Proceedings of the American Mathematical Society
This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

1. On January 22, 1975, the Council of the American Mathematical Society voted:
   “To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

   “Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counter-example, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.”

2. On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

   Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author’s name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 84–86 (1982) are $190.00 list; $95.00 member. Combination paper and microform (microfiche or microfilm) subscription prices are $254.00 list; $127.00 member. Microfiche of each issue will be mailed the fastest way before the camera copy is sent to the printer.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–77, $52.00 list, $39.90 member; for Volumes 78–83, $84.00 list, $63.00 member. Beginning with Volume 68, back volumes are available in microfiche or microfilm; volumes before Volume 68 are available in microfilm only. The microfilm may be mounted on spools or in Kodak or 3M cartridges. Only current subscribers are eligible to purchase back volumes on microform. Write to the AMS for a detailed price list.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 11 ($8\frac{1}{2}'' \times 11''$) pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The 1980 Mathematics Subject Classification with instructions for its use can be found in the 1978 Subject Index to Mathematical Reviews.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

REPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

BACKLOG. 100 pages. Papers currently being received by the editors will be published in 10–12 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the 1980 Mathematics Subject Classification and describe the fields being handled by the editor.

CONTENTS

Vol. 86, No. 4                                   December 1982                                 Whole No. 282

A. ALGEBRA AND NUMBER THEORY

The recovery of some Abelian groups from their socles. By PAUL HILL .......................... 553
Height one differential ideals in polynomial rings. By MATTHEW S. CHEN ....................... 561
On heminearness spaces. By MARYAM SHAYEGAN HASTINGS ........................................... 567
A generalization of a theorem of Ayoub and Chowla. By DON REDMOND .......................... 574

B. ANALYSIS

Quantitative behaviour of the norms of an analytic measure. By LOUIS PIGNO and BRENT SMITH .......................................................... 581
Unstable weak attractors. By RONALD A. KNIGHT ......................................................... 586
Strongly ergodic sequences of integers and the individual ergodic theorem. By J. R. BLUM and J. I. REICH ......................................................... 591
Removable singularities for $H^p$-functions. By PENTTI JÄRVI ...................................... 596
Factorization in codimension one ideals of group algebras. By GEORGE WILLIS ............... 599
Finite type functions as limits of exponential sums. By D. J. NEWMAN ......................... 602
A random ergodic theorem in von Neumann algebras. By NGHIEM DANG-NGOC .................. 605
Norm attaining operators and simultaneously continuous retractions. By JERRY JOHNSON and JOHN WOLFE .............................................. 609
A counterexample to a conjecture in linear second-order differential equations. By KÁLMÁN SZABÓ ............................................................... 613
Uniqueness of solutions of partial differential equations when the initial surface is characteristic at a point. By LETITIA J. KORBLY ................................. 617

C. APPLIED MATHEMATICS

A theory of interval iteration. By L. B. RALL ............................................................. 625

D. GEOMETRY

Inequalities of Gauss-Bonnet type for a convex domain. By B. V. DEKSTER ..................... 632

F. STATISTICS AND PROBABILITY

Orthogonal expansions of vectors in a Hilbert space for non-Gaussian measures. By YOSHI-AKI OKAZAKI ......................................................... 638

G. TOPOLOGY

Geometric taming of compacta in $E^n$. By DAVID G. WRIGHT ..................................... 641
Taming compacta in $E^4$. By JOHN J. WALSH and DAVID G. WRIGHT ............................ 646
Theorems of Namioka and R. E. Johnson type for upper semicontinuous and compact valued set-valued mappings. By JENS PETER REUS CHRISTENSEN ............................................ 649
Locally contractive and expansive mappings. By THAKYIN HU and HARVEY ROSEN ........ 656
Inner amenability and fullness. By MARIE CHODA ..................................................... 663
A short proof that compact quasidevelopable spaces are metrizable. By H. R. BENNETT .... 667
An extremally disconnected Dowker space. By ALAN DOW and JAN van MILL ................. 669
Spaces for which the generalized Cantor space $2^f$ is a remainder. By YUSUF ÜNLÜ .... 673
Detecting cohomologically stable mappings. By PHILIP L. BOWERS ............................... 679
Lattices of continuous monotonic functions. By MIRIAM COHEN and MATATYAHU RUBIN .... 685

SHORTER NOTES

The nonexistence of "liftings" for arithmetic density. By H. V. WEIZSÄCKER .................. 692
A lower bound on the Cesàro operator. By RUSSELL LYONS ........................................ 694
Dickson's pseudodeterminant without matrices. By LARRY C. GROVE ............................. 695
Index to Volume 86 .......................................................... 697
