Proceedings of the American Mathematical Society

The PROCEEDINGS of the American Mathematical Society is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The maximum length of an acceptable paper is about 8 printed pages. (Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.) The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. The authors should keep a complete copy of the manuscript, and should take the greatest possible care in preparing the original manuscript; hand drawn mathematical symbols are entirely satisfactory, if clearly done.

Very short notes (not to exceed 1 printed page) of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. (Items deemed suitable include an elegant new proof of an important and well known theorem, an illuminating example or counterexample, or a striking synthesis of familiar results.)

Papers in algebra and number theory should be sent to ARTHUR MATTUCK, Room 2-275, Mathematics Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, or to IRVING REINER, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in modern or classical analysis should be sent to IRVING GLICKSBERG, Mathematics Department, University of Washington, Seattle, Washington 98105, or to MAURICE HEINS, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in geometry or topology should be sent to ELDON DYSER, Graduate Studies Division, City University of New York, 33 West 42nd Street, New York, New York 10036.

Papers in applied mathematics, differential equations, and related areas of analysis should be sent to WOLFGANG WASOW, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in probability, statistics, and related fields should be sent to JOSHUA CHOVER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in logic, set theory, and related areas should be sent to W. W. BOONE, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

All other communications should be addressed to the Managing Editor, M. H. HEINS, at the above address.

Inquiries from authors regarding reprints, or changes of addresses for mailing proofs, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

One volume of six issues is planned for 1967. The subscription price is $12.00. Back issues (Vols. 1–17, 1950–1966) are available at the price of $14.00 each.

The American Mathematical Society also publishes the following journals which accept research papers: Bulletin, Transactions and Mathematics of Computation. For details and the list of editors, please consult a recent issue. Reviews of the current mathematical literature of the world are published in Mathematical Reviews; editorial correspondence for this journal should be sent to: The University of Michigan, 416 Fourth Street, Ann Arbor, Michigan 48103.
Contents—Continued from back cover

An example in dimension theory. By R. D. Anderson and J. E. Keisler. 709

Immersions into manifolds of constant negative curvature. By E. F. Stiel. 713

Homomorphic retractions in semigroups. By J. T. Borrego. 716

An example of two uniformities equal in height and proximity. By J. L. Hursch, Jr. 719

The mod 2 homology of the image of an exactly 2 to 1 map from a sphere. By G. W. Henderson. 723

von Neumann regularity in Jordan algebras. By C. E. Tsai. 727

On the spectra of classes of algebras. By G. Grätzer. 729

On \( p \)-abelian groups. By P. M. Weichsel. 736

Purely indecomposable torsion-free groups. By Phillip Griffith. 738

A theorem on multiplicative arithmetic functions. By Hubert Delange. 743

Some properties of integral closure. By W. J. Heinzer. 749

A note on certain generalized free products. By R. J. Gregorac. 754

A note on finitely generated groups. By R. J. Gregorac. 756

Shorter Notes

The Morse index theorem. By Howard Osborn. 759

Convolution of \( L^p \) functions. By N. W. Rickert. 762

On Okamura’s uniqueness theorem. By J. H. George. 764

Fourier coefficients of functions of bounded variation. By Mitchell Taibleson. 766
CONTENTS

Vol. 18, No. 4  AUGUST, 1967   Whole No. 106

On the measure of well-distributed sequences. By Alan Zame ............ 575
Differential systems on fibered manifolds. By A. M. Rodrigues ....... 580
Representation and computation of the pseudoinverse. By D. Showalter .................................................. 584
Semigroups satisfying a strong Følner condition. By L. N. Argabright and C. O. Wilde ........................................... 587
Singularity-free regions for solutions of systems of nonlinear complex differential equations. By D. V. V. Wend ................. 592
Asymptotic almost periodicity of solutions of a system of differential equations. By W. R. Utz and Paul Waltman ............. 597
Comparison and application of two Green’s matrices. By A. L. Deal, III .......................................................... 602
The asymptotic behavior of a class of nonlinear differential equations. By D. S. Cohen ................................................... 607
A transformation theorem on spectral measures. By Habib Salehi ..... 610
The moments of recurrence time. By J. Wolfowitz .................................................. 613
Schwartz distributions analytic in a parameter and associated semi-analytic functions. By C. A. Long ........................................... 615
Schauder decompositions in \((m)\). By D. W. Dean ......................... 619
A uniform boundedness theorem. By J. W. Brace and R. M. Nielsen .... 624
On the Lebesgue decomposition theorem. By R. A. Johnson ............. 628
Infinite subclasses of recursively enumerable classes. By J. B. Florence .......................................................... 633
The strong maximum modulus theorem for analytic functions into a Banach space. By Edward Thorp and Robert Whitley ....... 640
Representability of partial recursive functions in formal theories. By W. E. Ritter ..................................................... 647
Some linear topological properties of separable function algebras. By A. Pelczynski .................................................... 652
On the relationship between zero entropy and quasi-discrete spectrum for affine transformations. By Peter Walters .............. 661
On the problem of evanescent processes. By Z. Ditzian and M. Nadkarni .......................................................... 668
On similar bases in barrelled spaces. By O. T. Jones and J. R. Retherford .......................................................... 677
The homogeneous Hilbert boundary problem in a Banach algebra. II. By Dragiša Mitrović .................................................. 680
Homotopy periodicity of the classical Lie groups. By A. T. Lundell . 683
Absolute Baire sets. By Stelios Negrepontis ............................... 691
Adjunction spaces and the hereditary property. By B. H. McCandless . 695
Extending triangulations. By M. A. Armstrong .................................................. 701
Homotopy type comparison of a space with complexes associated with its open covers. By M. C. McCord .................................... 705
