IBM® extends the range of programming

Are you interested in exploring the capabilities of the computer?

Some of the most important programming developments are taking place now at IBM. The broad scope of work underway at IBM offers important advantages to members of our professional programming staff. They have the opportunity to work on projects taken from the broad range of programming. They are face to face with the frontiers of applied, scientific and administrative programming.

Here are some areas you might work in if you were a programmer at IBM: theory of computing . . . artificial intelligence . . . simulation systems . . . scheduling methodology . . . communications control systems . . . space systems . . . and the design of total computer systems.

At IBM, you would find yourself in the kind of atmosphere that encourages accomplishment. You would help to design new hardware systems. You would work side by side with men of eminent professional stature: scientists, engineers and mathematicians who pioneer in the research and development that make new computing systems possible.

What's more, you would be able to give your projects the time they deserve. Time for thinking. Time for achievement.

The scope of programming at IBM stimulates professional growth. It offers possibilities which merit serious consideration whether you are a master of the skills of programming or a relative newcomer to the field. Salaries and benefits at IBM are excellent. If you have experience in scientific or commercial programming, we would like to acquaint you with the wide range of responsible positions on our programming staff.

Programming facilities are located in plants and laboratories throughout the country. IBM is an Equal Opportunity Employer. For further details, please write, outlining your background and interests, to: Manager of Professional Employment, IBM Corporation, Dept. 529T, 590 Madison Ave., New York 22, N. Y.

**ILLINOIS JOURNAL OF MATHEMATICS**

A quarterly journal of basic research in pure and applied mathematics published by the University of Illinois, Urbana.

*edited by*

REINHOLD BAER • PAUL T. BATEMAN

D. G. BOURGIN • S. S. CHERN

A. H. TAUB • GEORGE W. WHITEHEAD

The subscription price is $9.00 a volume (four numbers); this is reduced to $5.00 for individual members of the American Mathematical Society. Subscriptions should be sent to the University of Illinois Press, Urbana, Illinois.

---

**VACANCY**

Head of Department of Applied Mathematics (Senior Scientist) at Tel Aviv University, Israel.

Knowledge of Hebrew an asset, but not a condition.

Write to: Academic Secretary, Tel Aviv University, 153 Herzl Street, Israel, enclosing curriculum vitae, copies of documents and list of publications.

---

**Announcing a new publication**

**SELECTED TRANSLATION SERIES II VOLUME 20**

Six papers on partial differential equations

Levitin, B. M. Koščelj, A. I.

Naimark, M. A. Landis, E. M.

Ladyženskaya, O. A. Višik, M. I.

364 pages $5.30

25% discount to members

**STOCHASTIC PROCESSES**

by Emanuel Parzen

Associate Professor of Statistics, Stanford University

A new book by Emanuel Parzen intended for the student with a knowledge only of the calculus and the concepts of elementary probability theory. The book gives examples of the wide variety of empirical phenomena for which stochastic processes provide mathematical models, and provides an introduction to the methods of probability model-building.

Professor Parzen places considerable emphasis on the applications of stochastic processes and has included an excellent spread of graded exercises. This new book will be of great interest and value to students in the physical, biological, and engineering sciences, as well as those in mathematics, and statistics.

June, 1962, 336 pages Price: $10.50

HOLDEN-DAY, INC., 728 Montgomery St., San Francisco 11, Calif.
AN IMPORTANT ANNOUNCEMENT TO
Operations Research Scientists

The world's largest and most comprehensive

Land Combat War Gaming Model

is being developed by STAG

... The U. S. Army's Strategy and Tactics Analysis Group

The Department of the Army recently established STAG to support Army operational planning and evaluation activities by war gaming and other scientific techniques, with the aid of large scale computer systems.

STAG has been assigned these specific tasks:

1. Develop a Land Combat War Gaming Model with which to test Army Plans and potential. This model will be of sufficient size, scope, and flexibility to permit war gaming of any or all phases of combat and support operations. It will be capable of handling strategic or tactical operations ranging from a single battle group or battalion up to and including the complete Theatre Army—and supporting Sea, Air and Space forces. Programmed to be run on the IBM 7090, the Land Combat War Gaming Model will be the most ambitious and far-reaching undertaking in the science of War Gaming.

2. Conduct studies of other Army problems that will respond to War Gaming techniques, and maintain liaison with other Army and Army-supported groups. One such program, nearing completion at STAG is a computer-programmed mathematical model of a Field Army Ballistic Missile Defense System (FABMDS).

3. Provide Army participation in joint exercises and technological advice and assistance to other war games groups. For example, STAG is sponsoring a War Gaming Symposium at its Bethesda, Maryland headquarters in September, 1962.

STAG headquarters is an eight-story building newly built and especially equipped to provide the environment for War Gaming. It is ideally located in the heart of Bethesda, a select residential area just outside Washington, D. C. Already functioning are IBM 1401 and 7090 systems and nearing completion is a two-story Command Control Penthouse featuring computer-generated visual display equipment, being developed especially for STAG to provide immediate information access to any part of a problem. The Red and Blue forces have monitoring equipment that allows instant two-way visual communication.

STAG is accepting applications for civilian members of numerous military-civilian-computer teams being set up within STAG to provide the military, scientific and computer integration necessary for solving those problems which lend themselves to the gaming or simulation type technique. Immediate openings exist for Operations Research Analysts, Mathematicians and Mathematical Programmers.

If you are interested in participating in the most complex and comprehensive War Gaming program ever undertaken, please contact Chief, Army General Staff Civilian Personnel Office—STAG (T), Room 3-C-674, The Pentagon, Washington 25, D. C.
MATHEMATICS OF COMPUTATION

Beginning with Volume 16, Number 7, January 1962
Published by The American Mathematical Society for the
National Academy of Sciences—National Research Council

TABLE OF CONTENTS

July 1962

Some Relations and Values for the Generalized Riemann Zeta Function
.............................................. Eldon R. Hansen and Merrell L. Patrick
Euler’s Constant to 1271 Places .................................. Donald E. Knuth
A Calculation of the Number of Lattice Points in the Circle and Sphere
.............................................. W. Fraser and C. C. Gotlieb
Sign Wave Analysis in Matrix Eigenvalue Problems
.................................................. K. M. Brown and P. Henrici
Acceleration Techniques for Iterated Vector and Matrix Problems .... P. Wynn
Computing Error Bounds in Solving Linear Systems .................. J. Schröder
A Note on Finite Difference Methods for Solving the Eigenvalue Problems
of Second-Order Differential Equations .......................... M. R. Osborne
A Method for Computing the Circular Coverage Function
.............................................. A. R. Didonato and M. P. Jarnagin
Optimum-Point Formulas for Osculatory and Hyperosculatory Interpolation
.......................................................... Herbert E. Salzer

TECHNICAL NOTES AND SHORT PAPERS

A Heuristic Asymptotic Formula Concerning the Distribution of Prime
Numbers .............................................. Paul T. Bateman and Roger A. Horn
Primitive Polynomials (Mod. 2) .................................. E. J. Watson
Note on Latent Roots and Vectors of Segments of the Hilbert Matrix
.................................................. H. H. Denman and R. C. W. Ettinger
Expansions of Jacobian Elliptic Function in Powers of the Modulus ....
.................................................. Y. K. Lin and F. A. Lee
A Note on the Curve Fitting of Discrete Data by Economization
.......................................................... F. D. Burgoyne

Reviews and Descriptions of Tables and Books

The journal is published quarterly in one volume per year.
Subscription per year .............................................. $8.00
Single copies .................................................. $2.50

AMERICAN MATHEMATICAL SOCIETY
190 Hope Street, Providence 6, Rhode Island
Journals Published by the
American Mathematical Society

Bulletin of the American Mathematical Society

This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, research problems and a department of research announcements.

The subscription price is $7.00 per annual volume of six numbers.

Research Problems and Invited Addresses offered for publication should be sent to WALTER RUDIN, Department of Mathematics, University of Wisconsin, Madison, Wisconsin; Book Reviews to FELIX BROWDER, Department of Mathematics, Yale University, New Haven, Connecticut. Research Announcements offered for publication should be sent to some member of the Council of the Society, and communicated by him to E. E. MOISE, Department of Mathematics, Harvard University, Cambridge 38, Massachusetts. All other communications to the editors should be sent to the Managing Editor, E. E. MOISE.

Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics and is devoted principally to the publication of original papers of moderate length. A department called Shorter Notes was established for the purpose of publishing very short papers of an unusually elegant and polished character, for which there is normally no other outlet.

The subscription price is $11.00 per annual volume of six numbers.

Papers in algebra and number theory should be sent to ALEX ROSENBERG, Department of Mathematics, Cornell University, Ithaca, New York or GEORGE WHAPLES, Department of Mathematics, Indiana University, Bloomington, Indiana; in probability, real variables, logic, and foundations to P. R. HALMOS, Department of Mathematics, University of Michigan, Ann Arbor, Michigan; in abstract analysis to either P. R. HALMOS or ALEX ROSENBERG; in geometry and topology to ELDON DYER, Eckhart Hall, University of Chicago, Chicago 37, Illinois; in other branches of analysis, applied mathematics, and all other fields to M. H. HEINS, Department of Mathematics, University of Illinois, Urbana, Illinois or FRITZ JOHN, Courant Institute of Mathematical Sciences, 4 Washington Place, New York 3, New York. All other communications to the editors should be addressed to the Managing Editor, ALEX ROSENBERG.

Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than the PROCEEDINGS.

Four volumes of three numbers each will be published in 1962. The subscription price is $8.00 per volume.

Papers in analysis and applied mathematics should be sent to LIPMAN BERS, Courant Institute of Mathematical Sciences, New York University, New York, New York; in topology to W. S. MASSEY, Department of Mathematics, Yale University, Box 2155, Yale Station, New Haven, Connecticut; in algebra, number theory, and logic to DANIEL ZELINSKY, Department of Mathematics, Northwestern University, Evanston, Illinois; in geometry and abstract analysis to I. M. SINGER, Department of Mathematics, Massachusetts Institute of Technology, Cambridge 39, Massachusetts; in statistics and probability to H. P. McKean, Jr., Department of Mathematics, Massachusetts Institute of Technology, Cambridge 39, Massachusetts. All other communications to the editors should be addressed to the Managing Editor, W. S. MASSEY.
Journals Published by the
American Mathematical Society

Soviet Mathematics—Doklady

This journal contains the entire pure mathematics section of the Doklady Akademii Nauk SSSR in translation. It appears six times a year, each bimonthly issue corresponding to one volume of the Soviet Doklady. (The Doklady Akademii Nauk SSSR is issued three times a month, six issues constituting a volume.)

Rates per annual volume are as follows: Domestic subscriptions, $17.50; foreign subscriptions, $20.00. Single issues are $5.00.

Mathematical Reviews

This journal contains abstracts and reviews of the current mathematical literature of the world. It is sponsored by thirteen mathematical organizations, located both in the United States and abroad.

The publication of Mathematical Reviews was begun in 1940. Starting in 1961, it appears monthly, in two parts. Prior to 1961 it appeared in eleven single issues. Orders for complete volumes only are accepted. Volumes 1–21 are available at the following prices: Vols. 1–16 (1940–1955), $42.00 each; all other volumes $50.00. In 1962, it will be published in two volumes; the price of each volume will be $50.00.

Notices of the American Mathematical Society

This journal announces the programs of the meetings of the Society. It carries the abstracts of all contributed papers presented at the meetings of the Society and publishes news items of interest to mathematical scientists.

The subscription price is $7.00 per annual volume.

All communications should be addressed to the Editor, 190 Hope Street, Providence 6, Rhode Island. News items and insertions for each issue must be in the hands of the editor on or before the deadline for the abstracts for the papers to be presented in the meetings announced in that issue. These deadlines are published regularly on the back of the title page.

Mathematics of Computation

A Journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields. Published by the Society for the National Academy of Sciences-National Research Council.

Subscription price is $8.00 per volume of 4 issues. Single copies are $2.50.

Chinese Mathematics—ACTA

This is a cover-to-cover translation into English of Acta Mathematica Sinica published by Academia Sinica Peking, People's Republic of China. Acta Mathematica Sinica contains current research in all fields of pure mathematics. Volume 1, 1960 will have three issues (issue no. 1 available July, 1962); volume 2 four issues. It will appear quarterly or as published. Subscription price per volume $20.00.
