IN TOUCH WITH NEW WORLDS

Another project of IBM Applied Scientists: helping solve Einstein's Two-Body Problem

Helping to increase man's understanding and control of reality is a job of IBM Applied Science Representatives. Project by project, through unique and creative applications of data processing, they are changing the worlds of engineering, the sciences, and business.

IBM Applied Scientists are even helping illuminate the fundamental mysteries of space and matter. They are working with mathematicians in an attempt to solve Einstein's field equations for the Two-Body Problem, using an IBM computer.

Others are working on industrial process control, linear and non-linear programming, operations research, and design analysis. The variety of projects is limitless.

You may play an important part in this challenging profession. There are openings in many cities for men and women with advanced degrees in engineering, mathematics, or a physical science, or a degree in one of these areas plus a Master's in business administration or experience in programming.

For a confidential interview, please call any IBM Branch Office or one of these Regional Managers of Applied Science:

IBM DATA PROCESSING DIVISION
Applied Mathematicians and Computer Programmers to Participate in Advanced Space Programs

The Missile and Space Vehicle Department of General Electric—a recognized leader in the development of instrumented re-entry vehicles—is now pursuing a number of even more advanced space programs. Basic to progress in these programs is the solution of a diversity of interesting mathematical problems. These include trajectory and navigation studies and analysis of flight telemetry data and space communications.

**APPLIED MATHEMATICIANS.** The applied mathematics group provides consulting services to our entire engineering staff. Salary and professional growth are given corresponding emphasis. Desirable experience and background would include strong analytical ability, extensive knowledge of advanced techniques in numerical analysis for computers, and experience in mathematical investigations on advanced engineering programs. MS or PhD in Mathematics or Theoretical Physics required.

*Diversified Positions for:*

**SENIOR DIGITAL COMPUTER PROGRAMMERS.**
As Senior Programmers at the Missile & Space Vehicle Department you will have all the advantages of an extensive computer facility which centers around an IBM 7090. The work covers analysis and programming for technical data systems, flight test data systems and advanced space programs. Requirements include ability to direct junior programmers, a BS or advanced degree, minimum of 2 years experience on a large scale, binary computer.

**ANALOG COMPUTER PROGRAMMERS.** BSEE, Physics or Math degree required. Will plan sequence of computer operation, determine the circuitry for engineering problems, set up and operate computer. The work is in a growing analog facility which includes Electronic Associates and Reeves Analog Equipment, a combined Analog-Digital Facility and a passive element analog computer.

For further information regarding opportunities here, write Mr. D. G. Curley, Div. 123-MK

SYSTEM COST ANALYSTS

The MITRE Corporation is an independent system engineering organization engaged in the design, development and evaluation of all types of large-scale computer-based command and control systems.

As an integral part of this broad scope of activities, MITRE has recently established a Cost Analysis Office. This Office performs system cost analysis and cost effectiveness studies as part of MITRE's system design and engineering responsibility.

Immediate appointments to the Technical Staff are available to candidates with experience in cost analysis, system engineering or military materiel management. The level of the positions requires formal training in the engineering or physical sciences and an advanced degree in Business Administration or Economics.

The positions are located at MITRE's modern facilities in Suburban Boston, Massachusetts.

POST OFFICE BOX 208, 3MM — BEDFORD, MASSACHUSETTS
"It is likely to become the standard work for some time"

**COMMUTATIVE ALGEBRA**

by OSCAR ZARISKI, Professor of Mathematics, Harvard University, and PIERRE SAMUEL, Professor of Mathematics, University of Clermont-Ferrand

**Volume I**

*1958, 329 pages, $6.95*

Volume II of Zariski and Samuel's *Commutative Algebra* completes the first systematic study of the subject in over two decades. We are convinced that, like its predecessor, it will earn warm praise such as the above excerpt from the *Matrix and Tensor Quarterly*. Here are some additional comments on Volume I: "The book is clearly written, presenting in a sophisticated comprehensive way a connected body of material, much of which was not previously available in book form. The index of definitions alone would be sufficient to persuade this reviewer to recommend to every mathematician that he include *Commutative Algebra* in his reference library."

D. A. Norton in *American Mathematical Monthly*. "The authors set out to fill a void in the mathematical literature. They have done this admirably." I. N. Herstein in *Bulletin of the American Mathematical Society*. "The book is a pleasure to read and its many valuable features will ensure its use both to the specialist and to the beginner needing an introductory text in this field." A. W. Goldie in *The Mathematical Gazette*.

**Volume II**

*1960, 432 pages, $7.75*

Three equally distinguished 1960 additions to the UNIVERSITY SERIES IN HIGHER MATHEMATICS

**RINGS OF CONTINUOUS FUNCTIONS**, by Leonard Gillman, *Chairman of the Mathematics Department, University of Rochester*, and Meyer Jerison, *Professor of Mathematics, Purdue University*. 304 pages, $8.75

**PROBABILITY THEORY**, 2nd ed., by Michel Loève, *Professor of Mathematics and Statistics, University of California (Berkeley)*. 684 pages, $14.75

**GENERAL THEORY OF BANACH ALGEBRAS**, by Charles E. Rickart, *Chairman of the Mathematics Department, Yale University*. 400 pages, $10.50

*D. Van Nostrand Company, Inc.*

120 Alexander Street

Princeton, New Jersey
Industrial Dynamics, General Offices, has several openings for professional mathematicians who have acquired experience in analyzing business information problems or in the decision making processes of management. Prior experience may be in mathematics, data processing, operations analysis, operations research, statistics or engineering. Candidates must have at least a B.S. or B.A. degree in Math, Physics, Business Statistics, or Engineering Sciences. Background should include familiarity with computer programming and usage.

Duties will involve the design of information systems to aid engineering management, development of mathematical models to facilitate control of costs, or the development of a better basis for the decision making processes through the use of operations research techniques in the several divisions of the company.

If you are interested and believe that you can contribute please airmail your resume to:

MEMOIR 34
SPACES WITH NON-SYMMETRIC DISTANCE
by
E. M. Zaustinsky
This Memoir treats Finsler spaces, without the assumption of a symmetric distance, by the geometric methods developed by Busemann. One would have expected that the suppression of the hypothesis that the distance be symmetric would entail the loss of most of the theory; we have the very surprising result, however, that nearly every theorem of the symmetric theory (so far attempted) which can be formulated at all without this assumption holds without this assumption. Among the topics treated are the one-dimensional spaces, the theory of perpendiculars and parallels, the determination of the two-dimensional spaces with transitive groups of motions, and spaces with non-positive curvature.

SOVIET MATHEMATICS

**DOKLADY**
A Translation of all the Pure Mathematics Sections of Doklady Akademii Nauk SSSR

The total number of pages of the Russian journal to be translated in 1960 will be about 1600. All branches of Pure Mathematics are covered in the DOKLADY in short articles which provide a comprehensive, up-to-date report of what is going on in Soviet mathematics.

ANNOUNCING! — A NEW MAGAZINE!!

Recreational Mathematics Magazine

Devoted to discussions of lighter mathematical topics, brain teasers, numerical curiosities, games, puzzles, logic problems, paper folding, etc. Bi-monthly publication to start FEBRUARY 1961 at 65¢ per issue or subscription rates of $3.50 a year for the general public and $3.00 a year for teachers, students, and libraries.

Subscribe now and be billed in February 1961 or enclose payment now and receive an extra issue for each year's subscription. Also, every subscriber you obtain earns you a FREE issue, every five earns you a FREE YEAR'S SUBSCRIPTION. Include your name with the new subscribers.

Material is needed and will receive payment upon publication. Please inquire separately for manuscript requirements, suggested topics and payment information.

Use the coupon below or a postcard with the requested information.

THE AMERICAN MATHEMATICAL SOCIETY
respectfully invites and deeply appreciates
BEQUESTS AND OTHER CAPITAL GIFTS

A legacy or other capital gift to the American Mathematical Society is an effective contribution to the advancement of mathematical research. Investment income provides essential support for the activities of the Society, and most of it is derived from gifts and bequests which have been made over the years by persons interested in mathematics.

It is the policy of the Society to recognize a donor by attaching his name, or any other name specified by him as a memorial, to the fund given by him or to the activity supported by the fund. Gifts and bequests to the Society are deductible for income, gift, and state tax purposes.

FINITE—DIFFERENCE METHODS FOR
PARTIAL DIFFERENTIAL EQUATIONS

By George E. Forsythe, Stanford University, and Wolfgang R. Wasow, University of Wisconsin. This book considers the more important aspects of finite-difference methods. The authors are as thorough as possible in their coverage without striving for completeness—an impossible objective in a subject of such rapid development. While they do not assume much knowledge of partial differential equations, some familiarity with calculus is required. 1960. 444 pages. $11.50.

STATISTICAL THEORY AND METHODOLOGY
IN SCIENCE AND ENGINEERING

By K. Alexander Brownlee, The University of Chicago. Designed partly for students in the experimental sciences and partly for statistics majors, the main objective of this book is to give both groups facility and self-confidence in the actual use of statistical methods. For this purpose, the author presents an understanding of principles rather than practice. 1960. 570 pages. $16.75.*

STATISTICAL THEORY
OF COMMUNICATION

By Y. W. Lee, Massachusetts Institute of Technology. This book is based on the author's own experience gained through years of research work and teaching, and on the work of Norbert Wiener. It is an introductory book. The object of the text is to present clearly and rigorously a physically motivated and systematic account of the statistical theory of communication—an account that includes essentially all of the basic elements. Statistical filtering and prediction theory, correlation theory, and generalized harmonic analysis are among the topics given an especially lucid treatment by the author. 1960. 509 pages. $16.75.*

DIGITAL COMPUTERS AND
NUCLEAR REACTOR CALCULATIONS

By Ward C. Sangren, General Dynamics Corporation. The author has chosen to discuss completely one small reactor calculation, and briefly consider a number of representative types of calculations. Through this method of presentation, he is able to convey the essence of high speed reactor calculations within this one volume. The examples given are of typical reactor calculations which have arisen in the design of actual reactors. 1960. 208 pages. $8.50.

*Textbook edition also available for college adoption.

Journals Published by the American Mathematical Society

Bulletin of the American Mathematical Society

This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, research problems and a department of research announcements.

The subscription prize is $7.00 per annual volume of six numbers.

Research Problems and Invited Addresses offered for publication should be sent to WALTER RUDIN, Department of Mathematics, University of Wisconsin, Madison, Wisconsin; Book Reviews to FELIX BROWDER, Department of Mathematics, Yale University, New Haven, Connecticut. Research Announcements offered for publication should be sent to some member of the Council of the Society, and communicated by him to E. E. MOISE, Department of Mathematics, Harvard University, Cambridge 38, Massachusetts. All other communications to the editors should be sent to the Managing Editor, E. E. MOISE.

Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics and is devoted principally to the publication of original papers of moderate length.

The subscription price is $11.00 per annual volume of six numbers.

Papers in algebra and number theory should be sent to ALEX ROSENBERG, Lunt Building, Northwestern University, Evanston, Illinois; in probability, real variables, logic and foundations to P. R. HALMOS, Eckhart Hall, University of Chicago, Chicago 37, Illinois; in abstract analysis to either P. R. HALMOS or ALEX ROSENBERG; in geometry and topology to HANS SAMELSON, Institute for Advanced Study, Princeton, New Jersey; in other branches of analysis, applied mathematics, and all other fields to R. P. Boas, Lunt Building, Northwestern University, Evanston, Illinois. All other communications to the editors should be addressed to the Managing Editor, P. R. HALMOS.

Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than the PROCEEDINGS.

Four volumes of three numbers each will be published in 1960. The subscription price is $8.00 per volume.

Papers in analysis, applied mathematics and probability should be sent to LIPMAN BERS, Institute of Mathematical Sciences, New York University, New York, New York; in topology to W. S. MASSEY, Department of Mathematics, Yale University, Box 2155, Yale Station, New Haven, Connecticut; in algebra, number theory, and logic to G. P. HOCHSCHILD, Department of Mathematics, University of California, Berkeley 4, California; in geometry and abstract analysis to I. M. SINGER, Department of Mathematics, Massachusetts Institute of Technology, Cambridge 39, Massachusetts. All other communications to the editors should be addressed to the Managing Editor, LIPMAN BERS.
Journals Published by the
American Mathematical Society

Soviet Mathematics—Doklady

This journal contains the entire pure mathematics section of the DOKLADY AKADEMII NAUK SSSR in translation. It appears six times a year, each bimonthly issue corresponding to one volume of the Soviet DOKLADY. (The DOKLADY AKADEMII NAUK SSSR is issued three times a month, six issues constituting a volume.)

Rates per annual volume are as follows: Domestic subscriptions, $17.50; foreign subscriptions, $20.00. Single issues are $5.00.

Mathematical Reviews

This journal contains abstracts and reviews of the current mathematical literature of the world. It is sponsored by thirteen mathematical organizations, located both in the United States and abroad.

MATHEMATICAL REVIEWS is published monthly, excepting July. The subscription price is $50.00 per annual volume of eleven numbers.

Notices of the American Mathematical Society

This journal announces the programs of the meetings of the Society. It carries the abstracts of all contributed papers presented at the meetings of the Society and publishes news items of interest to mathematical scientists.

The subscription price is $7.00 per annual volume of 7 numbers. A single copy is $2.00.

All communications should be addressed to the Editor G. L. WALKER, 190 Hope Street, Providence 6, Rhode Island. News items and insertions for each issue must be in the hands of the editor on or before the deadline for the abstracts for the papers to be presented in the meetings announced in that issue. These deadlines are published regularly on the back of the title page.

Memoirs of the
American Mathematical Society

This is a series of paperbound research tracts which are of the same general character as papers published in the TRANSACTIONS. An issue contains either a single monograph or a group of cognate papers. Published at irregular intervals. The latest numbers in this series are:

29. Edward Halpern, Twisted polynomial hyperalgebras. 61 pp. 1958  $1.50
30. L. Auslander and L. Markus, Flat Lorentz 3-manifolds. 60 pp. 1959  2.00
31. W. S. Loud, Periodic solutions of $x'' + cx' + g(x) = ef(t)$. 58 pp. 1959  2.00
32. R. S. Pierce, Translation lattices. 66 pp. 1959  1.70
33. Ernst Snapper, Cohomology theory and algebraic correspondences. 96 pp. 1959. 1.90
34. E. M. Zaustinsky, Spaces with non-symmetric distance. 91 pp. 1959. 2.00

GEORGE BANTA COMPANY, MENASHA, WISCONSIN, U.S.A.
