ERRATUM TO THE REVIEW OF
"LIE GROUPS. AN APPROACH
THROUGH INVARIANTS AND REPRESENTATIONS"

V. S. VARADARAJAN

In my review of *Lie Groups. An Approach Through Invariants and Representations* by Claudio Procesi (Bull. Amer. Math. Soc., **45** (2008), 681), I neglected to mention the fact that the Block–Wilson classification of restricted simple Lie algebras in characteristic $p > 0$ assumes that $p > 7$. The classification has been extended by Alexander Premet and Helmut Strade, for primes $p = 5, 7$; see `arXiv:0711.2899` for more detail. I am grateful to Professor James Humphreys for bringing this to my attention.
