 Jon Borwein
Optimization techniques for inverse problems

Tuesday, 22 May

- 09:00-09:50 Heinz Bauschke
Fixed point theory and monotone operator theory
- 09:55-10:45 Amir Beck
Sparsity constrained nonlinear optimization: optimality conditions and algorithms
- 11:00-11:50 Tadeusz Kuczumow
Theorems of Denjoy-Wolff type for a family of k_D -nonexpansive retracts
- 11:55-12:45 Adi Ben-Israel
Product integrals of matrices
- 14:00-14:50 Andrzej Cegielski
Methods for the variational inequality problem over the intersection of fixed point sets of quasi-nonexpansive operators
- 14:55-15:45 Yair Censor
Using feasibility-seeking methods for superiorization
- 16:00- 16:50 Adrian Petrusel
Vector-valued metrics in fixed point theory
- 16:55-17:45 Shawn Wang
Restricted normal cones and the method of alternating projections
- 17:50- 18:40 Adam Paszkiewicz
On the Amemiya-Ando conjecture

Thursday, 24 May

- 09:00-09:50 Jon Borwein
Recent progress in maximal monotone operator theory
- 09:55-10:45 Fran Aragon
Global convergence of a non-convex Douglas-Rachford iteration
- 11:00-11:50 Shoham Sabach
Right Bregman nonexpansive operators in Banach spaces
- 11:55-12:45 Michael Lin
On convergence of power series of contractions
- 14:00-14:50 Evgeniy Pustyl'nik
Inclination of subspaces
- 14:55-15:45 Sedi Bartz
Families of abstract convex antiderivatives
- 16:00-16:50 Aviv Gibali
The split variational inequality problem
- 16:55-17:45 Alexander J. Zaslavski
A proximal point method and a projected subgradient method in the presence of computational errors

List of Participants

Fran Aragon
University of Newcastle, Australia

Sedi Bartz
The Technion – Israel Institute of
Technology, Israel

Heinz Bauschke
University of British Columbia, Canada

Amir Beck
The Technion – Israel Institute of
Technology, Israel

Adi Ben-Israel
Rutgers University, USA

Jon Borwein
University of Newcastle, Australia

Ronald Bruck
University of Southern California, USA

Monika Budzynska
UMCS, Lublin, Poland

Andrzej Cegielski
University of Zielona Góra, Poland

Yair Censor
University of Haifa, Israel

Frank Deutsch
Pennsylvania State University, USA

Aviv Gibali
The Technion – Israel Institute of
Technology, Israel

Jacek Jachymski
Technical University of Lodz, Poland

Tadeusz Kuczumow
UMCS, Lublin, Poland

Michael Lin
Ben-Gurion University, Israel

Published Titles in This Subseries

Israel Mathematical Conference Proceedings (IMCP) is a publication, part of the Contemporary Mathematics Series, devoted to the proceedings of conferences, symposia and seminars. Collections of papers focusing on a certain subject will also be published. Prospective volumes may be submitted to any member of the editorial board. Each volume has an editor (or editors) responsible for its preparation. In order to ensure inexpensive and timely distribution, authors are requested to submit to the Editor of the volume an electronic $\text{T}_\text{E}\text{X}$ file of their manuscript in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-L}\text{T}_\text{E}\text{X}$, using the Contemporary Mathematics style file which can be downloaded at <http://www.ams.org/tex/author-info.html>. For further information, contact the Managing Editor, IMCP, Department of Mathematics, Bar-Ilan University, Ramat-Gan 52900, Israel; e-mail: rowen@macs.biu.ac.il.

This volume contains the proceedings of the workshop on Infinite Products of Operators and Their Applications, held from May 21–24, 2012, at the Technion-Israel Institute of Technology, Haifa, Israel.

The papers cover many different topics regarding infinite products of operators and their applications: projection methods for solving feasibility and best approximation problems, arbitrarily slow convergence of sequences of linear operators, monotone operators, proximal point algorithms for finding zeros of maximal monotone operators in the presence of computational errors, the Pascoletti-Serafini problem, remetrization for infinite families of mappings, Poisson's equation for mean ergodic operators, vector-valued metrics in fixed point theory, contractivity of infinite products and mean convergence theorems for generalized nonspreading mappings.
