The authors are grateful to Mohamed Ayad for pointing out a mistake in the statement and proof of Lemma 2. The correct version is:

**Lemma 2.** Suppose $E$ is a nonsingular elliptic curve, and $P = (x_0, y_0)$ is a point in $E(\mathbb{Q})$ of infinite order. There is a number $c$, depending on the choice of curve $E$ and point $P$, such that

$$|\psi_m(x_0, y_0)| < c^{m^2-3}$$

for all integers $m \geq 2$.

**Proof.** Choose $c$ such that $c^6 \geq \max\{2, y_0^{-2}\}$ and $|\psi_m(x_0, y_0)| < c^{m^2-3}$ for $m = 2, 3, 4, 5, 6$. It is now easy to show by induction that $|\psi_m(x_0, y_0)| < c^{m^2-3}$ holds for all integers $m \geq 2$, using (4) and (5). $\square$
