Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 15 typed pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 96–98 (1986) are $369.00 list; $295.00 institutional member; $221.00 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25.00; subscribers in India must pay a postage surcharge of $38.00. Combination paper and microfiche subscription prices are $491.00 list; $392.00 institutional member. Microfiche of each issue will be mailed the fastest way possible before the camera copy is sent to the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–89, $110.00 list, $88.00 institutional; for Volumes 90–92, $125.00 list; $100.00 institutional member; for Volumes 93–95, $168.00 list; $134.00 institutional member.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901-1571. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

PROCEEDINGS of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940

Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 15 (8½" × 11") pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification (1985 Revision) representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual subject index of Mathematical Reviews, published with the December issue starting in 1984.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

OFFPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding offprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

BACKLOG. 150 pages. Papers currently being received by the editors will be published in 9–11 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classification from the 1980 Mathematics Subject Classification (1985 Revision) and describe the fields being handled by the editor.

CONTENTS

Vol. 98, No. 4

December 1986

Whole No. 330

A. ALGEBRA AND NUMBER THEORY

Some remarks on affine rings. By S. Montgomery and L. W. Small……………….. 537
Jacobson radical of filtered algebras. By Erazm J. Behr………………………… 545
Toposes, monoid actions, and universal coalgebra. By Robert C. Davis…………. 547
On the primitivity of polynomial rings with nonprimitive coefficient rings. By T. J. Hodges 553
The word problem for free lattice-ordered groups (and some other free algebras). By Trevor Evans………………….. 559
The restricted tangent bundle of a rational curve on a quadric in P^3. By Maria-Grazia Ascenzi………………………… 561
Polynomial rings over Goldie rings are often Goldie. By Victor Camillo and Robert Guralnick……………………………… 567
A note on the automorphism groups of Lie module triple systems. By Nora C. Hopkins 569
Four algebraic spectral properties. By Frederick W. Call………………………… 576
On two theorems of Thompson. By Zhang Guangxiang………………………… 579
On a problem of Magnus. By Alexander Lubotzky……………………………… 583

B. ANALYSIS

Morrey space. By Cristina T. Zorko…………………………………………………. 586
On the pointwise convergence of the eigenfunction expansion associated with some iterated boundary value problems. By Jyoti Das and Prabir Kumar Sengupta………………….. 593
Approximation by rational functions. By Ronald A. DeVore…………………… 601
A lattice-theoretic equivalent of the invariant subspace problem. By W. E. Longstaff …………………….. 605
On the stable range of uniform algebras and H^\infty. By Gustavo Corach and Fernando Daniel Suárez………………….. 607
Extreme points in C(K, L^1(\mu)). By Ryszard Grząślewicz…………………….. 611
The parametric Gauss-Green theorem. By M. Ortel and W. Schneider………… 615
A new proof of a weighted inequality for the ergodic maximal function. By Kenneth F. Andersen…………………………… 619

C. APPLIED MATHEMATICS

The Borsuk-Ulam theorem and bisection of necklaces. By Noga Alon and Douglas B. West……………………………… 623

D. GEOMETRY

Some new examples of nonorientable minimal surfaces. By M. Elisa G. G. de Oliveira 629
On the topology of self-dual 4-manifolds. By Claude LeBrun…………………… 637

F. STATISTICS AND PROBABILITY

A strengthening of Leth’s uniqueness condition for sequences. By Jerome Malitz…………… 641

G. TOPOLOGY

On infinite dimensional features of proper and closed mappings. By R. S. Sadyrkhanov 643
The singular cohomology of the inverse limit of a Postnikov tower is representable. By Jerzy Dydak and Ross Geoghegan………………….. 649
Ergodic theorems for Fourier transforms of noncommutative analogues of vector measures. By Kari Ylinen………………….. 655
Approximate selections and fixed points for upper semicontinuous maps with decomposable values. By Arrigo Cellina, Giovanni Colombo and Alessandro Fonda………………….. 663
General position theorems for generalised manifolds. By J. L. Bryant……………… 667
Baker functions for compact Riemann surfaces. By R. J. Schilling………………… 671
Locally compact normal metalindelöf spaces may not be paracompact: An application of uniformization and Suslin lines. By Stephen Watson………………….. 676
Relationship between the meet and join operators in the lattice of group topologies. By Bradd Clark and Victor Schneider………………….. 681

Index to Volume 98…………………………………………………………………….. 683
