Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 16 (8½" × 11") typewritten, double-spaced pages. If TeX or a similar system is used, submitted manuscripts should not exceed 10 AMS-TEX preprint style or AMS-IMACS article style pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author’s name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 111–113 (1991) are $470 list; $376 institutional member; $282 individual member. A late charge of 10% of the subscription price will be imposed upon orders received after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25: subscribers in India must pay a postage surcharge of $38. Expedited delivery to destinations in North America—$33; elsewhere—$90. Combination paper and microfiche subscription prices are $625 list; $501 institutional member. Microfiche of each issue will be mailed the fastest way possible before the camera copy is sent to the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–89, $124 list, $99 institutional; for Volumes 90–92, $142 list; $114 institutional member; for Volumes 93–95, $190 list; $152 institutional member; for Volumes 96–98, $210 list; $168 institutional members; for Volumes 99–104, $222 list; $178 institutional member; for Volumes 105–107, $227 list; $182 institutional member; for Volumes 108–110, $216 list; $173 institutional member.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901-1571. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940-6248.

PROCEEDINGS of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940-6248.

Information on Copying and Reprinting can be found at the back of this journal. The paper used in this journal is acid-free and falls within the guidelines established to ensure permanence and durability. This publication was typeset using AMS-TEX, the American Mathematical Society's TeX macro system.
Manuscript Information

1. Articles submitted for publication should be no more than 16 (8½" × 11") typewritten, double-spaced pages. If \TeX{} or a similar system is used, submitted manuscripts should not exceed 10 \textsc{ams-\LaTeX} preprint style or \textsc{ams-\LaTeX} article style pages. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt. To encourage the submission of manuscripts in electronic form using \TeX{} and the \textsc{ams-\LaTeX} macro package, the Executive Committee of the Council has adopted a policy that allows for accelerating the publication date of such manuscripts by as much as 20 weeks, which is approximately equal to the time normally needed by the Society for copyediting, typesetting, and proofreading an average manuscript.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual subject index of Mathematical Reviews, published with the December issue starting in 1990.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

OFFPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding offprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

BACKLOG. Papers currently being accepted by the editors will be published in 12–14 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 27 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classification from the 1991 Mathematics Subject Classification and describe the fields being handled by the editor.

**LOGIC AND FOUNDATIONS (03 04)**
Andreas R. Blass, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48109-1003

F. STATISTICS AND PROBABILITY
Level crossings of a random trigonometric polynomial. By Kambiz Farahmand .... 551

G. TOPOLOGY
A generalized van Kampen–Flores theorem. By K. S. Sarkaria ......................... 559
Combinatorial set theory and cardinal function inequalities. By R. E. Hodel ........ 567
On the action of Steenrod squares on polynomial algebras. By William M. Singer .... 577
Asymptotic behavior of stable manifolds. By Michal Fečkan ......................... 585
## CONTENTS

**Vol. 111, No. 2**  
February 1991  
Whole No. 380

### A. ALGEBRA AND NUMBER THEORY

- The free lattice-ordered group over a nilpotent group.  
  By Michael R. Darnel  
  301
- Irreducible outer automorphisms of a free group.  
  By S. M. Gersten and J. R. Stallings  
  309
- Free subalgebras of enveloping fields.  
  By L. Makar-Limanov and P. Malcolmson  
  315

### B. ANALYSIS

- On dual sets generated by lacunary polynomials.  
  By Hans Dobbertin and Volker Kasten  
  323
- Twistor spaces with meromorphic functions.  
  By Y. S. Poon  
  331
  By Peter Shi  
  339
- Holomorphic motions and polynomial hulls.  
  By Zbigniew Slodkowski  
  347
- Determinant of the Neumann operator on smooth Jordan curves.  
  By Julian Edward and Siye Wu  
  357
- A criterion for the nonporosity of a general cantor set.  
  By Paul D. Humke  
  365
- Absolute continuity of Hamiltonians with von Neumann Wigner potentials.  
  By Horst Behncke  
  373
- Forced oscillations with rapidly vanishing nonlinearities.  
  By R. Kannan and Kent Nagle  
  385
- Comparison theorems for the $\nu$-zeroes of Legendre functions $P_\nu^m(z_0)$ when $-1 < z_0 < 1$.  
  By Frank E. Baginski  
  395
- Criteria for the extremality of the Koebe mapping.  
  By D. Bshouty and W. Hengartner  
  403
- Singularly continuous measures in Nevai's class $\mathcal{M}$.  
  By D. S. Lubinsky  
  413
- Invariant signed measures and the cancellation law.  
  By M. Laczkovich  
  421
- On the oscillation of differential equations with periodic coefficients.  
  By Ch. G. Philos  
  433
- Some estimates for harmonic measures. II.  
  By James A. Jenkins  
  441
- Differentiable functions which do not satisfy a uniform Lipschitz condition of any order.  
  By Masayoshi Hata  
  443
- The gap between the first two eigenvalues of a one-dimensional Schrödinger operator with symmetric potential.  
  By S. Abramovich  
  451
- Noninvertible transformations admitting no absolutely continuous $\sigma$-finite invariant measure.  
  By Jane M. Hawkins and Cesare E. Silva  
  455
- Radon-Nikodym theorems for multimeasures and transition multimeasures.  
  By Nikolaos S. Papageorgiou  
  465
- Maximal triangular subalgebras need not be closed.  
  By Yiu Tung Poon  
  475
- On the weighted approximation of continuously differentiable functions.  
  By Leopoldo Nachbin  
  481
- Blow-up of $H^1$ solutions for the one-dimensional nonlinear Schrödinger equation with critical power nonlinearity.  
  By Takayoshi Ogawa and Yoshio Tsutsumi  
  487
- Zeros of solutions of a second order nonlinear differential inequality.  
  By Fu-Hsiang Wong  
  497
- Centralizing mappings on von Neumann algebras.  
  By Matej Brešar  
  501
- Two operator functions with monotone property.  
  By Takayuki Furuta  
  511
- Systems of equations in the predual of a von Neumann algebra.  
  By Michael Marsalli  
  517

### C. APPLIED MATHEMATICS

- Exponential sums and Goppa codes: I.  
  By Carlos J. Moreno and Oscar Moreno  
  523

### E. LOGIC AND FOUNDATIONS

- Paradoxical decompositions and invariant measures.  
  By Piotr Zakrzewski  
  533
- Sharply transitive linear groups over algebraically closed fields.  
  By Gregory Cherlin, Theo Grundhöfer, Ali Nesin, and Helmut Völklein  
  541
