Information for Subscribers

The journal is published quarterly in one volume per year, with issues numbered serially since Volume 1, Number 1. The subscription price is $16.00. All back volumes are available. For Volumes 1–19 (1943–1965), prices are $20.00 per volume and $6.00 per issue, subsequent volumes are $24.00.

Unpublished Mathematical Tables

The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section Reviews and Descriptions of Tables and Books. Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page.

Subscriptions, address changes, business communications and payments should be sent to:

Information for Contributors

Manuscripts should be typewritten double-spaced in the format used by the journal. For journal abbreviations, see Mathematical Reviews, v. 28, Index. An author should submit the original and one copy of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in "Information for Contributors to Mathematics of Computation" and "Manual for Authors," both of which are available upon request from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Eugene Isaacson, Chairman, Editorial Committee, Mathematics of Computation, New York University, Courant Institute of Mathematical Sciences, 251 Mercer Street, New York, New York 10012. Institutions sponsoring research reported in the journal are assessed page charges.

Beginning with the January 1969 issue of MATHEMATICS OF COMPUTATION, we will publish an author's abstract at the head of each article. Authors should submit a brief and reasonably self-contained abstract with each paper.

Microcard Edition

Volumes 1–14 (1943–1960) are available on Microcards at $39.00 for the complete set and may be purchased from Microcard Editions, Inc., 901 26th Street N. W., Washington, D. C. 20037.
Machine, Assembly, and Systems
Programming on the IBM 360
W. H. Payne. Conforms to topics suggested by the ACM Curriculum '68. Contains 38 tested programs. April. $4.95 (tentative); paper

Introduction to PL/1 Programming
R. C. SPROWLS. Presents a subset of PL/1 illustrating its wide range of applications. February. $3.95 (tentative); paper

A Course in Numerical Analysis
H. M. Lieberstein. Stresses finite difference methods for solving linear algebraic systems. 258 pp.; $14.95

Computers
A Programming Problem Approach Revised Edition
R. C. SPROWLS. A solid grounding in the problem-solving uses of the computer. Instructor's Manual. 399 pp.; $9.95

COMPUTATION: Finite and Infinite Machines by Marvin L. Minsky, Professor of Electrical Engineering, Massachusetts Institute of Technology. Provides an introduction to the theories of finite-state machines, programmed computers, Turing machines and formal languages (in the form of Post Systems). 1967, 317 pp., $12.95

COMPUTERS AND THE POLICY MAKING COMMUNITY Application to International Relations by Davis B. Bobrow, Senior Social Scientist, Oak Ridge National Laboratory and Judah L. Schwartz, Education Research Center, Massachusetts Institute of Technology. An introduction to the nature of the computer and its applications to the analysis, conduct and teaching of international relations. In the Prentice-Hall Automatic Computation Series, Edited by George Forsythe. 400 pp., Nov. 68, $12.50

PROGRAMMING LANGUAGES: History and Fundamentals by Jean E. Sammet, Programming Language Technology Manager, Federal Systems Division, IBM Corporation. Presents an overall view of higher level languages; bringing together in one place, fundamental information on programming languages, including history, general characteristics, similarities and differences. Provides specific, basic information on all significant and most minor programming languages. In the Prentice-Hall Automatic Computation Series, Edited by George Forsythe. Nov. 68, approx. 704 pp., $12.95
