CONCEPTION...DESIGN
...and EVALUATION

of command and control systems

This is MITRE's task as consultant to the Air Force Electronics Systems Division. MITRE, an independent nonprofit organization applies the growing resources of modern technology to a broad spectrum of system engineering problems.

Helping to provide the decision-maker with command and control systems that are technically compatible is one aspect of MITRE's work. Another is planning the aerospace control environment of the future.

In its system design work, MITRE conducts research and development as required, but does not engage in production. As a technical advisor to the Air Force, MITRE works in close liaison, but not in competition, with industry and other scientific groups.

Outstanding engineers and scientists interested in working on technical problems vital to the national security are invited to contact MITRE. There are openings in the following areas:

- Operations Research
- Radar Systems & Techniques
- System Analysis
- Advanced System Design
- Communications
- Air Traffic Control System Development
- Econometrics
- Computer Technology
- Human Factors
- Mathematics

Openings are also available at MITRE's facility in Montgomery, Alabama.

Inquiries may be directed in confidence to
Vice President — Technical Operations

THE
MITRE CORPORATION
Post Office Box 208, 3-MU — Bedford, Massachusetts

All qualified applicants will receive consideration for employment without regard to race, creed, color or national origin.

A brochure more fully describing MITRE and its activities is available upon request
The first two volumes in the Statistical Research Monographs series sponsored by the Institute of Mathematical Statistics and the University of Chicago

The Passage Problem for a Stationary Markov Chain

By J. H. B. Kemperman. Presents systematically a number of methods useful in studying the problems of first passage and absorption in a Markov chain; in particular, methods for obtaining exact formulae for the probabilities under consideration or their moments. Numerous illustrations show adequately how each method serves as a natural tool for handling a large number of practical problems. 127 pages. $5.00

Statistical Inference for Markov Processes

By Patrick Billingsley. A general mathematical theory for the statistical problems of determining whether mathematical models fit empirical data and of estimating any parameters upon which the models may depend. The applications which illustrate the mathematical results make the book useful to workers in the applied fields as well as to mathematicians, statisticians, and graduate students in statistics. 75 pages. $4.00

And other titles of interest

Modern Factor Analysis

By Harry H. Harman. Designed to serve the interests of graduate students and researchers in statistics, psychology, and related disciplines, this study presents an accurate, up-to-date account of factor analysis from its basic foundations through the latest and most advanced methods, including the use of high-speed electronic computers. 1960. 480 pages. $10.00

An Introduction to the Theory of Experimental Design

By D. J. Finney. A book for the mathematician, statistician, and mathematically orientated scientist. In emphasizing that the success of an experiment depends primarily on the choice of design, this manual offers a comprehensive survey of the principles, problems, and both classical and newly discovered techniques of experimental design. 1960. 232 pages. $7.00

UNIVERSITY OF CHICAGO PRESS
5750 Ellis Avenue, Chicago 37, Illinois
Journals Published by the
American Mathematical Society

Bulletin of the American Mathematical Society

This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, research problems and a department of research announcements.

The subscription prize is $7.00 per annual volume of six numbers.

Research Problems and Invited Addresses offered for publication should be sent to WALTER RUDIN, Department of Mathematics, University of Wisconsin, Madison, Wisconsin; Book Reviews to FELIX BROWDER, Department of Mathematics, Massachusetts Institute of Technology, Cambridge 39, Massachusetts. Research Announcements offered for publication should be sent to some member of the Council of the Society, and communicated by him to E. E. MOISE, Department of Mathematics, Harvard University, Cambridge 38, Massachusetts. All other communications to the editors should be sent to the Managing Editor, E. E. MOISE.

Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics and is devoted principally to the publication of original papers of moderate length. A department called Mathematical Pearls was established in 1961. The purpose of this department is to publish very short papers of an unusually elegant and polished character, for which there is normally no other outlet.

The subscription price is $11.00 per annual volume of six numbers.

Papers in algebra and number theory should be sent to ALEX ROSENBERG, Lunt Building, Northwestern University, Evanston, Illinois; in probability, real variables, logic and foundations to P. R. HALMOS, Eckhart Hall, University of Chicago, Chicago 37, Illinois; in abstract analysis to either P. R. HALMOS or ALEX ROSENBERG; in geometry and topology to E. H. SPANIER, Department of Mathematics, University of California, Berkeley, California; in other branches of analysis, applied mathematics, and all other fields to R. P. BOAS, Lunt Building, Northwestern University, Evanston, Illinois. All other communications to the editors should be addressed to the Managing Editor, P. R. HALMOS.

Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than the PROCEEDINGS.

Four volumes of three numbers each will be published in 1960. The subscription price is $8.00 per volume.

Papers in analysis and applied mathematics should be sent to LIPMAN BERS, Institute of Mathematical Sciences, New York University, New York, New York; in topology to W. S. MASSEY, Department of Mathematics, Yale University, Box 2155, Yale Station, New Haven, Connecticut; in algebra, number theory, and logic to DANIEL ZELINSKY, Department of Mathematics, Northwestern University, Evanston, Illinois; in geometry and abstract analysis to I. M. SINGER, Department of Mathematics, Massachusetts Institute of Technology, Cambridge 39, Massachusetts; in statistics and probability to MICHEL LOÈVE, Statistics Department, University of California, Berkeley, California. All other communications to the editors should be addressed to the Managing Editor, LIPMAN BERS.
Journals Published by the
American Mathematical Society

Soviet Mathematics—Doklady

This journal contains the entire pure mathematics section of the DOKLADY
AKADEMII NAUK SSSR in translation. It appears six times a year, each bimonthly
issue corresponding to one volume of the Soviet Doklady. (The Doklady Akademii
Nauk SSSR is issued three times a month, six issues constituting a volume.)
Rates per annual volume are as follows: Domestic subscriptions, $17.50; foreign
subscriptions, $20.00. Single issues are $5.00.

Mathematical Reviews

This journal contains abstracts and reviews of the current mathematical literature
of the world. It is sponsored by thirteen mathematical organizations, located both
in the United States and abroad.
MATHEMATICAL REVIEWS is published monthly. The subscription price is $50.00
per annual volume of twelve numbers. Beginning in 1962, this journal will be pub­
lished in two volumes. The subscription price of each volume will be $50.00.

Notices of the American Mathematical Society

This journal announces the programs of the meetings of the Society. It carries the
abstracts of all contributed papers presented at the meetings of the Society and pub­
lishes news items of interest to mathematical scientists.
The subscription price is $7.00 per annual volume of 7 numbers. A single copy is
$2.00.
All communications should be addressed to the Editor G. L. Walker, 190 Hope
Street, Providence 6, Rhode Island. News items and insertions for each issue must
be in the hands of the editor on or before the deadline for the abstracts for the papers
to be presented in the meetings announced in that issue. These deadlines are pub­
lished regularly on the back of the title page.

Memoirs of the
American Mathematical Society

This is a series of paperbound research tracts which are of the same general char­
acter as papers published in the Transactions. An issue contains either a single
monograph or a group of cognate papers. Published at irregular intervals. The latest
numbers in this series are:
30. L. Auslander and L. Markus, Flat Lorentz 3-manifolds. 60 pp. 1959  $2.00
31. W. S. Loud, Periodic solutions of $x'' + cx + g(x) = ef(t)$. 58 pp. 1959  2.00
32. R. S. Pierce, Translation lattices. 66 pp. 1959  1.70
33. Ernst Snapper, Cohomology theory and algebraic correspondences. 96 pp.
   1959, 1.90
34. E. M. Zaustinsky, Spaces with non-symmetric distance. 91 pp. 1959. 2.00
35. Richard Bellman and K. L. Cooke, Asymptotic behavior of solutions of
differential-difference equations. 91 pp. 1959. 2.00
37. Paul Olum, Invariants for effective homotopy classification and extension of
mappings. 60 pp. 1961  1.60
