An adequate and thorough preparation for the calculus and applied mathematics is provided in

SMITH AND GALE'S

New Analytic Geometry

342 pages, $1.50

Some of the distinctive features are the simplicity, the numerous tables, the large number of tested problems and the omission of answers to these when any useful purpose is served, the attention given to curve plotting, a chapter on the setting up and graphical study of functions arising from concrete problems, the concise treatment of the parabola, ellipse, and hyperbola, the expression of the simpler formulas in determinant form, the variety of locus problems, the attention paid to the careful sketching of loci in space, and a chapter on the derivation of empirical equations to fit observed date.
