PROVIDENCE, RHODE ISLAND USA
ISSN 0273-0979
Bulletin (New Series) of the American Mathematical Society

This journal is devoted to articles of the following types:

**Research-Expository Papers**

These are, by definition, papers that present a clear and insightful exposition of significant aspects of contemporary mathematical research. Gibbs lectures, Progress in Mathematics lectures, and retiring presidential addresses will be included in this section.

**Research Announcements**

The purpose of this department is to publish quickly and disseminate widely significant new mathematics. A Research Announcement should be designed to communicate its contents to a broad mathematical audience and should meet high standards for clarity as well as mathematical content.

**Research Reports**

These are brief, timely reports on important mathematical developments. They are normally solicited and often written by a disinterested expert.

**Book Reviews**

Book Reviews are accepted for publication by invitation only. Unsolicited manuscripts will not be considered.

Subscription information. *Bulletin (New Series) of the American Mathematical Society* is published quarterly. Subscription prices for Volumes 30 and 31 (1994) are $228 list, $182 institutional member, $137 individual member. The subscription price for members is included in the annual dues. A late charge of 10% of the subscription price will be imposed upon orders received from non-members after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $8.00; subscribers in India must pay a postage surcharge of $13.00. Expedited delivery to destinations in North America $12; elsewhere $21. Beginning in January 1992, the Bulletin will be available from the electronic service e-MATH [telnet e-MATH.ams.org (or telnet 130.44.1.100). Login and password are e-math.]

**Back number information.** For back issues see the *AMS Catalog of Publications.*

Subscriptions and orders should be addressed to the American Mathematical Society, P. O. Box 5904, Boston, MA 02206-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P. O. Box 6248, Providence, RI 02940-6248.

**Copying and reprinting.** Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248. Requests can also be made by e-mail to reprint-permission@math.ams.org.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

*Bulletin (New Series) of the American Mathematical Society* is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second class postage is paid at Providence, Rhode Island, and additional mailing offices. Postmaster: Send address changes to Bulletin, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

NOTICE TO SUBSCRIBERS

Starting with the 1995 subscription year, Bulletin of the American Mathematical Society will change to an annual volume numbering system. The number of issues per year will not change, but they will all be contained in one volume. The 1995 subscription for Bulletin will consist of Vol. 32, Nos. 1–4 instead of Vol. 32, Nos. 1 and 2 through Vol. 33, Nos. 1 and 2.
INDEX TO VOLUME 31
July–October 1994

RESEARCH-EXPOSITORY PAPERS

McMullen, Curtis T.  Frontiers in complex dynamics,  155
Murty, M. Ram.  Selberg's conjectures and Artin L-functions,  1
Rubin, K. and Silverberg, A.  A report on Wiles' Cambridge lectures,  15
Silverberg, A.  See Rubin, K.

RESEARCH ANNOUNCEMENTS

Bean, Michael A.  An isoperimetric inequality related to Thue's equation,  204
Benson, Chal, Jenkins, Joe, Lipsman, Ronald L., and Ratcliff, Gail.  The moment map for a multiplicity free action,  185
Boyer, S. and Zhang, X.  Exceptional surgery on knots,  197
Esterle, J., Strouse, E., and Zouakia, F.  Closed ideals of the algebra of absolutely convergent Taylor series,  39
Gabai, David.  On the geometric and topological rigidity of hyperbolic 3-manifolds,  228
Guest, M. A.  Configuration spaces and the space of rational curves on a toric variety,  191
Harvey, Reese and Lawson, H. Blaine, Jr.  A theory of characteristic currents associated with a singular connection,  54
Ivanov, A. A. and Shpectorov, S. V.  The flag-transitive tilde and Petersen-type geometries are all known,  173
Jenkins, Joe.  See Benson, Chal
Jitomirskaya, S.  See del Rio, R.
Kamada, Seiichi.  Alexander's and Markov's theorems in dimension four,  64
Kan, Ittai.  Open sets of diffeomorphisms having two attractors, each with an everywhere dense basin,  68
Latushkin, Y. and Montgomery-Smith, S.  Lyapunov theorems for Banach spaces,  44
Lawson, H. Blaine, Jr.  See Harvey, Reese
Lipsman, Ronald L.  See Benson, Chal
Makarov, N.  See del Rio, R.
Montgomery-Smith, S.  See Latushkin, Y.
Montgomery-Smith, S. J.  See de la Peña, Victor H.
de la Peña, Victor H. and Montgomery-Smith, S. J.  Bounds on the tail probability of U-statistics and quadratic forms,  223
Perlis, Robert.  See de Smit, Bart
Ratcliff, Gail.  See Benson, Chal
del Rio, R., Jitomirskaya, S., Makarov, N., and Simon, B.  Singular continuous spectrum is generic,  208
Shpectorov, S. V.  See Ivanov, A. A.
Simon, B.  See del Rio, R.
de Smit, Bart and Perlis, Robert.  Zeta functions do not determine class numbers,  213
Strouse, E.  See Esterle, J.
Triantafillou, Georgia.  Diffeomorphisms of manifolds with finite fundamental group,  50
Waymire, Edward C. and Williams, Stanley C.  A general decomposition theory for random cascades,  216
Williams, Stanley C.  See Waymire, Edward C.
Zhang, X.  See Boyer, S.
Zouakia, F.  See Esterle, J.

BOOK REVIEWS

Allday, Christopher and Puppe, Volker.  Cohomological methods in transformation groups, reviewed by Alejandro Adem,  254
Arnol'd, V. I., Goryunov, V. V., Lyashko, O. V., and Vasil'ev, V. A.  Dynamical systems VIII (singularity theory II), classification and applications, reviewed by J. W. Bruce,  283
Assmus, E. F., Jr., and Key, J. D.  Designs and their codes, reviewed by M. A. Wertheimer,  102
Aubin, Jean-Pierre.  Viability theory, reviewed by Leonard D. Berkovitz,  116
INDEX TO VOLUME 31

Bahturin, Y. A., Mikhelev, A. A., Petrogradsky, V. M., and Zaicev, M. V.  Infinite dimensional Lie superalgebras, reviewed by Eric Behr, 91

Editorial Information

As of August 4, 1994, the backlog for this journal was approximately 0 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in four months (the time necessary for editing and composing a typical issue).

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information to Authors and Editors

For Research-Expository Papers and Research Reports, the first page must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be a brief technical description of the new material. Then, for Research Reports there should be an introductory section addressed to nonexperts describing the motivation, background, and significance of the results announced. Following the statement of results, there should be a sketch of proofs that may be addressed to experts. For Research-Expository Papers and Research Reports, included with the footnotes to the paper, there should be the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of Mathematical Reviews, published with the December issue starting in 1990, as well as from the electronic service e-MATH [telnet
e-MATH.ams.org (or telnet 130.44.1.100). Login and password are e-math.] For journal abbreviations used in bibliographies, see the list of serials in the latest Mathematical Reviews annual index. Authors are encouraged to supply electronic addresses when available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. The AMS encourages submission of electronically prepared manuscripts in \texttt{AMSTeX} or \texttt{AMSLaTeX} because properly prepared electronic manuscripts save the author proofreading time and move more quickly through the production process. To this end, the Society has prepared "preprint" style files, specifically the amspt style of \texttt{AMSTeX} and the amsart style of \texttt{AMSLaTeX}, which will simplify the work of authors and of the production staff. Those authors who make use of these style files from the beginning of the writing process will further reduce their own effort. Electronically submitted manuscripts prepared in plain \TeX or \LaTeX do not mesh properly with the AMS production systems and cannot, therefore, realize the same kind of expedited processing. Users of plain \TeX should have little difficulty learning \AMSTeX, and \LaTeX users will find that \AMSLaTeX is the same as \LaTeX with additional commands to simplify the typesetting of mathematics.

\textit{Guidelines for Preparing Electronic Manuscripts} provides additional assistance and is available for use with either \AMSTeX or \AMSLaTeX. Authors with FTP access may obtain \textit{Guidelines} from the Society's Internet node e-MATH.ams.org (130.44.1.100). For those without FTP access \textit{Guidelines} can be obtained free of charge from the e-mail address guide-elec@math.ams.org (Internet) or from the Customer Services Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting \textit{Guidelines}, please specify which version you want.

At the time of submission, authors should indicate if the paper has been prepared using \AMSTeX or \AMSLaTeX. The \textit{Manual for Authors of Mathematical Papers} should be consulted for symbols and style conventions. The \textit{Manual} may be obtained free of charge from the e-mail address cust-serv@math.ams.org or from the Customer Services Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The Editor should supply the Providence office with a manuscript that corresponds to the electronic file being submitted.

Electronic manuscripts should be sent to the Providence office immediately after the paper has been accepted for publication. Editors should require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. They can be sent via e-mail to pub-submit@math.ams.org (Internet) or on diskettes to the Publications Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When submitting electronic manuscripts please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office.

Copies of the paper should be sent directly to the appropriate Editor, and the author should keep one copy. For Research-Expository Papers, two copies of
the manuscript should be submitted to Professor Richard S. Palais, Department of Mathematics, Brandeis University, Waltham, MA 02154-9110. For Research Reports, four copies of the manuscript should be submitted to Professor Haynes R. Miller, Room 2-237, Massachusetts Institute of Technology, Cambridge, MA 02139-4307. Research Reports can also be submitted electronically in \textsc{ams-\LaTeX} or \textsc{ams-l\TeX} to bams@math.mit.edu.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

Research-Expository Papers (Surveys)

This section is intended for reasonably broad expository surveys of a currently active area of mathematical research. To stress this fact, starting with the January 1995 issue, the name of the section will be changed from "Research-Expository Papers" to "Research-Expository Surveys". The level of exposition is expected to be such that a graduate student—or a research mathematician from a remote area—will be able to read an article in order to get an overview of a subject. A well-written article will include motivating problems and examples, some indication of the historical development of the subject, and of course the results and open problems that make it an interesting and exciting area of mathematics. In most cases proofs should be at most briefly sketched, and there should be a good bibliography whose main aim should be helping those wishing to pursue the subject further. Usually Research-Expository Surveys will be at most 40 pages long.

Certain of the Society's Lecture Series, including the Gibb's Lectures, Colloquium Lectures, and Progress in Mathematics Lectures, traditionally appear in the Research-Expository Surveys, and those invited to give these lectures are informed of this tradition and of the above guidelines. Research-Expository Surveys are also frequently solicited by the Editorial Board, but unsolicited manuscripts are also encouraged; in particular, those invited to give invited hour addresses at meetings of the Society should consider writing up their lecture in a manner that meets the requirements of the preceding paragraph and submitting their manuscripts for consideration by the Editorial Board for the Research-Expository Surveys.

Research Reports

In August 1993, the Council of the AMS voted to replace the Research Announcements with a new category of articles, to be called Research Reports. The first Research Reports are expected to be published in the July 1995 issue. The \textit{Bulletin} stopped accepting submissions of Research Announcements on January 31, 1994. The Editor for Research Announcements will continue to serve as Editor for Research Reports.

A Research Report is a timely, short (4–8 pages) report on a recent accomplishment in mathematical research. It should be written so as to be understandable by mathematicians who are not experts in the subject matter of the Report. The context giving significance to the research being reported on should be made clear, and the consequences or potential consequences should be described. Usually only the barest hint of the methods of proof should
be given, although elements of the proof which are novel should be included. In any case, references should be given so that an interested reader can find the details. It is expected that Research Reports will frequently be written by specialists other than the individuals immediately involved in the research. Approximately twenty-four Reports will be published each year.

Research Reports are normally solicited by the Editor for Research Reports and the Board of Associate Editors. They cordially invite suggestions for topics and reporters. Unsolicited manuscripts, submitted to the Editor for Research Reports, will also be considered.
