This Journal is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the Proceedings contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

Shorter notes. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Preparation of the manuscript. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary. Submission of two copies of the manuscript is desirable.

Form of manuscript. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

Submission of manuscripts, Reprints and Address changes. See the last page of this issue.

Galley proof. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

Backlog. None. Two-thirds of the papers currently being received by the editors will be published in 8–11 months.

Subscription information. Five volumes are planned for 1973; the subscription price is $100. Back number prices are as follows: Volumes 1–16, $14 per volume; Volumes 17–19, $18 per volume; Volumes 20–26, $30 per volume; Volumes 27–30, $27 per volume; Volumes 31–40, $30 per volume.

The Proceedings of the American Mathematical Society is published monthly. Subscriptions, orders for back numbers and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P.O. Box 6248, Providence, R.I. 02904. Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

INDEX TO VOLUME 40

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. ALGEBRA AND NUMBER THEORY

06. Order, Lattices, Ordered Algebraic Structures
   Martinez, Jorge. Some pathology involving pseudo l-groups as groups of divisibility, 333.
   Pierce, Keith R. The structure of a lattice-ordered group as determined by its prime subgroups, 407.
   Sherman, Gary J. Groups in which every maximal partial order is exhaustive, 83.

10. Number Theory
   Apostol, Tom M. Identities for series of the type \( \sum f(n)\mu(n)n^{-s} \), 341.
   Bender, Edward A. A lifting formula for the Hilbert symbol, 63.
   Hall, R. S. Beurling generalized prime number systems in which the Chebyshev inequalities fail, 79.
   Knopfmacher, J. A prime-divisor function, 373.
   Moreno, Carlos Julio. The Hoheisel phenomenon for generalized Dirichlet series, 47.

12. Algebraic Number Theory, Field Theory and Polynomials
   Kiltinen, John O. On the number of field topologies on an infinite field, 30.

13. Commutative Rings and Algebras
   Barshay, Jacob. Determinantal varieties, monomial semigroups, and algebras associated with ideals, 16.
   Boisen, Monte B., Jr. and Larsen, Max D. On Prüfer rings as images of Prüfer domains, 87.
   Choo, Koo-Guan. The projective class group of the fundamental group of a surface is trivial, 42.
   Eakin, Paul and Heinzer, W. More noneuclidian PID’s and Dedekind domains with prescribed class group, 66.
   Fossum, Robert. Commutative extensions by canonical modules are Gorenstein rings, 395.
   Huckaba, James A. On valuation rings that contain zero divisors, 9.
   Kiltinen, John O. On the number of field topologies on an infinite field, 30.
   Martinez, Jorge. Some pathology involving pseudo l-groups as groups of divisibility, 333.

14. Algebraic Geometry
   Barshay, Jacob. Determinantal varieties, monomial semigroups, and algebras associated with ideals, 16.

15. Linear and Multilinear Algebra; Matrix Theory (finite and infinite)
   Barshay, Jacob. Determinantal varieties, monomial semigroups, and algebras associated with ideals, 16.
INDEX TO VOLUME 40

Powers, N. C. Real-linear operators on quaternionic Hilbert space, 1.

16. Associative Rings and Algebras
Cohn, P. M. Prime rings with involution whose symmetric zero-divisors are nilpotent, 91.
Elliger, Sigurd. On simple injective rings, 93.
Fisher, Joe W. Finiteness conditions for projective and injective modules, 389.
Mason, Gordon. Solvable and nilpotent near-ring modules, 351.
Rowen, Louis Halle. On classical quotients of polynomial identity rings with involution, 23.

17. Nonassociative Rings and Algebras
Lewand, Robert. Extending a Jordan ring homomorphism, 57.

18. Category Theory, Homological Algebra
Beyl, F. Rudolf. The Schur multiplicator of metacyclic groups, 413.
Choo, Koo-Guan. The projective class group of the fundamental group of a surface is trivial, 42.
Fleury, Patrick J. Symmetric homology over rings containing the rationals, 69.
Mack, John, Morris, Sidney A. and Ordman, Edward T. Free topological groups and the projective dimension of a locally compact abelian group, 303.

20. Group Theory and Generalizations
Beyl, F. Rudolf. The Schur multiplicator of metacyclic groups, 413.
Kannappan, Pl. Characterization of certain groupoids and loops, 401.
Kee, Linda. A correction to “On Fricke moduli”, 60.
Knop, Larry E. Normal subgroups of groups which are products of two Abelian subgroups, 37.
Lyndon, Roger, McDonough, Thomas and Newman, Morris. On products of powers in groups, 419.
Wehrfritz, B.A.F. Conjugacy separating representations of free groups, 52.
Whittemore, Alice. On representations of the group of Listing’s knot by subgroups of SL(2, C), 378.

26. Real Functions
Darst, R. B. Zero sets of functions from non-quasi-analytic classes, 543.
Wright, F. M. and Ling, J. N. Admissible exponential representations and topological indices for functions of bounded variation, 431.

28. Measure and Integration
Braude, Eric John. Compact g-Souslin sets are Gδ’s, 250.
Glicksberg, I. Some remarks on absolute continuity on groups, 135.

30. Functions of a Complex Variable
Caldwell, William V. The dilatation of harmonic quasiconformal functions, 205.
Fricke, Gerd H. A note on multivalence of functions of bounded index, 140.
Krajikiewicz, P. Exceptional values of analytic functions, 159.
Leeman, George B., Jr. Some regularity theorems for typically real functions, 191.
Rahman, Q. I. On a property of rational functions. II, 143.

32. Several Complex Variables and Analytic Spaces
Chen, Su-shing. Bounded holomorphic functions in Siegel domains, 539.
33. Special Functions
    Wright, F. M. and Ling, J. N. Admissible exponential representations and topological indices for functions of bounded variation, 431.
    Wynn, P. On the zeros of certain confluent hypergeometric functions, 173.

34. Ordinary Differential Equations
    Buckholtz, J. D. Isomorphism theorems for infinite order differential operators, 533.
    Hallam, Thomas G. Classification of bounded solutions of a linear nonhomogeneous differential equation, 507.
    Wong, James S. W. A second order nonlinear oscillation theorem, 487.

35. Partial Differential Equations
    Greenlee, W. M. A quadratic eigenvalue problem, 123.

41. Approximations and Expansions
    Dunn, J. C. Inversion of normal operators by polynomial interpolation, 225.
    Micchelli, C. A. Chebyshev subspaces and convergence of positive linear operators, 448.

42. Fourier Analysis
    Kaufman, R. Planar Fourier transforms and Diophantine approximation, 199.
    Saworotnow, Parfeny P. Semigroups with positive definite structure, 421.
    Witsenhausen, H. S. Metric inequalities and the zonoid problem, 517.

43. Abstract Harmonic Analysis
    Gerl, Peter. Probability measures on semigroups, 527.
    Glicksberg, I. Some remarks on absolute continuity on groups, 135.
    Granirer, Edmond. Criteria for compactness and for discreteness of locally compact amenable groups, 43.
    Saworotnow, Parfeny P. Semigroups with positive definite structure, 421.

45. Integral Equations
    deFigueiredo, Djairo G. and Gupta, Chaitan P. On the variational method for the existence of solutions of Hammerstein type, 470.
    Nasim, C. The solution of an integral equation, 95.

46. Functional Analysis
    Akemann, Charles A. and Newberger, Stuart M. Physical states on a C*-algebra, 500.
    Aliprantis, C. D. Some order and topological properties of locally solid linear topological Riesz spaces, 443.
    Andersen, Kenneth F. On Lp norms and the equimeasurability of functions, 149.
    Behncke, Horst and Bös, Wolfgang. A class of C*-algebras, 128.
    Brown, H. I. and Cho, Tae-Geun. Subalgebras of B(c), 458.
Dean, David W. The equation \( L(E, X^{**}) = L(E, X)** \) and the principle of local reflexivity, 146.
Johnson, B. E. Automorphisms of commutative Banach algebras, 497.
Kallman, Robert R. A theorem on the restriction of Type I representations of a group to certain of its subgroups, 291.
Reich, Simeon. A remark on \( C_0 \) spaces, 215.
Samm, Sherwood. A bounded Hilbertian basis in \( C[0, 1] \), 465.
Senechalle, David A. Equations which characterize inner product spaces, 209.
Willig, Paul. Type II \( W^* \) algebras are not normal, 115.
——. On hyperfinite \( W^* \) algebras, 120.

47. Operator Theory
Buckholtz, J. D. Isomorphism theorems for infinite order differential operators, 533.
Dash, A. T. Tensor products and joint numerical range, 521.
Dean, David W. The equation \( L(E, X^{**}) = L(E, X)** \) and the principle of local reflexivity, 146.
Dunn, J. C. Inversion of normal operators by polynomial interpolation, 225.
deFigueiredo, Dairo G. and Gupta, Chaitan P. On the variational method for the existence of solutions of nonlinear equations of Hammerstein type, 470.
Greenlee, W. M. A quadratic eigenvalue problem, 123.
Helton, J. William. Continuity of linear fractional transformations on an operator algebra, 217.
Kim, Hong W. On compact operators in the weak closure of the range of a derivation, 482.
McGrath, S. A. Two ergodic theorems for convex combinations of commuting isometries, 229.
Powers, N. C. Real-linear operators on quaternionic Hilbert space, 1.
Sato, Ryotaro. On Akcoglu and Sucheston’s operator convergence theorem in Lebesgue space, 513.
Solomon, J. L. A note on the extension of contractive mappings, 319.
Terkelsen, Frode. Boundedness properties for semigroups of operators, 107.
Wadhwa, Bhushan L. Decomposable and spectral operators on a Hilbert space, 112.
Weber, R. E. Analytic functions, ideals, and derivation ranges, 492.
Wells, John C. and DePrima, Charles R. Local automorphisms are differential operators on some Banach spaces, 453.

49. Calculus of Variations and Optimal Control
deFigueiredo, Dairo G. and Gupta, Chaitan P. On the variational method for the existence of solutions of nonlinear equations of Hammerstein type, 470.

C. Applied Mathematics

76. Fluid Mechanics
Greenlee, W. M. A quadratic eigenvalue problem, 123.

D. Geometry

52. Convex Sets and Geometric Inequalities
Buchman, E. O. and Valentine, F. A. A characterization of convex surfaces which are \( L \)-sets, 235.
Schneider, Rolf. A characteristic extremal property of simplices, 247.
Stavrakas, Nick M. *A generalization of Tietze's theorem on convex sets in $R^3$, 565.*
Wolfe, Dorothy. *Metric inequalities and convexity, 559.*

53. *Differential Geometry*
Houh, Chorng-Shi. *Some totally real minimal surfaces in $CP^3$, 240.*
Jacobowitz, Howard. *Isometric embedding of a compact Riemannian manifold into Euclidean space, 245.*
Yen, Yi-Ching. *A characterization of four-dimensional Einstein manifolds, 554.*

E. *Logic and Foundations*

RESEARCH AND REVIEW JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society

This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and a department of research announcements.

The current issue of the journal lists editors to whom prospective publications should be addressed. Publication is bimonthly.

Transactions of the American Mathematical Society

This monthly journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than those in the Proceedings.

The current issue of the journal lists editors to whom prospective publications should be addressed.

Mathematics of Computation

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields.

Prospective publications should be addressed to the Editor, Professor Eugene Isaacson, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012. The author may suggest the name of an editor for review of his paper.

Mathematical Reviews

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Currently publication is monthly; two volumes are published each year, each volume consisting of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Soviet Mathematics—Doklady

This bimonthly is a translation journal containing the entire pure mathematics section of the Doklady Akademii nauk SSSR, the Reports of the Academy of Sciences of the USSR. The Doklady for a year contains about 500 articles, each about 4 pages long.

Mathematics of the USSR—Izvestija

This journal is a cover-to-cover translation of Izvestija Akademii nauk SSSR Serija Matematicheskaja, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published bimonthly starting with Volume I, Number 1, January–February 1967.

Mathematics of the USSR—Sbornik

This journal is a cover-to-cover translation of Matematicheskii Sbornik (New Series), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper.

Algebra and algebraic number theory.
Barbara L. Osofsky, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903
Joseph J. Rotman, Department of Mathematics, University of Illinois, Urbana, Illinois 61801
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Modern or classical analysis and analytic number theory.
Ronald G. Douglas, Department of Mathematics, State University of New York, Stony Brook, New York 11790
Peter L. Duren, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104
Jacob Feldman, Department of Mathematics, University of California, Berkeley, California 94720
Richard R. Goldberg, Department of Mathematics, University of Iowa, Iowa City, Iowa 52240

Algebraic geometry.
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Set-theoretic and general topology.
Thomas A. Chapman, Department of Mathematics, University of Kentucky, Lexington, Kentucky, 40506
W. Wistar Comfort, Department of Mathematics, Wesleyan University, Middletown, Connecticut 06457

Algebraic topology and all other types of geometry.
Glen E. Bredon, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903

Applied mathematics, differential equations, and related areas of analysis.
Fred G. Brauer, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

Probability, statistics, and related fields.
James D. Kuelbs, Department of Mathematics, 213 Van Vleck Hall, University of Wisconsin, Madison, Wisconsin 53706

Logic, set theory, and related areas.
Robert I. Soare, Department of Mathematics, University of Illinois at Chicago Circle, Chicago, Illinois 60680

Combinatorics and related areas of discrete mathematics.
Jay R. Goldman, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

All other communications should be addressed to the Managing Editor, Joseph J. Rotman, at the above address.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904.
CONTENTS—Continued from back cover

Analytic functions, ideals, and derivation ranges. By R. E. Weber ............... 492
Automorphisms of commutative Banach algebras. By B. E. Johnson .......... 497
Physical states on a $C^*$-algebra. By Charles A. Akemann and Stuart M. Newberger ................................................................. 500
Concave solutions of a Dirichlet problem. By H. Guggenheimer ............... 501
Classification of bounded solutions of a linear nonhomogeneous differential equation. By Thomas G. Hallam .................. 507
On Akcoglu and Sucheston's operator convergence theorem in Lebesgue space.
By Ryotaro Sato ........................................................................... 513
Metric inequalities and the zonoid problem. By H. S. Witsenhausen .... 517
Tensor products and joint numerical range. By A. T. Dash .................... 521
Probability measures on semigroups. By Peter Gerl ...................... 527
Isomorphism theorems for infinite order differential operators. By J. D. Buckholz ................................. 533
Bounded holomorphic functions in Siegel domains. By Su-shing Chen .... 539
Zero sets of functions from non-quasi-analytic classes. By R. B. Darst .... 543

D. Geometry

More on tight isometric immersions of codimension two. By Chang-shing Chen 545
A characterization of four-dimensional Einstein manifolds. By Yi-Ching Yen . 554
Metric inequalities and convexity. By Dorothy Wolfe ...................... 559
An invariant of conformal mappings. By Bang-yen Chen .................. 563
A generalization of Tietze's theorem on convex sets in $R^n$. By Nick M. Stavarakas .............................. 565

E. Logic and Foundations

Terms in cylindric algebras. By Charles Pinter ................................ 568
On retraceable sets with rapid growth. By T. G. McLaughlin ............ 573
The model theory of differential fields of characteristic $p 
eq 0$. By Carol Wood .... 577

F. Statistics and Probability

Abstract stationary processes. By Parfeny P. Saworotnow ................ 585

G. Topology

Further extending a complete convex metric. By Robert A. Dooley ....... 590
On characteristic classes of groups and bundles of $K(1, 1)$'s. By R. O. Hill, Jr. 597
On contractive mappings. By Michael A. Geraghty ..................... 604
Projectivity of the Whitehead square. By Duane Randall .................. 609
Certain subsets of products of $\theta$-refinable spaces are realcompact. By Phillip Zenor .............................................................. 612
Criteria for compactness and for discreteness of locally compact amenable groups.
By Edmond Granirer .................................................................... 615
Anosov flows and expansiveness. By Victor Norton and Thomas O'Brien ..... 625
On the groups of inertia of smooth manifolds. By Adil G. Naoum .... 629
Compactification and completion as absolute closure. By Anthony W. Hager 635.
AMS (MOS) Major Subject Headings ........................................... 639
Index to Volume 40 ..................................................................... 641
CONTENTS*

Vol. 40, No. 2 OCTOBER 1973 Whole No. 172

A. Algebra and Number Theory

Some pathology involving pseudo \( l \)-groups as groups of divisibility. By Jorge Martinez .......................................................... 333
Identities for series of the type \( \sum f(n)/\mu(n)n^{-t} \). By Tom M. Apostol ............... 341
Solvable and nilpotent near-ring modules. By Gordon Mason ........................................ 351
Permanent groups. II. By LeRoy B. Beasley and Larry Cummings ................................. 358
Minimal primes of ideals and integral ring extensions. By William Heinzler .................. 370
A prime-divisor function. By J. Knopfmacher .................................................. 373
On representations of the group of Listing’s knot by subgroups of \( SL(2, C) \). By Alice Whittemore .................................................. 378
On special linear characters of free groups of rank \( n \geq 4 \). By Alice Whittemore ........ 383
Finiteness conditions for projective and injective modules. By Joe W. Fisher .......... 389
Commutative extensions by canonical modules are Gorenstein rings. By Robert Fossum ........ 395
Characterization of certain groupoids and loops. By Pl. Kannappan ....................... 401
The structure of a lattice-ordered group as determined by its prime subgroups. By Keith R. Pierce ...................................... 407
The Schur multiplicator of metacyclic groups. By F. Rudolf Beyl ............................ 413
On products of powers in groups. By Roger Lyndon, Thomas McDonough and Morris Newman ................................................ 419

B. Analysis

Semigroups with positive definite structure. By Parfeny P. Saworotnow ................. 421
A generalization of the Banach-Stone theorem. By Bahattin Cengiz .......................... 426
Admissible exponential representations and topological indices for functions of bounded variation. By F. M. Wright and J. N. Ling ......................... 431
On approximation in the Bers spaces. By Charles K. Chui ...................................... 438
Some order and topological properties of locally solid linear topological Riesz spaces. By C. D. Aliprantis ........................................ 443
Chebyshev subspaces and convergence of positive linear operators. By C. A. Micchelli ................................................................. 448
Local automorphisms are differential operators on some Banach spaces. By John C. Wells and Charles R. DePrima .................................. 453
Subalgebras of \( B[e] \). By H. I. Brown and Tae-Geun Cho ...................................... 458
A bounded Hilbertian basis in \( C[0, 1] \). By Sherwood Samn .................................. 465
On the variational method for the existence of solutions of nonlinear equations of Hammerstein type. By Dairo G. deFigueiredo and Chaitan P. Gupta .................. 470
Reducing decompositions for strictly cyclic operators. By Richard Bouldin .......... 477
On compact operators in the weak closure of the range of a derivation. By Hong W. Kim ................................................................. 482
A second order nonlinear oscillation theorem. By James S. W. Wong ....................... 487

* The volume index will contain a mapping showing the correspondence between sections A–G and the AMS (MOS) subject classification numbers.
