Editorial Committee

EUGENE ISAACSON, Chairman, New York University, Courant Institute of Mathematical Sciences, 251 Mercer Street, New York, New York 10012
Assistant to the Chairman: CHARLOTTE W. JOHN
JAMES H. BRAMBLE, Department of Mathematics, Cornell University, Ithaca, New York 14850
WALTER GAUTSCHI, Computer Sciences Department, Purdue University, Lafayette, Indiana 47907
DONALD GOLDFARB, Department of Computer Sciences, School of Engineering, The City College of the City University of New York, 139th Street & Convent Avenue, New York, New York 10031
ALSTON S. HOUSEHOLDER, Department of Mathematics, Ayres Hall, The University of Tennessee, Knoxville, Tennessee 37916
HEINZ-OTTO KREISS, Computer Science Department, University of Uppsala, Uppsala, Sturegaten 4, Sweden
YUDELL L. LUKE, Department of Mathematics, University of Missouri at Kansas City, Kansas City, Missouri 64110
JAMES N. LYNNESS, Argonne National Laboratory, 9700 South Cass Avenue, Argonne, Illinois 60439
JAMES W. DANIEL, Department of Mathematics, University of Texas at Austin, Austin, Texas 78712
BERESFORD PARLETT, Department of Computer Science, University of California, Berkeley, California 94720
PHILIP RABINOWITZ, Department of Applied Mathematics, The Weizmann Institute of Science, Rehovot, Israel
DANIEL SHANKS, Naval Ship Research and Development Center, Washington, D.C. 20034
HANS J. STETTER, Institut für Numerische Mathematik, Technische Hochschule Wien, A-1040 Wien, Karlsplatz 13, Austria
JOHN W. WRENCH, JR., Naval Ship Research and Development Center, Washington, D.C. 20034

Information for Subscribers

The journal is published quarterly in one volume per year, with issues numbered serially since Volume 1, Number 1. The subscription price is $20.00. All back volumes are available. For Volumes 1–19 (1943–1965), prices are $20.00 per volume, subsequent volumes are $24.00.

Unpublished Mathematical Tables

The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section Reviews and Descriptions of Tables and Books. Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page.

Subscriptions, address changes, business communications and payments should be sent to:

Information for Contributors

Manuscripts should be typewritten double-spaced in the format used by the journal. For journal abbreviations, see the latest Mathematical Reviews volume index. An author should submit the original and one copy of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in “Information for Contributors to Mathematics of Computation” and “Manual for Authors,” both of which are available upon request from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Eugene Isaacson, Chairman, Editorial Committee, Mathematics of Computation, New York University, Courant Institute of Mathematical Sciences, 251 Mercer Street, New York, New York 10012. Institutions sponsoring research reported in the journal are assessed page and microfiche charges.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract and by AMS (MOS) subject classification numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the Index to Mathematical Reviews, Volume 39 (June 1970).

Microcard Edition

Volumes 1–14 (1943–1960) are available on Microcards at $39.00 for the complete set and may be purchased from Microcard Editions, Inc., 901 26th Street, N. W., Washington, D. C. 20037.
Type any technical symbol into your reports.

Typit can supply you with any symbol you want. We have over 1200 now in stock, and can make additional symbols to meet your requirements. Typit symbols are used world-wide by industry, education, and government. These symbols easily adapt to your present typewriter (even a Selectric). For further information write for free catalog or call: Typit Division, Mechanical Enterprises, Inc., 5249 Duke Street, Alexandria, Virginia 22304. Phone: (703) 751-3030

Mathematics of the USSR—Izvestija
This journal is a cover-to-cover translation of Izvestija Akademii Nauk SSSR Serija Matematicheskaja, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. Starting with Volume 1, Number 1, January-February 1967, which corresponds to the Russian original Tom 31, Number 1.

Mathematics of the USSR—Sbornik
This journal is a cover-to-cover translation of Matematicheskii Sbornik (Novaja Serija), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967, which corresponds to the Russian original Tom 72 (114), No. 1.

New title

1969 NUMBER THEORY INSTITUTE
Edited by Donald J. Lewis

PROCEEDINGS OF SYMPOSIA IN PURE MATHEMATICS, Volume XX; 465 pp.;
List price $20.70; Member price $15.53

This volume, edited by Donald J. Lewis, contains the proceedings of the Sixteenth Summer Research Institute of the American Mathematical Society. During the 1960's, a large number of old problems in number theory were solved; some by refinements of known methods, others by the introduction of entirely new methods. Included in this volume are sixteen invited lectures and nine seminar talks which were felt to have been particularly effective surveys. The papers are addressed to a general number theory audience rather than to a group of specialists and are meant to enable a number theorist to become acquainted with important innovations in areas outside his own specialty. It is hoped that this collection of papers will facilitate access to various parts of number theory and foster further development.

AMERICAN MATHEMATICAL SOCIETY
P. O. Box 6248, Providence, R. I. 02904
Designing Systems Programs
RICHARD L. GAUTHIER, Vice-President, Programmatic Inc.
STEPHEN D. PONTO, Senior Systems Analyst, Programmatic Inc.
Designed to approach systems design pragmatically and thoroughly. This book does not depend on machine oriented language. Emphasizes compilers, but the material can be readily applied to other areas. 1970, 274 pp., $11.50 (20196-2)

Numerical Initial Value Problems in Ordinary Differential Equations
C. WILLIAM GEAR, Stanford University
Discusses all classes of step-by-step methods suitable for the automatic numerical integration of general problems. The book covers the derivation of methods, the theory of error and convergence, and practical implementation on a computer. July 1971, approx. 304 pp., $12.95 (62660-6)

Collectively Compact Operator Approximation Theory: And Applications to Integral Equations
PHILIP M. ANSELONE, Oregon State University
A recently developed abstract operator approximation theory and various applications to numerical integration approximations of integral operators. Both linear and non-linear operators are discussed. August 1971, approx. 128 pp., $12.50 (14067-3)

Parallelism in Hardware and Software
HAROLD LORIN, IBM Corporation, Systems Research Institute
Introduces and surveys the phenomenon of parallel effect in computing systems. Discusses such diverse topics as the management of core in a multiprogramming operating system, the organization of machines of the CDC 6600 class, and the aspects of compiler design brought together by the achievement of parallel operations. Designed especially for non-mathematicians. June 1971, approx. 512 pp., $15.00 (64863-4)

The SMART Retrieval System: Experiments in Automatic Document Processing
GERARD SALTON, Cornell University
Deals with the design and applications of fully automatic information retrieval systems. The design of the automatic SMART document retrieval system is described in the areas of systems evaluation, automatic language analysis, automatic document classification and search, user feedback procedures and operational comparisons with conventional manually-based retrieval systems. 1971, 512 pp., $15.00 (81452-5)

The Computerized Society
JAMES MARTIN, IBM Corporation, Systems Research Institute and ADRIAN R. D. NORMAN
Two professionals in design and implementation of advanced computer systems explore the direction and implications of the exploding computer technology. Their timely book projects possible future relations between the computer and society. 1970, 544 pp., $10.95 (16597-7)

NEW and NOTABLE from McGRAW-HILL

At last—a self-contained how-to guide for solving reliability problems—putting all necessary tables at your fingertips...

RELIABILITY MATHEMATICS
By Bertram L. Amstadter 416 pages $17.50
In early chapters, this new book defines concepts and terms proper to statistical methods—stripped down to strict essentials. Later chapters spell out modern methods of using reliability tables—particularly new simplified methods devised by the author for solving otherwise difficult problems.

The author defines all terms and symbols used and confines himself to those most widely used—no new or off-beat symbols are included.

In addition, in the Appendixes, he provides all pertinent statistical and reliability tables—not just those which are most frequently used. Nowhere does the book presume or require statistical or calculus know-how.

The practicing engineer—even if he's forgotten more advanced mathematics than he remembers—will find this clear and simple treatment of probability and statistics easy to read and easy to apply...

PROBABILITY AND STATISTICS
By L. Daniel Massey 192 pages $11.50
Applications—rather than fine points and technicalities—are what the author emphasizes. He not only provides you with a working knowledge of probability and statistics but also helps you find standard techniques or formulate original techniques for solving your own particular problems.

ALSO of INTEREST

INTRODUCTION TO MATRIX ANALYSIS, 2 Ed.
By Richard Bellman 432 pages $14.75
This new revised edition provides expert coverage of the basis for mathematical, physical, engineering, and economic applications. It clearly covers the three basic parts of the theory: symmetric matrices and quadratic forms, matrices and differential equations, and positive matrices and their use in probability theory and mathematical economics. And it includes many references to important technical literature in the field of matrix analysis, both theoretical and applied.

AN ILLUSTRATED GUIDE TO LINEAR PROGRAMMING
By Saul I. Gass 192 pages $9.95
This is a most unusual book—it introduces the concepts of linear programming in a non-technical and humorous manner. Amusing real-life problems and numerous cartoons illustrate key principles and provide a clear picture of this important decision-making technique—what it is, what it can do, how it's applied, and what type problems it solves. Little or no background in the area is presumed.

Available at bookstores or directly from the publisher on 10-day FREE EXAMINATION. Write Dept. MC 471, McGraw-Hill Book Company, 330 W. 42nd Street, New York, N.Y. 10036.
