Proceedings of the American Mathematical Society
This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy
To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 15 typed pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 99-101 (1987) are $391.00 list; $313.00 institutional member; $235.00 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25.00; subscribers in India must pay a postage surcharge of $38.00. Combination paper and microfiche subscription prices are $520.00 list; $416.00 institutional member. Microfiche of each issue will be mailed the fastest way possible before the camera copy is sent to the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–89, $110.00 list, $88.00 institutional; for Volumes 90–92, $125.00 list; $100.00 institutional member; for Volumes 93–95, $168.00 list; $134.00 institutional member; for Volumes 96–98, $185.00 list; $148.00 institutional members.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901-9930. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

PROCEEDINGS of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940

The paper used in this journal is acid-free and falls within the guidelines established to ensure permanence and durability.
AUTHOR INDEX
1987
Volumes 99–101

Throughout this Index, bold numerals are used to denote the volume number; lightface numerals denote the pages.

*Starred items are “Shorter Notes”.

Abram, Thomas J. and Weiss, Max L. Some characterizations of trivial parts for $H^{\infty}(D)$, 99, 455.

Abu-Muhanna, Yusuf and Leung, Y. J. On analytic slit mappings in the class $\Sigma$, 99, 44.

Adachi, Toshiaki. Closed orbits of an Anosov flow and the fundamental group, 100, 595.

Adams, Colin C. The noncompact hyperbolic 3-manifold of minimal volume, 100, 601.

Allaway, William R. Orthogonality preserving maps and the Laguerre functional, 100, 82.

Allen, P. J. and Hobby, C. A note on the unit group of $ZS_3$, 99, 9.

Anderson, Michael T. Metrics of negative curvature on vector bundles, 99, 357.

Andréka, H. Boolean reducts of relation and cylindric algebras and the cube problem, 100, 148.

Ansari, Mohamad A. Perturbations of the unilateral shift and transitive operator algebras, 101, 455.

Ariño, Miguel A. Convexity and Banach envelope of the weak-$L_p$ spaces, 100, 661.

Arteaga, Carlos. The complement of the stable manifold for one dimensional endomorphisms, 100, 367.

Ash, J. M. and Jones, R. L. Mean value theorems for generalized Riemann derivatives, 101, 263.

*Ashbaugh, Mark S. and Benguria, Rafael. Best constant for the ratio of the first two eigenvalues of one-dimensional Schrödinger operators with positive potentials, 99, 598.

Avrin, Joel D. The generalized Burgers' equation and the Navier-Stokes equation in $R^n$ with singular initial data, 101, 29.

Bachelis, Gregory F. and Saeki, Sadahiro. Banach algebras with uncomplemented radical, 100, 271.

Bahri, Anthony and Gilkey, Peter. Pin$^c$ cobordism and equivariant Spin$^c$ cobordism of cyclic 2-groups, 99, 380.

Balcar, B. and Franek, F. Completion of factor algebras of ideals, 100, 205.

Balogh, Zoltan and Bennett, Harold. Total paracompactness of real GO-spaces, 101, 753.

Bandle, Catherine and Philippin, Gérard. An inequality for eigenvalues of Sturm-Liouville problems, 100, 34.

Barge, Marcy. Homoclinic intersections and indecomposability, 101, 541.

Barnes, Donald W. The simplicial bundle of a CW fibration, 101, 559.

Bayod, José M. and Martínez-Maurica, J. Ultrametrically injective spaces, 101, 571.

Bella, Angelo. On the cardinality of a compact $T_1$ space, 99, 176.
Bellenot, Steven F. More quasi-reflexive subspaces, 101, 693.
Benguria, Rafael. See Ashbaugh, Mark S.
Bennett, Grahame. An inequality suggested by Littlewood, 100, 474.
Bennett, Harold. See Balogh, Zoltan
Berner, Andrew J. and Juhasz, Istvan. The $\text{SUP}=\text{MAX}$ problem for $\delta$, 99, 585.
Bernstein, Herbert J. An inequality for selfadjoint operators on a Hilbert space, 100, 319.
———. Corrigenda to “An inequality for selfadjoint operators on a Hilbert space”, 101, 394.
Bestvina, M. and Cooper, D. A wild Cantor set as the limit set of a conformal group action on $S^3$, 99, 623.
Binder, Jiff and Navara, Mirko. Quantum logics with lattice state spaces, 100, 688.
Birkenmeier, Gary F. Quotient rings of rings generated by faithful cyclic modules, 100, 8.
Bisson, Terrence Paul. Cohomology morphisms from $H^*(BU; Z/p)$ to $H^*(BZ/p; Z/p)$, 101, 363.
Blasco, Oscar. Positive $p$-summing operators on $L_p$-spaces, 100, 275.
Blei, Ron C. An elementary proof of the Grothendieck inequality, 100, 58.
Bonet, Jose. On the identity $L(E, F) = LB(E, F)$ for pairs of locally convex spaces $E$ and $F$, 99, 249.
Borwein, J. M. Automatic continuity and openness of convex relations, 99, 49.
Bosch, Carlos and Kucera, Jan. A necessary and sufficient condition for $w^*$-bounded sets to be strongly bounded, 101, 453.
Bourdon, Paul S. Similarity of parts to the whole for certain multiplication operators, 99, 563.
Brewster, Ben and Sehgal, Surinder. The Frattini argument and $t$-groups, 101, 239.
Brooks, Robert and Waksman, Peter. The first eigenvalue of a scalene triangle, 100, 175.
Brown, Johnny E. Level sets for functions convex in one direction, 100, 442.
Buczkovich, Z. For every continuous $f$ there is an absolutely continuous $g$ such that $[f = g]$ is not bilaterally strongly porous, 100, 485.
Buntinas, Martin. Some new multipliers of Fourier series, 101, 497.
Buss, Samuel R. A conservation result concerning bounded theories and the collection axiom, 100, 709.
Butler, Lynne M. A unimodality result in the enumeration of subgroups of a finite abelian group, 101, 771.
*Casadio Tarabusi, Enrico. An elementary proof of Sodkowskii’s theorem, 99, 783.
Cass, Daniel. Integer parts of powers of quadratic units, 101, 610.
Chang, K. S., Johnson, G. W. and Skoug, D. L. Functions in the Fresnel class, 100, 309.

Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 15 (8½ x 11) pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt. To encourage the submission of manuscripts in electronic form using \TeX{} and the \texttt{AMS-\TeX{}} macro package, the Executive Committee of the Council has adopted a policy that allows for accelerating the publication date of such manuscripts by as much as 20 weeks, which is approximately equal to the time normally needed by the Society for copyediting, typesetting, and proofreading an average manuscript.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification (1985 Revision) representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual subject index of Mathematical Reviews, published with the December issue starting in 1984.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

OFFPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding offprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $50 per page to help defray the cost of publication. The amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of his paper for publication dependent upon payment of the page charge.

BACKLOG. 150 pages. Papers currently being accepted by the editors will be published in 9–11 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classification from the 1980 Mathematics Subject Classification (1985 Revision) and describe the fields being handled by the editor.

### CONTENTS

**Vol. 101, No. 4**  
**December 1987**  
**Whole No. 342**

#### A. ALGEBRA AND NUMBER THEORY

- Some problems on splittings of groups. II. **SÁNDOR SZABÓ** .......................... 585
- A compact semilattice on the Hilbert cube with no interval homomorphisms. **GERHARD GIERZ** .......................... 592
- Characters of p-groups. **CHARLES E. FORD** .................................. 595
- On a zeta function associated to ternary zero forms. **BARRY A. CIPRA** .......... 602
- Unimodular commutators. **MORRIS NEWMAN** .................................. 605
- Integer parts of powers of quadratic units. **DANIEL CASS** ...................... 610
- On left absolutely flat bands. **S. BULMAN-FLEMING and K. MCDOWELL** .......... 613
- Groups of units of modular group algebras. **CESLAW BAGINSKI** ................. 619
- On primes p with \(\sigma(p^n) = m^2\). **J. CHIDAMBARASWAMY and P. V. KRISHNAIAH** .......................... 625

#### B. ANALYSIS

- \(k\)-to-1 functions on an arc. **HIDEFUMI KATSUURA and KENNETH R. KELLUM** .......... 629
- Exact sequences for generalized Toeplitz operators. **CARL SUNDBERG** .......... 634
- Almost everywhere divergence of multiple Walsh-Fourier series. **DAVID C. HARRIS** .......................... 637
- On the structure of sets of uniqueness. **RUSSELL LYONS** .......................... 644
- An indecomposable Daniell integral. **B. R. F. JEFFERIES and D. H. FREMLIN** .......... 647
- On the zeros of polynomials of minimal \(L_p\)-norm. **ANDRAŠ KROÓ and FRANZ PEHERSTORFER** .......................... 652
- Closed subspaces of finite codimension in some function algebras. **RAMESH V. GARIMELLA and N. V. RAO** .......................... 657
- Approximate innerness of positive linear maps of finite von Neumann algebras. II. **CHÔICHIRÔ SUNOUCHI and HIDEO TAKEMOTO** .......................... 662
- Matrix methods and the property of stretchings. **T. A. KEAGY** .......................... 667
- Baire category and \(B_{\omega}\)-spaces. **DOMINIKUS NOLL** .......................... 671
- Generalizations of the Sidon-Telyakovskii theorem. **ČASLAV V. STANOJEVIĆ and VERA B. STANOJEVIĆ** .......................... 679
- A short proof of a theorem on compositions of d.c. mappings. **LIBOR VESELY** .......................... 685
- On the uniqueness of a minimal norm representative of an operator in the commutant of the compressed shift. **CIPRIAN FOIAS and ALLEN TANNENBAUM** .......................... 687
- More quasi-reflexive subspaces. **STEVEN F. BELLENOT** .......................... 693
- Weakly compact bilinear forms and Arens regularity. **Å. ÜLGER** .......................... 697

#### F. STATISTICS AND PROBABILITY

- A sharp estimate for dyadic martingales with multiple indices. **GREGORY J. MORROW** .......................... 705
- Strong limit theorems for blockwise \(m\)-dependent and blockwise quasiorthogonal sequences of random variables. **F. MÓRICZ** .......................... 709

#### G. TOPOLOGY

- Zero span is a sequential strong Whitney-reversible property. **AKIRA KOYAMA** .......... 716
- A finiteness problem for one dimensional maps. **W. DE MELO** .......................... 721
- A generalization of Smith theory. **J. P. MAY** .......................... 728
- The equivariant structure of Eilenberg-Mac Lane spaces. I. The \(Z\)-torsion free case. **JUSTIN R. SMITH** .......................... 731
- Combinatorial properties for Blackwell sets. **R. M. SHORTT** .......................... 738
- Finite covers of 3-manifolds containing essential surfaces of Euler characteristic = 0. **SADAYOSHI KOJIMA** .......................... 743
- On Legendrian singularities. **SHYÜICHI IZUMIYA** .......................... 748
- Total paracompactness of real GO-spaces. **ZOLTAN BALOGH and HAROLD BENNETT** .......................... 753

(Continued on inside back cover)
