BOOK REVIEWS

BRIEF MENTION

Ed. by the Unione Matematica Italiana with the assistance of the Consiglio Nazionale delle Ricerche. Rome, Cremonese, 1953. 4+327 pp. 3000 lire.

For the two parts of vol. 1 cf. this Bulletin vol. 59, p. 416; vol. 60, p. 288.

Tables of circular and hyperbolic sines and cosines for radian arguments.

This is a third edition of MT3 of the New York Mathematical Tables Project, first published in 1939.

Functions tabulated: trigonometric and hyperbolic, exponential and logarithmic, Bessel, Thomson, elliptic integrals, erf, Fresnel integrals, Ei, Si, Ci, Γ.

Simultaneous linear equations and the determination of eigenvalues.

This volume contains, in 19 papers, the proceedings of a symposium held in 1951.

This is a rearrangement of J. Dodson’s Antilogarithmic Canon (London, 1742), giving 10 decimal places at interval 0.00001.

This is reissue of MT 10 of the New York Mathematical Tables Project, originally issued in 1941.
