Statement of Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

Blind Refereeing: Author's Responsibility

In January, 1975, the Council of the Society selected the Proceedings for a two-year experiment with "blind refereeing". Policy now in effect is that an author submitting a paper to the Proceedings shall send two manuscripts: one containing all pertinent personal data and the other not containing the author's name or institutional affiliation. This second copy will be refereed, and the Editor shall not reveal the name or institution of the author to the referee. It is not the responsibility of the Editor to suppress evidence internal to the paper, including the bibliography, from which the referee might determine the author's identity.

Authors are cautioned that the Editor may not initiate the refereeing process until two copies of the manuscript have been received from the author.

Publication Charges: The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the Notices of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

Subscription Information: Subscription prices for Volumes 54-61 (1976) are list $176.00, member $88.00. Back number prices per volume for Volumes 1-53 (1950-1975) are list $30.00, member $22.50.

Backlog: None. Papers currently being received by the editors will be published in 9-11 months.

Microfilm Editions: Back volumes of PROCEEDINGS are also available on 16 mm microfilm, either negative or positive, and may be mounted on spools or in Eastman or 3M cartridges. Volumes 1-53 (1950-1975) are mounted on 11 spools and cost $530.00 for spools or $566.00 for cartridges. Only current subscribers are eligible to purchase back volumes on microfilm.

THE PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions and orders for publications of the American Mathematical Society should be addressed to the American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Second class postage paid at Providence, Rhode Island, and additional mailing offices.

INDEX TO VOLUME 57

*Starred items are "Shorter Notes"

Bouldin, Richard. The triangular representation of C. Apostol, 256.

Buninas, Martin. The spaces lip α and certain other spaces have duals with Cesàro bases, 233.

Byrd, Richard D. and Lloyd, Justin T. Kernels in lattice-ordered groups, 16.

Christensen, Jens Peter Reus. Codimension of some subspaces in a Fréchet algebra, 276.

Clarke, Francis. The commutator subgroup of a free topological group need not be projective, 354.

Cohen, M. E. Generating functions for the Jacobi polynomial, 271.

Cook, R. J. Diophantine inequalities with mixed powers (mod 1), 29.

Cornish, William H. A sheaf representation of distributive pseudocomplemented lattices, 11.

Cross, Joe. The strong dual of a strongly nuclear space need not be nuclear, 250.

Curran, P. M. Fixed-point-free actions on a class of abelian groups, 189.

Daverman, Robert L. Singular regular neighborhoods and local flatness in codimension one, 357.

Ellentuck, Erik. Combinatorial functions and indecomposable cardinals, 311.

Farrell, F. Thomas. The signature and arithmetic genus of certain aspherical manifolds, 165.

Finlayson, H. C. Gross' abstract Wiener measure on C[0, ∞), 297.

*Freeman, Michael. The Levi form and local complex foliations, 369.

Fritsch, Rudolf. Ext à la Yoneda without the Schanuel Lemma, 39.

Gechter, Jerry. Artin root numbers for real characters, 35.

Geman, Donald. A note on the continuity of local times, 321.

Gendler, Alan. Extreme operators in the unit ball of L(C(X), C(Y)) over the complex field, 85.

Glass, A. M. W. and McCleary, Stephen H. Some l-simple pathological lattice-ordered groups, 221.

Goffman, Casper, Moran, Gadi and Waterman, Daniel. The structure of regulated functions, 61.

Govil, N. K., Jain, V. K. and Labelle, G. Inequalities for polynomials satisfying p(z) ≡ z^n p(1/z), 238.

Guaspari, David and Harrington, Leo. Characterizing C_3 (the largest countable Π^0_3 set), 127.

Hamrick, G. C. See Alexander, J. P.

Harrington, Leo. See Guaspari, David.

Hedlund, James H. Strongly strictly cyclic weighted shifts, 119.

Hensley, Douglas. The logarithmic center of a planar region, 266.

*Herrington, Larry L. and Long, Paul E. A characterization of minimal Hausdorff spaces, 373.

376

Hooper, R. C. *Locally compact subgroups of metrizable topological abelian groups*, 159.

Hung, H. H. *One more metrization theorem*, 351.

Jackson, L. K. *A compactness condition for solutions of ordinary differential equations*, 89.

———. *A Nagumo condition for ordinary differential equations*, 93.

Jain, V. K. See Govil, N. K.

Johnson, H. H. See Chakerian, G. D.

Kan, Daniel M. and Miller, Edward Y. *Sullivan's de Rham complex is definable in terms of its 0-forms*, 337.

Knus, M. A. See DeMeyer, F. R.

Kotzmann, Ernst and Rindler, Harald. *Central approximate units in a certain ideal of L¹(G)*, 155.

Labelle, G. See Govil, N. K.

Lacey, E. and Wojtaszczyk, P. *Nonatomic Banach lattices can have l₁ as a dual space*, 79.

Lee, Sung J. *A note on generalized resolvents for ordinary differential operators*, 279.

Levitt, Norman. *Small sets of homeomorphisms which control manifolds*, 173.

Lin, Michael. See Jones, Lee K.

Lloyd, Justin T. See Byrd, Richard D.

*Long, Paul E. See Herrington, Larry L.*

McCleary, Stephen H. See Glass, A. M. W.

*Michael, E. Quotients of countable complete metric spaces*, 371.

Miller, Edward Y. See Kan, Daniel M.

Moran, Gadi. See Goffman, Casper.

Olesen, Dorte. *A generalization of a theorem by Bochner*, 115.

Parson, L. Alayne. *Dedekind sums and noncongruence subgroups of the Hecke groups G(√2) and G(√3)*, 194.

Quine, J. R. *On univalent polynomials*, 75.

Radu, V. *Equicontinuity, affine mean ergodic theorem and linear equations in random normed spaces*, 299.

Rajagopalan, M. See Ginsburg, John.

Rindler, Harald. *Uniform distribution on locally compact groups*, 130.

———. See Kotzmann, Ernst.

Robertson, M. M. *Partitions with congruence conditions*, 45.

Schenkman, Eugene. *Groups with a finite number of Sylow $\Delta$-subgroups*, 205.

Sharpe, Kevin J. *Relating group topologies by their continuous points*, 179.

Wong, Chi Song. *On a fixed point theorem of contractive type*, 283.

Woods, R. Grant. See Ginsburg, John.

Zelmanowitz, J. M. *The finite intersection property on annihilator right ideals*, 213.

Zielezny, Z. See Sznajder, S.
Preparation and Submission of Manuscript

1. Articles for insertion should be typewritten, double spaced, and no more than 11 pages (8½" × 11") long. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

3. Very short notes not to exceed 1 printed page are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940.

Galley Proof

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the AMS (MOS) Subject Classification Scheme (1970) and describe the fields being handled by the editor.

LOGIC AND FOUNDATIONS (02 04)
K. Jon Barwise, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706
