Proceedings of the American Mathematical Society

This Journal is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the Proceedings contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

Shorter Notes. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Preparation of the Manuscript. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary. The submission of two copies of the manuscript is helpful, but by no means necessary.

Form of Manuscript. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article, followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

Submission of Manuscripts, Reprints and Address Changes. See the last page of this issue.

Subscription Information. Four volumes are planned for 1971. The subscription price is $72. Back issues of Volumes 1–16 are available at a price of $14 each. Volumes 17–19 at a price of $18 each, and Volumes 20–28 at a price of $30 each.

The Proceedings of the American Mathematical Society is published monthly. Subscriptions, orders for back numbers and inquiries in regard to non-delivery of current numbers should be addressed to the American Mathematical Society, P. O. Box 6248, Providence, R.I. 02904.

Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

RESEARCH AND REVIEW JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society

The journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and a department of research announcements.

The current issue of the journal lists editors to whom prospective publications should be addressed. Publication is bimonthly.

Transactions of the American Mathematical Society

This monthly journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than those in the Proceedings.

The current issue of the journal lists editors to whom prospective publications should be addressed.

Mathematics of Computation

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields.

Prospective publications should be addressed to the Editor, Professor Eugene Isaacson, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012. The author may suggest the name of an editor for review of his paper.

Mathematical Reviews

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Currently publication is monthly; two volumes are published each year, each volume consisting of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Soviet Mathematics—Doklady

This bimonthly is a translation journal containing the entire pure mathematics section of the Doklady Akademii Nauk SSSR, the Reports of the Academy of Sciences of the USSR. The Doklady for a year contains about 500 articles, each about 4 pages long.

Mathematics of the USSR—Izvestija

This journal is a cover-to-cover translation of Izvestija Akademii Nauk SSSR Serija Matematicheskaja, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published bimonthly starting with Volume 1, Number 1, January-February, 1967.

Mathematics of the USSR—Sbornik

This journal is a cover-to-cover translation of Matematicheskiy Sbornik (New Series), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper.

Algebra and number theory.
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520
Joseph J. Rotman, Mathematics Department, University of Illinois, Urbana, Illinois 61801

Modern or classical analysis.
Irving Glicksberg, Mathematics Department, University of Washington, Seattle, Washington 98105
W. H. J. Fuchs, Department of Mathematics, White Hall, Cornell University, Ithaca, New York 14850
Allen Shields, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104

Algebraic geometry.
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Set-theoretic and general topology.
Ernest Michael, Mathematics Department, University of Washington, Seattle, Washington 98105

Algebraic topology and all other types of geometry.
Emery Thomas, Mathematics Department, University of California, Berkeley, California 94720

Applied mathematics, differential equations, and related areas of analysis.
Fred Brauer, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706

Probability, statistics, and related fields.
Joshua Chover, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706

Logic, set theory, and related areas.
Robert I. Soare, Mathematics Department, University of Illinois at Chicago Circle, Chicago, Illinois 60680

All other communications should be addressed to the Managing Editor, W. H. J. Fuchs, at the above address.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.
On functions of bounded boundary rotation. By Ming-Chit Liu 345
On the conjugate points of fourth order, selfadjoint linear differential equations. By G. J. Etgen and J. B. Scott 349
Nontangential interpolating sequences and interpolation by normal functions. By Kam-Fook Tse 351
Subalgebras of $B(X)$. By Albert Wilansky 355
Regular matrices with nowhere dense support. By John Rainwater 361

D. Geometry
Families of mutually complementary topologies. By B. A. Anderson 362
Equilateral sets in Minkowski spaces. By C. M. Petty 369
Minimal hypersurfaces in an $m$-sphere. By Bang-Yen Chen 375

F. Statistics and Probability
On a sequence of almost deterministic pairwise independent random variables. By A. Joffe 381
On determination of the optimal factor of a nonnegative matrix-valued function. By Habib Salehi 383

G. Topology
Locally compact full homeomorphism groups are zero-dimensional. By James Keesling 390
Nets of subgroups and amenability. By I. Schochetman 397
Nonstable homotopy groups of Thom complexes. By P. J. Ledden 404
Topological spaces with a $\sigma$-point finite base. By C. E. Aull 411
Homogeneous inverse limit spaces with nonregular covering maps as bonding maps. By James T. Rogers, Jr. and Jeffrey L. Tollefson 417
Identities of group algebras. By Paul Milnes 421
Remark on discrete subgroups. By Joseph A. Wolf 423

Shorter Notes
Sums of cubes of Gaussian integers. By J. H. E. Cohn 426
