Proceedings of the American Mathematical Society
This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy
To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 15 typed pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 99–101 (1987) are $391.00 list; $313.00 institutional member; $235.00 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25.00; subscribers in India must pay a postage surcharge of $38.00. Combination paper and microfiche subscription prices are $520.00 list; $416.00 institutional member. Microfiche of each issue will be mailed the fastest way possible before the camera copy is sent to the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–89, $110.00 list, $88.00 institutional; for Volumes 90–92, $125.00 list; $100.00 institutional member; for Volumes 93–95, $168.00 list; $134.00 institutional member; for Volumes 96–98, $185.00 list; $148.00 institutional members.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901-9930. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

PROCEEDINGS of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940

Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 15 typed pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.
Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 15 (8 1/2" × 11") pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification (1985 Revision) representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual subject index of Mathematical Reviews, published with the December issue starting in 1984.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceeding. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

OFFPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding offprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author’s paper for publication dependent upon payment of the page charge.

BACKLOG. 150 pages. Papers currently being received by the editors will be published in 9–11 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner’s consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classification from the 1980 Mathematics Subject Classification (1985 Revision) and describe the fields being handled by the editor.

LOGIC AND FOUNDATIONS (03 04)
Thomas J. Jech, Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802

COMBINATORICS AND DISCRETE MATHEMATICS (05 15)
Thomas H. Brylawski, Department of Mathematics, University of North Carolina, Chapel Hill, North Carolina 27514

COMBINATORICS, COMPUTER SCIENCE AND INFORMATION THEORY (05 68 94)
Andrew Odlyzko, Room 2C-370, Bell Laboratories, Murray Hill, New Jersey 07974

COMMUTATIVE ALGEBRA (06 12 13 14 15 18)
Louis J. Ratliff, Jr., Department of Mathematics, University of California, Riverside, California 92502

GENERAL ALGEBRA (16 17 18 08)
Donald Passman, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

GROUP THEORY (20)
Bhama Srinivasan, Department of Mathematics, University of Illinois, Chicago, Illinois 60680

ALGEBRAIC AND DIFFERENTIAL TOPOLOGY (55 57 58)
Haynes R. Miller, Room 2-237, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139

REAL VARIABLES (26 28 40)
R. Daniel Mauldin, Department of Mathematics, North Texas State University, Denton, Texas 76203

COMPLEX VARIABLES (30 31 32)
Irwin Kra, Department of Mathematics, State University of New York at Stony Brook, Stony Brook, New York 11794

NUMBER THEORY (11)
Larry J. Goldstein, 12520 Prosperity Drive, Suite 340, Silver Spring, Maryland 20904

ORDINARY DIFFERENTIAL EQUATIONS AND DYNAMICAL SYSTEMS (33 34 39 49 58)
Kenneth R. Meyer, 1314 Ault View Avenue, Cincinnati, Ohio 45208

PARTIAL DIFFERENTIAL EQUATIONS (35 49)
Walter Littman, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

GENERAL ANALYSIS (41 42 43 44 45)
Richard R. Goldberg, Department of Mathematics, Vanderbilt University, Nashville, Tennessee 37235

FUNCTIONAL ANALYSIS AND OPERATOR THEORY (46 47)
John B. Conway, Department of Mathematics, Indiana University, Bloomington, Indiana 47405

FUNCTIONAL ANALYSIS AND CONVEXITY (46 52)
William J. Davis, Department of Mathematics, Ohio State University, Columbus, Ohio 43210

COMPLEX VARIABLES, FUNCTIONAL ANALYSIS AND OPERATOR THEORY (30 46 47)
Paul S. Muhly, Department of Mathematics, University of Iowa, Iowa City, Iowa 52242

LIE GROUPS AND GEOMETRY (22 51 53)
David G. Ebin, Department of Mathematics, State University of New York at Stony Brook, Stony Brook, New York 11794-3651

GENERAL TOPOLOGY (54)
Dennis Burke, Department of Mathematics, Miami University of Ohio, Oxford, Ohio 45056
Doug W. Curtis, Department of Mathematics, Louisiana State University, Baton Rouge, Louisiana 70803

PROBABILITY AND CERTAIN OTHER FIELDS (60–94 inclusive)
William D. Sudderth, Department of Statistics, University of Minnesota, Minneapolis, Minnesota 55455
Daniel W. Stroock, Department of Mathematics, Room 2-272, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139

All other communications should be addressed to the Managing Editor, Paul S. Muhly, at the above address.
G. TOPOLOGY

On the cardinality of a compact $T_1$ space. By ANGELO BELLA ........................................ 176
A note on the existence of $G$-maps between spheres. By STEFAN WANER ...................... 179
Harmonic maps and a pinching theorem for positively curved hypersurfaces. By H. S. Hu,
Y. L. PAN and Y. B. SHEN ...................................................... 182
Invariants for families of Brieskorn varieties. By TERRY LAWSON ............................ 187
The Stone-Čech compactification, the Stone-Čech remainder, and the regular Wallman
property. By TAKASHI KIMURA ..................................................... 193

SHORTER NOTES

An estimate for the variance of a bounded measurable random variable. By M. M.
CHAWLA and S. GOPALSAMY .................................................... 199
Finite generation of certain subrings. By JOHN FOGARTY ............................................... 201
CONTENTS

Vol. 99, No. 1 January 1987 Whole No. 331

A. ALGEBRA AND NUMBER THEORY

Densities for ranks of certain parts of \( p \)-class groups. By FRANK GERTH III ........................................... 1
A note on the unit group of \( Z_3 \). By P. J. ALLEN and C. HOBBY ..................................................... 9
A short proof of Cauchy’s polygonal number theorem. By MELVYN B. NATHANSON . . . . . . . . . . . . . . . . . . . . . . . 22
On a theorem of Huneke concerning multiplicities. By LIAM O’CARROLL ............................................. 25
An upper bound for the permanent of a 3-dimensional \((0, 1)\)-matrix. By STEPHEN J. DOW and PETER M. GIBSON ................................................................. 29
The Jantzen filtration of a certain class of Verma modules. By JONG-MIN KU ........................................... 35
The norm exponent in Galois extensions of number fields. By HANS OPOLEK ............................................. 41

B. ANALYSIS

On analytic slit mappings in the class \( \Sigma \). By YUSUF ABU-MUHANNA and Y. J. LEUNG 44
Automatic continuity and openness of convex relations. By J. M. BORWEIN ........................................... 49
Convolution estimates for some measures on curves. By DANIEL M. OBERLIN ........................................ 56
A unified approach to uniqueness of Walsh series and Haar series. By WILLIAM R. WADE ............................................. 61
Best \( L_1 \)-approximation with varying weights. By ANDRÁS KROÓ .................................................................. 66
A remark on singular Calderón-Zygmund theory. By MICHAEL CHRIST and ELIAS M. STEIN ............................................. 71
The fixed points of an analytic self-mapping. By S. D. FISHER and JOHN FRANKS ............................................. 76
Guiding functions and periodic solutions to functional differential equations. By ALESSANDRO FONDA ............................................. 79
On the essential numerical range of a generalized derivation. By BOJAN MAGAJNA ............................................. 86
Perturbations near zero of the leading coefficient of solutions to a nonlinear differential equation. By VADIM KOMKOV ............................................. 93
Powers of generators of holomorphic semigroups. By RALPH DELAUBENFELS ............................................. 105
On periodic solutions of nonlinear differential equations with singularities. By A. C. LAZER and S. SOLIMINI ............................................. 109
A mean ergodic theorem in Banach spaces. By TAKESHI YOSHIKOTO ............................................. 115
The analytic Radon-Nikodym property in Lebesgue Bochner function spaces. By PATRICK N. DOWLING ............................................. 119
On differentiability of metric projections in \( \mathbb{R}^n \), I: Boundary case. By ALEXANDER SHAPIRO ............................................. 123
On unilateral and bilateral \( n \)th Peano derivatives. By M. LACZKOVICH, D. PREISS and C. WEIL ............................................. 129
Asymptotic behavior of the solutions of the second order difference equation. By ANDRZEJ DROZDOWICZ and JERZY POPENDA ............................................. 135
Limiting structures for sequences of linear fractional transformations. By LISA JACOBSEN and W. J. THRON ............................................. 141

D. GEOMETRY

Pseudo-Riemannian metric singularities and the extendability of parallel transport. By MAREK KOSSOWSKI ............................................. 147

E. LOGIC AND FOUNDATIONS

Exponentiation of reals: Effects of base choice. By R. GUREVIĆ ............................................. 155
Orbits of creative subspaces. By R. G. DOWNEY ............................................. 163
Elementarily equivalent fields with inequivalent perfect closures. By CARLOS R. VIDELA ............................................. 171
