

Reverse Mathematics Proofs from the Inside Out

John Stillwell

Cloth \$24.95

“Reverse mathematics is a major research direction in the foundations of mathematics and mathematical logic, and the insights obtained from reverse mathematics will interest a wide mathematically minded audience. Stillwell’s book is self-contained and includes much background material in analysis, mathematical logic, combinatorics, and computability. I heartily commend this very readable and accessible book.”

—Stephen Simpson, Vanderbilt University

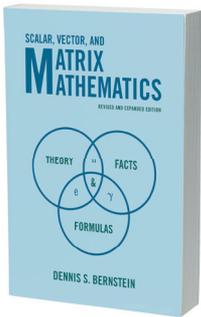

An Introduction to Analysis

Robert C. Gunning

Cloth \$75.00

“Gunning’s book is a great introduction to analysis that presents precisely what an honors analysis course should include. The writing is rigorous but lively, and much interesting mathematics is packed in it.”

—Wilhelm Schlag, University of Chicago

Scalar, Vector, and Matrix Mathematics

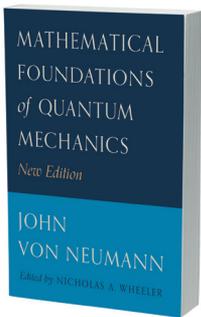

Theory, Facts, and Formulas
Revised and Expanded Edition

Dennis S. Bernstein

Paper \$99.50

“This is a book that any mathematician, physicist, or engineer would want to have at hand. If you are looking for a particular mathematical identity, an inequality, or a fact about matrices, then it is most likely that you will find it in this encyclopedic work.”

—Omran Kouba, Higher Institute for Applied Sciences and Technology, Damascus

Mathematical Foundations of Quantum Mechanics

New Edition

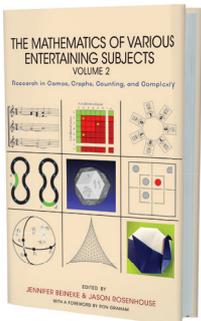

John von Neumann

Translated by Robert T. Beyer

Edited by Nicholas A. Wheeler

Paper \$99.50

In this new edition of this classic work, mathematical physicist Nicholas Wheeler has completely reset the book in TeX, making the text and equations far easier to read. He has also corrected a handful of typographic errors, revised some sentences for clarity and readability, provided an index for the first time, and added prefatory remarks drawn from the writings of Léon Van Hove and Freeman Dyson. The result brings new life to an essential work in theoretical physics and mathematics.

The Mathematics of Various Entertaining Subjects

Research in Games, Graphs,
Counting, and Complexity, Volume 2

Edited by Jennifer Beineke &

Jason Rosenhouse

Cloth \$85.00

“This book is a fascinating treasure trove of puzzles, brain teasers, and mathematical recreations that will keep your mind busy for months, if not years. A true gem that is destined to become a classic.”

—Eli Maor, author of *e: The Story of a Number*

Published in association with the National Museum of Mathematics
