CORRECTION TO A POLYNOMIAL ANALOG OF THE GOLDBACH CONJECTURE

BY DAVID HAYES

Communicated by E. E. Moise, April 20, 1963

On page 116 of this paper, I state that if $r < 2h$, then $\pi(K, d) \leq d$ for $d > 1$. This will be true in general only when $H$ is an irreducible. However, the proof will still go through if either (1) $H$ is square-free or else (2) $h + 1$ is not divisible by the characteristic of the underlying finite field. That one of these conditions hold should therefore be added to Theorem 2 as a hypothesis.
