TABLE ERRATA

On p. 147 insert a factor 2 in the left members of the seventh, eighth, and ninth formulas.

On p. 149, in the right side of the second formula from the bottom, read \( \sin(\pi n \frac{\pi}{k}) \) in place of \( \sin(\pi n \frac{\pi}{k}) \).

On p. 150, in the seventh formula the first term in brackets on the right side should read \( \text{sc}(u, k') \text{dn}(u, k') \) or \( \text{sn}(u, k') \text{dc}(u, k') \).

On page xii the second paragraph (occupying lines 9 through 14) is incorrect and should be replaced by:

Very little improvement over linear inverse interpolation is possible, since an upper bound to its total error, namely \( r + \eta \), never exceeds \( \frac{1}{2} \eta \), and no method of inverse interpolation can guarantee an error less than \( \eta \).
