Editorial Information

Information on the backlog for this journal can be found on the AMS website starting

In an effort to make articles available as quickly as possible, articles are electronically
published on the AMS website individually after proof is returned from authors and before
appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a
paper is accepted for publication, the Providence office will send a Consent to Publish and
Copyright Agreement to all authors of the paper. By submitting a paper to this journal,
authors certify that the results have not been submitted to nor are they under considera-
tion for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer-reviewed. The
AMS has a single blind peer-review process in which the reviewers know who the authors
of the manuscript are, but the authors do not have access to the information on who the
peer reviewers are. The AMS uses Centralized Manuscript Processing for initial sub-
mission. Authors should submit a PDF file using the Initial Manuscript Submission form
found at www.ams.org/submission/mcom, or send one copy of the manuscript to the following
address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION,
201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded
to the AMS, indicate that it is for Mathematics of Computation and include the name of
the corresponding author and contact information, such as an email address or mailing
address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a descriptive title, followed by an abstract that sum-
marizes the article in language suitable for workers in the general field (algebra, analysis, etc.).
The descriptive title should be short, but informative; useless or vague phrases such as
“some remarks about” or “concerning” should be avoided. The abstract must be brief, rea-
sonably self-contained, and not exceed 300 words. Included with the footnotes to the paper
should be the 2010 Mathematics Subject Classification representing the primary and sec-
ondary subjects of the article. The classifications are accessible from www.ams.org/msc/.
The Mathematics Subject Classification footnote may be followed by a list of key words
and phrases describing the subject matter of the article and taken from it. Journal abbre-
viations used in bibliographies are listed in the latest Mathematical Reviews annual index.
The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To
help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool
for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically pre-
pared in \LaTeX. To this end, the Society has prepared \LaTeX author packages
for each AMS publication. Author packages include instructions for preparing electronic
manuscripts, samples, and a style file that generates the particular design specifications
of that publication series. Articles properly prepared using the \LaTeX style file and
the \label and \cite commands automatically enable extensive intra-document linking to
the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for Mathematics of Computation from
www.ams.org/mcom/mcomauthorpac.html or via FTP to ftp.ams.org (login as anonymous,
enter your complete email address as password, and type cd pub/author-info). The
AMS Author Handbook and the Instruction Manual are available in PDF format from the
author package link. The author package can also be obtained free of charge by sending
email to tech-support@ams.org or from the Publication Division, American Mathematical
Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author
package, please specify the publication in which your paper will appear. Please be sure to
include your complete email address.
After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
