Proceedings of the American Mathematical Society

This Journal is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

Shorter notes. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Preparation of the manuscript. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary. Submission of two copies of the manuscript is desirable.

Form of manuscript. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

Submission of manuscripts, Reprints and Address changes. See the last page of this issue.

Galley proof. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

Backlog: None. Two-thirds of the papers currently being received by the editors will be published in 8–10 months.

Subscription information. Five volumes are planned for 1973; the subscription price is $100. Back number prices are as follows: Volumes 1–16, $14 per volume; Volumes 17–19, $18 per volume; Volumes 20–26, $30 per volume; Volumes 27–30, $27 per volume; Volumes 31–38, $30 per volume.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions, orders for back numbers and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P.O. Box 6248, Providence, R.I. 02904. Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

AMERICAN MATHEMATICAL SOCIETY
PROVIDENCE, RHODE ISLAND
RESEARCH AND REVIEW JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society

This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and a department of research announcements.

The current issue of the journal lists editors to whom prospective publications should be addressed. Publication is bimonthly.

Transactions of the American Mathematical Society

This monthly journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than those in the Proceedings.

The current issue of the journal lists editors to whom prospective publications should be addressed.

Mathematics of Computation

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields.

Prospective publications should be addressed to the Editor, Professor Eugene Isaacson, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012. The author may suggest the name of an editor for review of his paper.

Mathematical Reviews

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Currently publication is monthly; two volumes are published each year, each volume consisting of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Soviet Mathematics—Doklady

This bimonthly is a translation journal containing the entire pure mathematics section of the Doklady Akademii Nauk SSSR, the Reports of the Academy of Sciences of the USSR. The Doklady for a year contains about 500 articles, each about 4 pages long.

Mathematics of the USSR—Izvestija

This journal is a cover-to-cover translation of Izvestija Akademii Nauk SSSR Serija Matematicheskaja, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published bimonthly starting with Volume 1, Number 1, January–February 1967.

Mathematics of the USSR—Sbornik

This journal is a cover-to-cover translation of Matematicheskii Sbornik (New Series), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper.

Algebra and algebraic number theory.
Joseph J. Rotman, Department of Mathematics, University of Illinois, Urbana, Illinois 61801
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Modern or classical analysis and analytic number theory.
Jacob Feldman, Department of Mathematics, University of California, Berkeley, California 94720
Richard R. Goldberg, Department of Mathematics, University of Iowa, Iowa City, Iowa 52240
Allen L. Shields, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104

Algebraic geometry.
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Set-theoretic and general topology.
Thomas A. Chapman, Department of Mathematics, University of Kentucky, Lexington, Kentucky, 40506
W. Wistar Comfort, Department of Mathematics, Wesleyan University, Middletown, Connecticut 06457

Algebraic topology and all other types of geometry.
Glen E. Bredon, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903

Applied mathematics, differential equations, and related areas of analysis.
Fred G. Brauer, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

Probability, statistics, and related fields.
James D. Kuelbs, Department of Mathematics, 213 Van Vleck Hall, University of Wisconsin, Madison, Wisconsin 53706

Logic, set theory, and related areas.
Robert I. Soare, Department of Mathematics, University of Illinois at Chicago Circle, Chicago, Illinois 60680

Combinatorics and related areas of discrete mathematics.
Jay R. Goldman, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

All other communications should be addressed to the Managing Editor, Joseph J. Rotman, at the above address.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904.
CONTENTS—Continued from back cover

D. Geometry
The Gauss map in spaces of constant curvature. By Joel L. Weiner .......... 157
A global invariant of conformal mappings in space. By James H. White ... 162

F. Statistics and Probability
The Erdös-Rényi new law of large numbers for weighted sums. By Stephen A.
Book ................................................................. 165

G. Topology
The homotopy groups of spaces whose cohomology is a \( Z_\nu \) truncated polynomial
algebra. By Albert Shar ........................................... 172
Transitive actions on highly connected spaces. By Victor Schneider .......... 179
Realcompactifications of products of ordered spaces. By William G. McArthur 186
Sets of points of discontinuity. By Richard Bolstein ............................ 193
The product of totally nonmeagre spaces. By J. M. Aarts and D. J. Lutzer ... 198
Imbedding classes and \( n \)-minimal complexes. By Brian R. Ummel .......... 201
On weakly flat 1-spheres. By Robert J. Daverman .................................. 207
A study of monotonically normal spaces. By Carlos R. Borges .................. 211

Shorter Notes
A short proof of the martingale convergence theorem. By Charles W. Lamb ... 215
Differentiability of the metric projection in finite-dimensional Euclidean space.
By Edgar Asplund .................................................. 218
Corrigendum to "Cyclic vectors of induced representations". By A. Hulanicki
and T. Pytlik ......................................................... 220
