Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics. The following statement was adopted by order of the Council of the American Mathematical Society on January 22, 1975.

Statement of Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

Blind Refereeing: Author's Responsibility

In January, 1975, the Council of the Society selected the Proceedings for a two-year experiment with "blind refereeing". Policy now in effect is that an author submitting a paper to the Proceedings shall send two manuscripts: one containing all pertinent personal data and the other not containing the author's name or institutional affiliation. This second copy will be refereed, and the Editor shall not reveal the name or institution of the author to the referee. It is not the responsibility of the Editor to suppress evidence internal to the paper, including the bibliography, from which the referee might determine the author's identity.

Authors are cautioned that the Editor may not initiate the refereeing process until two copies of the manuscript have been received from the author.

PUBLICATION CHARGES: The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the Notices of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

SUBSCRIPTION INFORMATION: Subscription prices for Volumes 54–61 (1976) are list $176.00, member $88.00. Back number prices per volume for Volumes 1–53 (1950–1975) are list $30.00, member $22.50.

BACKLOG: None. Papers currently being received by the editors will be published in 9–11 months.

MICROFILM EDITIONS: Back volumes of PROCEEDINGS are also available on 16 mm microfilm, either negative or positive, and may be mounted on spools or in Eastman or 3M cartridges. Volumes 1–46 (1950–1974) are mounted on 9 spools and cost $310.00 for spools or $337.00 for cartridges. Only current subscribers are eligible to purchase back volumes on microfilm.

THE PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions and orders for publications of the American Mathematical Society should be addressed to the American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Second class postage paid at Providence, Rhode Island, and additional mailing offices.

Zenor, Phillip. *Countable paracompactness of F₀-sets*, 201.

Preparation and Submission of Manuscript

1. Articles for insertion should be typewritten, double spaced, and no more than 11 pages (8½" x 11") long. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

3. Very short notes not to exceed 1 printed page are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940.

Galley Proof

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the AMS (MOS) Subject Classification Scheme (1970) and describe the fields being handled by the editor.

## CONTENTS

**Vol. 55, No. 2  MARCH 1976  Whole No. 201**

### A. ALGEBRA AND NUMBER THEORY

- An application of representation theory to $P$-algebras. By JØRN B. OLSSON and AMITAI REGEV ................................................................. 253
- The existence of dual modules. By D. D. ANDERSON ........................................ 258
- On the order and degree of solutions to pure equations. By LAWRENCE J. RISMAN .... 261
- The prefrattini residual. By H. BECHTELL ...................................................... 267
- Commutativity of endomorphism rings of ideals. II. By S. ALAMELU .................... 271
- Lie and Jordan ideals in prime rings with derivations. By MANSOOR AHMAD ............. 275
- On groups of finite weight. By P. KUTZKO ..................................................... 279
- The unity in rings with Gabriel and Krull dimension. By F. HANSEN ....................... 281
- $p$th powers of distinguished subfields. By NICHOLAS HEEREMA ............................. 287
- The $\overline{\mu}$-invariants for groups. By M. A. GUTIERREZ ............................... 293
- Bounds on positive integral solutions of linear diophantine equations. By I. BOROSH and L. B. TREYBIG ......................................................... 299

### B. ANALYSIS

- An analogue of some inequalities of P. Turán concerning algebraic polynomials having all zeros inside $[-1, +1]$. By A. K. VARMA ................................................ 305
- A comparison theorem. By H. GUGGENHEIMER ............................................ 310
- Sequential convergence to invariance in $BC(G)$. By ROBERT SINE ....................... 313
- A perturbation theorem for complete sets of complex exponentials. By ROBERT M. YOUNG ................................................................. 318
- On nonexpansive mappings. By L. A. KARLOVITZ ..................................... 321
- Perturbations of groups of automorphisms of von Neumann algebras. By M. REYNOLDS ................................................................. 326
- The local resolvent set of a locally Lipschitzian transformation is open. By E. LEE MAY, JR ................................................................. 329
- On exposed points of the range of a vector measure. II. By R. ANANTHARAMAN .... 334
- Hyperfiniteness and the Halmos-Rohlin theorem for nonsingular abelian actions. By J. FELDMAN and D. A. LIND ........................................... 339
- A commutative Banach algebra which factorizes but has no approximate units. By MICHAEL LEINERT ................................................................. 345
- Nets of extreme Banach limits. By RODNEY NILLSEN ................................... 347
- Measurability and continuity conditions for nonlinear evolutionary processes. By JOHN M. BALL ................................................................. 353
- On a convexity property of the range of a maximal monotone operator. By JEAN-PIERRE GOSSEZ ................................................................. 359
- Idempotents of norm one and Banach algebra representations of compact groups. By N. J. KALTON and G. V. WOOD ........................................... 361
- Linear dynamical systems. By E. FLYTZANIS ............................................ 367
- Dominated estimates in Hilbert space. By M. A. AKCOGLU and H. D. B. MILLER ... .... 371

### C. APPLIED MATHEMATICS

- A remark on Nelson's best hypercontractive estimates. By BARRY SIMON ............... 376

### D. GEOMETRY

- A characterization of the 2-sphere by eigenfunctions. By SHIU-YUEN CHENG .......... 379
- Characterizations of the sphere by the curvature of the second fundamental form. By UDO SIMON ................................................................. 382
