TABLE ERRATA

On p. 329, in Table 7.11 (Complex Zeros of Fresnel Integrals), terminal-digit corrections are necessary in the 4D values of $x_3$, $x_4$, $y_3$, $y_5$, $y^*_3$, and $y^*_4$.

These corrections are based upon a comparison of these data with 10-11D values of the roots as recently computed by the present authors, who extended their calculations to include the first hundred zeros to 10D (available from the authors on request).

The new values of the first five zeros are:

\[
\begin{array}{lll}
n & z_n: C(z_n) = 0 & z_n: S(z_n) = 0 \\
1 & 1.74366 74862 + 0.30573 50636 i & 2.00925 70118 + 0.28854 78973 i \\
2 & 2.65145 95973 + 0.25290 39554 i & 2.83347 72325 + 0.24428 52407 i \\
3 & 3.32035 93633 + 0.22395 34580 i & 3.46753 30835 + 0.21849 26804 i \\
4 & 3.87573 44884 + 0.20474 74705 i & 4.00257 82433 + 0.20085 10250 i \\
5 & 4.36106 35170 + 0.19066 97323 i & 4.47418 92952 + 0.18768 85891 i \\
\end{array}
\]

Furthermore, the asymptotic expressions at the end of the table are incorrect; they each require the addition of the quantity $\alpha^2/(8\lambda^{3/2})$ to the real part, where $\alpha = (2/\pi)\ln(\pi \lambda^{1/2})$, $\lambda = 4n - 1$ for $x_n$, and $\lambda = 4n$ for $x^*_n$. This correction can be obtained from the asymptotic estimate given by Kreyszig [1]; namely, $z_n \sim \lambda - \alpha/\pi \lambda + i\alpha$, with $\alpha$ and $\lambda$ as defined above, after expanding $z_n$ by the binomial theorem and retaining only terms of order $\lambda^{-3/2}$ or lower.

On p. 202, in Table 4.13 (Harmonic Analysis), a number of entries contain rounding errors. Thus, the 10D tabulated values of $\sin(2\pi r/s)$ should each be increased by a unit in the last decimal place for $s = 7, r = 1$; $s = 11, r = 1, 2, 4$; $s = 17, r = 3$; $s = 19, r = 3, 6$; $s = 21, r = 2$; $s = 22, r = 2, 3, 4, 7, 8, 9$; $s = 23, r = 1$. Also, the tabulated values of $\cos(2\pi r/s)$ should each be numerically decreased by

a unit in the last place for $s = 11$, $r = 4$; $s = 13$, $r = 2, 4$; $s = 19$, $r = 4$; $s = 22$, $r = 3, 8$; $s = 23$, $r = 1, 2, 4$; $s = 25$, $r = 2, 6, 9$.

Editorial note: A partial check of these corrections has been made through comparison with corresponding entries in the 20D Table of Cyclotomic Cosines deposited in the UMT file by D. H. Lehmer (MTAC, v. 6, 1952, p. 102, UMT 145).
