Editorial Information

As of December 31, 1996, the backlog for this journal was approximately 0 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in four months (the time necessary for editing and composing a typical issue).
A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors and Editors

Initial submission. Two copies of the paper should be sent directly to one of the Editors and the author should keep one copy.

The first page must contain a descriptive title that is short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. Included with the footnotes to the paper, there should be the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of classifications may be found in the annual index of Mathematical Reviews, published with the December issue starting in 1990. Journal abbreviations used in bibliographies are also listed in the latest Mathematical Reviews annual index. The classifications and the journal abbreviations are accessible from e-MATH via the World Wide Web through the URL http://www.ams.org/committee/publications/mr-info.html or via FTP to e-math.ams.org (login as anonymous and enter username as password). The classifications are available as a browsable list, and the journal abbreviations are available through a search tool. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. The AMS encourages submission of electronically prepared manuscripts, with a strong preference for \texttt{AMS-\LaTeX} submissions. To this end, the Society has prepared \texttt{AMS-\LaTeX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the \textit{AMS Author Handbook}, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMS-\LaTeX} style file automatically provide hypertext linking to the bibliography and other elements of the article for searching electronically on the World Wide Web. Because linking must often be added manually to submissions in other forms of \TeX, using \texttt{AMS-\LaTeX} also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \texttt{AMS-\LaTeX} papers also move more efficiently through the production stream, helping to minimize publishing costs.

\texttt{AMS-\LaTeX} is the highly preferred format of \TeX, but author packages are also available in \texttt{AMS-\TeX}. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Electronically submitted manuscripts prepared in \TeX or plain \TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. \TeX users will find that \texttt{AMS-\LaTeX} is the same as \TeX with additional commands to simplify the typesetting of mathematics, and users of plain \TeX should have little difficulty learning \texttt{AMS-\LaTeX}.

Authors may retrieve an author package from e-MATH via the World Wide Web through the URL http://www.ams.org/tex/ or via FTP to e-math.ams.org (login as anonymous and enter username as password). The author package can also be obtained free of charge by sending e-mail to pub@ams.org (Internet) or from the
At the time of submission, authors should indicate if the paper has been prepared using \texttt{AMS-\LaTeX} or \texttt{AMS-\TeX} and provide the Editor with a paper manuscript that matches the electronic manuscript. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via e-mail to \texttt{pub-submit@ams.org} (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When submitting an electronic manuscript, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to submit files are included in the author package.

\textbf{Electronic graphics.} Figures may be submitted to the AMS in an electronic format. The AMS recommends that graphics created electronically be saved in Encapsulated PostScript (EPS) format. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images.

If the graphics package used does not support EPS output, the graphics file should be saved in one of the standard graphics formats—such as TIFF, PICT, GIF, etc.—rather than in an application-dependent format. Graphics files submitted in an application-dependent format are not likely to be used. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15\% and 85\%. Screens which fall outside of this range are too light or too dark to print correctly.

\textbf{\TeX\ files available.} Beginning with the January 1992 issue of the \textit{Bulletin} and the January 1996 issues of \textit{Transactions}, \textit{Proceedings}, \textit{Mathematics of Computation}, and the \textit{Journal of the AMS}, \TeX\ files can be downloaded from e-MA TH, starting from URL \url{http://www.ams.org/journals/}. Authors without Web access may request their files at the address given below after the article has been published. For \textit{Bulletin} papers published in 1987 through 1991 and for \textit{Transactions}, \textit{Proceedings}, \textit{Mathematics of Computation}, and the \textit{Journal of the AMS} papers published in 1987 through 1995, \TeX\ files are available upon request for authors without Web access by sending e-mail to \texttt{file-request@ams.org} or by contacting the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The \TeX\ file will be sent to the
author making the request after the article goes to the printer. If the requestor can receive Internet e-mail, please include the e-mail address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because \TeX{} production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, \TeX{} files cannot be guaranteed to run through the author’s version of \TeX{} without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author’s \TeX{} environment.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.
