INDEX TO VOLUME 18 (2005)

Abért, Miklós, and Bálint Virág.  
*Dimension and randomness in groups acting on rooted trees*, 157

Bartels, Arthur, and Holger Reich.  
*On the Farrell-Jones conjecture for higher algebraic K-theory*, 501

Bismut, Jean-Michel.  
*The hypoelliptic Laplacian on the cotangent bundle*, 379

*The orbifold Chow ring of toric Deligne-Mumford stacks*, 193

Bourgain, J.  
*Mordell's exponential sum estimate revisited*, 477

Buch, Anders Skovsted.  
*Alternating signs of quiver coefficients*, 217

Bushnell, Colin J., and Guy Henniart.  
*The essentially tame local Langlands correspondence, I*, 685

Chen, Linda.  
*See Borisov, Lev A.*

Colding, Tobias H., and William P. Minicozzi II.  
*Estimates for the extinction time for the Ricci flow on certain 3-manifolds and a question of Perelman*, 561

Coman, Dan, Norman Levenberg, and Evgeny A. Poletsky.  
*Quasianalyticity and pluripolarity*, 239

Dinh, Tien-Cuong, and Nessim Sibony.  
*Green currents for holomorphic automorphisms of compact Kähler manifolds*, 291

*The failure of rational dilation on a triply connected domain*, 873

Duong, Xuan Thinh, and Lixin Yan.  
*Duality of Hardy and BMO spaces associated with operators with heat kernel bounds*, 943

E, Weinan, Pingbing Ming, and Pingwen Zhang.  
*Analysis of the heterogeneous multiscale method for elliptic homogenization problems*, 121

Favre, Charles, and Mattias Jonsson.  
*Valuations and multiplier ideals*, 655

Gabioriau, Damien, and Sorin Popa.  
*An uncountable family of nonorbit equivalent actions of \( F_n \)*, 547

Goncharov, A. B.  
*Polylogarithms, regulators, and Arakelov motivic complexes*, 1

Guès, Olivier, Guy Métivier, Mark Williams, and Kevin Zumbrun.  
*Multidimensional viscous shocks I: Degenerate symmetrizers and long time stability*, 61

Haglund, J., M. Haiman, and N. Loehr.  
*A combinatorial formula for Macdonald polynomials*, 735

Haiman, M.  
*See Haglund, J.*

Henniart, Guy.  
*See Bushnell, Colin J.*

Jonsson, Mattias.  
*See Favre, Charles*

Kiselev, Alexander.  
*Imbedded singular continuous spectrum for Schrödinger operators*, 571

Lannes, David.  
*Well-posedness of the water-waves equations*, 605

Levenberg, Norman.  
*See Coman, Dan*

Loehr, N.  
*See Haglund, J.*

Marmi, S., P. Moussa, and J.-C. Yoccoz.  
*The cohomological equation for Roth-type interval exchange maps*, 823

Marshall, Donald E., and Steffen Rohde.  
*The Loewner differential equation for Roth-type interval exchange maps*, 763

Matusevich, Laura Felicia, Ezra Miller, and Uli Walther.  
*Homological methods for hypergeometric families*, 919

McCullough, Scott.  
*See Dritschel, Michael A.*

McMullen, Curtis T.  
*Minkowski's conjecture, well-rounded lattices and topological dimension*, 711

Métivier, Guy.  
*See Guès, Olivier*

Mikhalkin, Grigory.  
*Enumerative tropical algebraic geometry in \( \mathbb{R}^2 \)*, 313

Miller, Ezra.  
*See Matusevich, Laura Felicia*

Ming, Pingbing.  
*See E, Weinan*

Minicozzi, William P., II.  
*See Colding, Tobias H.*

Moussa, P.

Editorial Information
Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/jams.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.
A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. Two copies of the paper should be sent directly to one of the Editors (not an Associate Editor), and the author should keep one copy.

IF an editor is agreeable, an electronic manuscript prepared in \TeX or \LaTeX may be submitted by pointing to an appropriate URL on a preprint or e-print server.

The first page must contain a descriptive title that is short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. Although an abstract is not required upon initial submission, upon acceptance authors will be requested to supply an abstract for the electronic version of this journal. The AMS offers free worldwide access to the electronic abstracts. An abstract should be at least one complete sentence and at most 300 words. No abstracts will appear in the printed journal starting in 1998. Included with the footnotes to the paper should be the 2000 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The list of classifications is also available in print starting with the 1999 annual index of Mathematical Reviews. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/publications/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. The AMS encourages electronically prepared manuscripts, with a strong preference for \LaTeX. To this end, the Society has prepared \LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the AMS Author Handbook, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \LaTeX style file and the \texttt{label} and \texttt{ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \TeX, using \LaTeX also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \LaTeX papers also move more efficiently through the production stream, helping to minimize publishing costs.

\LaTeX is the highly preferred format of \TeX, but author packages are also available in \LaTeX. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \LaTeX or plain \TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. \LaTeX users will find that \LaTeX is the same as \LaTeX with additional commands to simplify the typesetting of mathematics, and users of plain \TeX should have the foundation for learning \LaTeX.

Authors may retrieve an author package from the AMS website starting from www.ams.org/tex/ or via FTP to ftp.ams.org (login as anonymous, enter username as password, and type cd pub/author-info). The AMS Author Handbook and the Instruction Manual are available in PDF format following the author packages link from...
www.ams.org/tex/. The author package can also be obtained free of charge by sending email to pub@ams.org (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{AMSTeX} or \texttt{AMSTeX}, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

At the time of submission, authors should indicate if the paper has been prepared using \texttt{AMSTeX} or \texttt{AMSTeX} and provide the Editor with a paper manuscript that matches the electronic manuscript. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted.

No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available from www.ams.org/jourhtml/authors.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

**AMS policy on making changes to articles after posting.** Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website corrections may be made to the paper by submitting a traditional errata article to the Editor. The errata article will appear in a future print issue and will link back and forth on the Web to the original article online.

**Secure manuscript tracking on the Web and via email.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and
Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/ or via email sent to mstrack-query@ams.org. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word all on the subject line. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to jams-query@ams.org.

\TeX files available. Beginning with the January 1992 issue of the \textit{Bulletin} and the January 1996 issues of \textit{Transactions, Proceedings, Mathematics of Computation,} and the \textit{Journal of the AMS}, \TeX files can be downloaded from the AMS website starting from www.ams.org/journals/. Authors without Web access may request their files at the address given below after the article has been published. For \textit{Bulletin} papers published in 1987 through 1991 and for \textit{Transactions, Proceedings, Mathematics of Computation,} and the \textit{Journal of the AMS} papers published in 1987 through 1995, \TeX files are available upon request for authors without Web access by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The \TeX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. \textbf{Note:} Because \TeX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, \TeX files cannot be guaranteed to run through the author’s version of \TeX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author’s \TeX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to jams-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
