Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

1. On January 22, 1975, the Council of the American Mathematical Society voted:

   "To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

   "Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department."

2. On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 73–77 (1979) are $150.00 list; $75.00 member. Combination paper and microform (microfiche or microfilm) subscription prices are $200.00 list; $100.00 member. Microfiche of each issue will be mailed the fastest way before the camera copy is sent to the printer.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–53, $30.00 list, $22.50 member; for Volumes 54–67, $34.00 list, $25.50 member; for Volumes 68–72, $42.00 list, $31.50 member. Back volumes are also available on 16mm positive or negative microfilm. The microfilm may be mounted on spools or in Kodak or 3M cartridges. Only current subscribers are eligible to purchase back volumes on microfilm. Write to the AMS for a detailed price list.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Second class postage paid at Providence, Rhode Island, and additional mailing offices.
U. S. Postal Service Publication No. 445600.

Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 11 (8½" x 11") pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. See page 109 of the February 1978 NOTICES of the American Mathematical Society for a statement concerning copyright policy. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

REPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

BACKLOG. None. Papers currently being received by the editors will be published in 9–11 months.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the AMS (MOS) Subject Classification Scheme (1970) and describe the fields being handled by the editor.

LOGIC AND FOUNDATIONS (02 04)
Paul C. Eklof, Department of Mathematics, University of California, Irvine, California 92717

COMBINATORICS AND DISCRETE MATHEMATICS (05 15)
Thomas H. Brylawski, Department of Mathematics, University of North Carolina, Chapel Hill, North Carolina 27514

COMMUTATIVE ALGEBRA (06 12 13 14 15 18)
David Eisenbud, Department of Mathematics, Brandeis University, Waltham, Massachusetts 02154

GENERAL ALGEBRA (16 17 18 08)
Robert L. Wilson, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903

GROUP THEORY (20)
David M. Goldschmidt, Department of Mathematics, University of California at Berkeley, Berkeley, California 94720

ALGEBRAIC AND DIFFERENTIAL TOPOLOGY (55 57 58)
Reinhard E. Schultz, Department of Mathematics, Purdue University, West Lafayette, Indiana 47907

REAL VARIABLES (26 28 40)
J. Jerry Uhl, Jr., Department of Mathematics, University of Illinois, Urbana, Illinois 61801

COMPLEX VARIABLES AND NUMBER THEORY (10 30 32)
W. E. Kirwan, Department of Mathematics, University of Maryland, College Park, Maryland 20742
Lawrence A. Zalcman, Department of Mathematics, University of Maryland, College Park, Maryland 20742

DIFFERENTIAL EQUATIONS (33 34 35 39 49)
George R. Sell, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

GENERAL ANALYSIS (41 42 43 44 45)
Richard R. Goldberg, Department of Mathematics, Vanderbilt University, Nashville, Tennessee 37235

FUNCTIONAL ANALYSIS AND OPERATOR THEORY (46 47)
Ronald G. Douglas, Department of Mathematics, State University of New York at Stony Brook, Stony Brook, New York 11790

FUNCTIONAL ANALYSIS AND CONVEXITY (46 52)
Robert R. Phelps, Department of Mathematics GN-50, University of Washington, Seattle, Washington 98195

COMPLEX VARIABLES, FUNCTIONAL ANALYSIS AND OPERATOR THEORY (30 46 47)
Donald E. Sarason, Department of Mathematics, University of California at Berkeley, Berkeley, California 94720

LIE GROUPS AND GEOMETRY (22 50 53)
Joseph A. Wolf, Department of Mathematics, University of California at Berkeley, Berkeley, California 94720

GENERAL TOPOLOGY (54)
David J. Lutzer, Department of Mathematics, Texas Tech University, Lubbock, Texas 79409

THOMAS A. CHAPMAN, Department of Mathematics, University of Kentucky, Lexington, Kentucky 40506

PROBABILITY AND OTHER FIELDS (31 60-99 inclusive)
Thomas G. Kurtz, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

All other communications should be addressed to the Managing Editor, Joseph A. Wolf, at the above address.
A combinatorial formula for normal Stiefel-Whitney classes. By T. BANCHOFF and C. McCORRY ................................................................. 171

H. COMBINATORICS
Some extensions of the Brock-Carlitz identity. By M. E. COHEN and H. S. SUN .......... 178

SHORTER NOTES
A classical variational principle for periodic Hamiltonian trajectories. By FRANK H. CLARKE ........................................................................ 186
CONTENTS

Vol. 76, No. 1 August 1979 Whole No. 242

A. ALGEBRA AND NUMBER THEORY

The Noetherian property for quotient rings of infinite polynomial rings. By ROBERT GILMER and WILLIAM HEINZER .................................................. 1
The essential closure of C{X). By MARLOW ANDERSON ................................. 8
A PI-algebra which is not PI when an inverse is adjoined. By ROBERT A. INDIK .. 11
A theorem on partially ordered sets of order-preserving mappings. By DWIGHT DUFFUS and RUDOLF WILLE .......................................................... 14
The étale homotopy type of varieties over R. By DAVID A. COX .................. 17
A condition equivalent to the solvability of the endomorphism problem for free groups. By CHARLES C. EDMUNDS .............................................. 23
Weak q-rings with zero singular ideal. By SAAD MOHAMED and SURJEET SINGH 25
Modular group algebras of totally projective p-primary groups. By WARREN MAY .. 31
Separated G_{a}-actions. By ANDY R. MAGID ............................................ 35
A realization of the additive Witt group. By KENNETH NEUMANN and MOSS E. SWEEDLER .................................................................................. 39
Group actions on Q-F-rings. By J. L. PASCAUD and J. VALETTE .................... 43
A remark on Schur indices of p-groups. By TOSHIHIKO YAMADA .................. 45

B. ANALYSIS

Locally compact groups which are amenable as discrete groups. By CHING CHOU .......... 46
Hille-Wintner type comparison theorems for second-order ordinary differential equations. By G. J. BUTLER ................................................................. 51
Constructive solution of the 1918 problem of Lord Rayleigh. By M. N. McALLISTER, S. M. ROHDE and G. T. McALLISTER ........................................ 60
Semiclosed operators in Hilbert space. By WILLIAM E. KAUFMAN .................. 67
An approximation of integrable functions by step functions with an application. By M. G. CRANDALL and A. PAZY ................................................. 74
Interpolation in Hp-spaces. By KNUD ØYMA .............................................. 81
Robertson’s conjecture on the coefficients of close-to-convex functions. By Y. LEUNG 89
An oscillation theorem for characteristic initial value problems for nonlinear hyperbolic equations. By NORIO YOSHIDA ........................................... 95
Compact operators with root vectors that span. By D. DECKARD, C. FOIAȘ and C. PEARCY .............................................................. 101
Some characterizations of hermitian operators and related classes of operators. I. By CHE-KAO FONG and VASILE I. ISTRĂTESCU ........................................ 107
Inner limit derivations. By RICHARD HERMAN ........................................... 113
Near-derivations and information functions. By JOHN LAWRENCE, GEOFF MESS and FRANK ZORZITTO ...................................................... 117
Mean boundary value problems for a class of elliptic equations in E^{3}. By PETER A. MCCOY ................................................................. 123
An extreme point in H^{\infty}(U^{2}). By NATHANIEL R. RIESENBERG .............. 129
A Schröder-Bernstein theorem in Baer*-rings with lattice-theoretic proof. By JOSUKE HAKEDA ................................................................. 131

D. GEOMETRY

An inequality for double tangents. By BENJAMIN HALPERN .......................... 133
Deformability of a submanifold in a Euclidean space whose image by the Gauss map is fixed. By YOSIO MUTÔ ......................................................... 140
Existence of closed timelike geodesies in Lorentz spaces. By FRANK J. TIPLER .. 145

G. TOPOLOGY

Poincaré duality and fibrations. By DANIEL HENRY GOTTLIB .................... 148
A surjective characterization of Dugundji spaces. By BURKHARD HOFFMANN .... 151
The Milnor signatures of compound knots. By C. KEARTON .......................... 157
Excess and conjugation in the Steenrod algebra. By ANDREW M. GALLANT .... 161
Demension and measure. By JUSSI VÄISÄLÄ .............................................. 167
The Knapp-Stein dimension theorem for p-adic groups. Correction. By ALLAN J. SILBERGER ................................................................. 169
