Consistency of the axiom of choice and of the generalized continuum-hypothesis with the axioms of set theory, by Kurt Gödel, Annals of Mathematics Studies, no. 3, University Press, Princeton; Humphrey Milford and Oxford University Press, London, 1940, 66 pp., \$1.25

In this study it is proved that the axiom of choice and Cantor's generalized continuum-hypothesis are consistent with the other axioms of set theory if these latter axioms are themselves consistent. The system Σ of axioms here adopted for set theory is essentially that of P. Bernays (Journal of Symbolic Logic, vol. 2, p. 65).
