Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 16 (8 ½" × 11") typewritten, double-spaced pages. If $\TeX$ or a similar system is used, submitted manuscripts should not exceed 10 $\LaTeX$ preprint style or $\LaTeX$ article style pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading Shorter notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter notes department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

Subscription Information. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 111-113 (1991) are $470 list; $376 institutional member; $282 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25: subscribers in India must pay a postage surcharge of $38. Expedited delivery to destinations in North America—$33; elsewhere—$90. Combination paper and microfiche subscription prices are $625 list; $501 institutional member. Microfiche of each issue will be mailed the fastest way possible before the camera copy is sent to the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

BACK NUMBER INFORMATION. BACK NUMBER prices per volume are for Volumes 1-89, $124 list; $99 institutional; for Volumes 90-92, $142 list; $114 institutional member; for Volumes 93-95, $190 list; $152 institutional member; for Volumes 96-98, $210 list; $168 institutional members; for Volumes 99-104, $222 list; $178 institutional member; for Volumes 105-107, $227 list; $182 institutional member; for Volumes 108-110, $216 list; $173 institutional member.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901-1571. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940-6248.

PROCEEDINGS of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940-6248.

A. ALGEBRA AND NUMBER THEORY

Spectral multiplicity on products of hyperbolic spaces. By JONATHAN HUNTLEY .......... 1
Bond invariance of $G$-rings and localization. By ROBERT B. WARFIELD, JR. .......... 13
Matrices with circular symmetry on their unitary orbits and $C$-numerical ranges.
By CHI-KWONG LI and NAM-KIU TSING ................................................. 19
A note on linear automorphisms over $\mathbb{R}$. By MOUFAQ HAJJA ..................... 29
A note on the Jacobian condition and two points at infinity. By JAMES H. MCKAY AND
STUART SUI-SHENG WANG ................................................................. 35

B. ANALYSIS

Matrix maps and the isomorphic structure of BK spaces. By JEFF CONNOR .............. 45
On the clustering conjecture for Bernoulli factors of Bernoulli shifts. By G. KELLER .... 51
Ultraseparating function spaces and operating functions for the real part of a function alge-
bra. By EGGERT BREIM ........................................................................ 55
A characterization of the approximation order of translation invariant spaces of functions.
By RONG-QING JIA .................................................................................. 61
How to compute the square root of the non-Euclidean wave operator. By M. KOVALYOV
and M. LÉGARE ................................................................. 71
Separate convergence of general T-fractions. By W. J. THRON ............................... 75
Lower 2-estimates for sequences in Banach lattices. By FRANK RÄBIGER ............... 81
Characterization of functions in terms of rate of convergence of a quadrature process.
By Q. I. RAHMAN and G. SCHMEISSELER .................................................. 85
The de Branges–Rovnyak model. By JAMES GUYKER ........................................... 95
Second-derivative estimates for solutions of two-dimensional Monge–Ampère equations.
By FRIEDMAR SCHULZ ............................................................................. 101
Index of faithful normal conditional expectations. By SZE-KAI TSUI ...................... 111
Construction of characteristic functions for classes of infinitely differentiable functions.
By M. ALLOUCHE, R. COUTURE, and C. T. TSAI ........................................... 119
Henstock integrable functions are Lebesgue integrable on a portion.
By ZOLTÁN BUCZOLICH ............................................................................. 127
Totally real sets in $C^2$. By H. ALEXANDER .................................................. 131
An inequality with applications to the subellipticity of the $\overline{\partial}$-Neumann problem.
By LOP-HING HO ..................................................................................... 135
Sets of minimal points in $l_p$. By MIGUEL LACRUZ ......................................... 139
Rotundity, the C.S.R.P., and the $\lambda$-property in Banach spaces. By RICHARD M. ARON,
ROBERT H. LOHMAN, and ANTONIO SÁNCHEZ ........................................ 151
The envelope of holomorphy of a truncated tube. By ZAIFEI YE ............................. 157
A comparison theorem for selfadjoint operators. By AMIN BOUMENIR ................... 161
Weak amenability of group algebras of connected complex semisimple Lie groups.
By B. E. JOHNSON ..................................................................................... 177
A further generalization of the Knaster–Kuratowski–Mazurkiewicz theorem.
By NAOKI SHIOJI ..................................................................................... 187
Multiplicative decomposition of probability measures. By HARALD LUCHSCHY .... 197
The range of a vector measure determines its total variation.
By LUIS RODRÍGUEZ-PABELLA ................................................................. 205
A uniqueness theorem for $y' = f(x, y)$, $y(x_0) = y_0$. By ARMANDO MAJORANA .......... 215
Convexity properties of distinguished eigenvalues of certain classes of operators.  
By B. NAJMAN .................................................. 221
A precomposition analysis of linear operators on $\ell^p$.  By STEVE M. HUDSON ............... 227

E.  LOGIC AND FOUNDATIONS

Sierpinski sets and strong first category.  By JAKUB JASINSKI and TOMASZ WEISS ............. 235

F.  STATISTICS AND PROBABILITY

Sufficiency and the separation of strongly convex sets of probability measures.  
By R. V. RAMAMOORTHI .................................. 239

G.  TOPOLOGY

The span and semispan of some simple closed curves.  By KATARZYNA TKACZYŃSKA ............. 247
Weakly infinite-dimensional product spaces.  By DALE M. ROHM ................................ 255
The relationships of spans of convex continua in $\mathbb{R}^n$.  By THELMA WEST .............. 261
Surjective mappings whose differential is nowhere surjective.  By Y. YOMDIN ................. 267
Characteristics of index one orbits of Morse–Smale diffeomorphisms.  
By RICHARD A. HOLMGREN ................................. 271
Classifying immersed curves.  By J. SCOTT CARTER .................................. 281

H.  COMBINATORICS

Enumeration of Hamiltonian cycles and paths in a graph.  By C. J. LIU ................. 289

SHORTER NOTES

Simply connected manifolds with no conjugate points which are flat outside a compact set.  
By CHRISTOPHER B. CROKE ................................ 297
Corrigendum to the singular integral characterization of $H^p$ on simple martingales.  
By AKIHITO UCHIYAMA .................................. 299

Vol. 111, No. 2  
February 1991  
Whole No. 380

A.  ALGEBRA AND NUMBER THEORY

The free lattice-ordered group over a nilpotent group.  By MICHAEL R. DARNEL .......... 301
Irreducible outer automorphisms of a free group.  By S. M. GERSTEN and J. R. STALLINGS 309
Free subalgebras of enveloping fields.  By L. MAKAR-LIMANOV and P. MALCOLMSON ...... 315

B.  ANALYSIS

On dual sets generated by lacunary polynomials.  By HANS DOBBERTIN and VOLKER KASTEN 323
Twistor spaces with meromorphic functions.  By Y. S. POON .............................. 331
Equivalence of variational inequalities with Wiener–Hopf equations.  By PETER SHI ....... 339
Holomorphic motions and polynomial hulls.  By ZBIGNIEW SLODKOWSKI ...................... 347
Determinant of the Neumann operator on smooth Jordan curves.  By JULIAN EDWARD and 
SYYE WU .................................................. 357
A criterion for the nonporosity of a general cantor set.  By PAUL D. HUMKE .......... 365
Absolute continuity of Hamiltonians with von Neumann Wigner potentials.  
By HORST BEHNCKE .................................... 373
Forced oscillations with rapidly vanishing nonlinearities.  By R. KANNAN and KENT NAGLE 385
Comparison theorems for the $\nu$-zeroes of Legendre functions $P_{\nu}^m(z_0)$ when $-1 < z_0 < 1$.
By Frank E. Baginski ............................................. 395
Criteria for the extremality of the Koebe mapping. By D. Bshouty and W. Hengartner 403
Singularly continuous measures in Nevaï’s class $M$. By D. S. Lubinsky ......................... 413
Invariant signed measures and the cancellation law. By M. Laczkovich .............................. 421
On the oscillation of differential equations with periodic coefficients. By Ch. G. Philos . 433
Some estimates for harmonic measures. II. By James A. Jenkins ................................. 441
Differentiable functions which do not satisfy a uniform Lipschitz condition of any order.
By Masayoshi Hata .................................................. 443
The gap between the first two eigenvalues of a one-dimensional Schrödinger operator with symmetric potential. By S. Abramovich ........................................... 451
Noninvertible transformations admitting no absolutely continuous $\sigma$-finite invariant measure.
By Jane M. Hawkins and Cesar E. Silva .............................................. 455
Radon-Nikodym theorems for multimeasures and transition multimeasures.
By Nikolaos S. Papageorgiou .......................................... 465
Maximal triangular subalgebras need not be closed. By Yiu Tung Poon ............................ 475
On the weighted approximation of continuously differentiable functions.
By Leopoldo Nachbin ................................................ 481
Blow-up of $H^1$ solutions for the one-dimensional nonlinear Schrödinger equation with critical power nonlinearity. By Takayoshi Ogawa and Yoshio Tsutsumi ....................... 487
Zeros of solutions of a second order nonlinear differential inequality.
By Fu-Hsiang Wong .................................................. 497
Centralizing mappings on von Neumann algebras. By Matej Brešar ..................................... 501
Two operator functions with monotone property. By Takayuki Furuta ............................... 511
Systems of equations in the predual of a von Neumann algebra. By Michael Marsalli 517

C. APPLIED MATHEMATICS

Exponential sums and Goppa codes: I. By Carlos J. Moreno and Oscar Moreno ... 523

E. LOGIC AND FOUNDATIONS

Paradoxical decompositions and invariant measures. By Piotr Zakrzewski ...................... 533
Sharply transitive linear groups over algebraically closed fields. By Gregory Cherlin,
Theo Grundhöfer, Ali Nesin, and Helmut Völklein ........................................... 541

F. STATISTICS AND PROBABILITY

Level crossings of a random trigonometric polynomial. By Kambiz Farahmand ............. 551

G. TOPOLOGY

A generalized van Kampen–Flores theorem. By K. S. Sarkaria ............................... 559
Combinatorial set theory and cardinal function inequalities. By R. E. Hodel .......... 567
On the action of Steenrod squares on polynomial algebras. By William M. Singer ...... 577
Asymptotic behavior of stable manifolds. By Michal Fečkan .............................. 585

Vol. 111, No. 3 March 1991 Whole No. 381

A. ALGEBRA AND NUMBER THEORY

Norm exponents and representation groups. By Hans Opolka .............................. 595
Singular degenerations of Calabi–Yau manifolds and the Weil-Petersson metric.
By Paul S. Green .................................................. 599
On Yamamoto's reciprocity law. By Kenneth S. Williams ............................................. 607

Unit groups of completed modular group algebras and the isomorphism problem.
By Frank Röhl .......................................................... 611

A partition result for algebraic varieties. By Aner Shalev .......................................... 619

A generic Torelli-type theorem for singular algebraic curves with an involution.
By Miroslav Tsanov Jotov ........................................... 625

On products of characters in $A_n$. By Ilan Zisser .................................................. 633

A result by Kulikov that does not extend to modules over general valuation domains.
By L. Salce and P. Zanardo ........................................... 643

Functorial finite subcategories over triangular matrix rings. By S. O. Smalø .................. 651

B. ANALYSIS

On $p - C^*$ summing operators. By Krzysztof Nowak .................................................. 657

On the extensions of vector-valued Loeb measures.
By Horst Osswald and Yeneng Sun ........................................ 663

Periodically perturbed nonconservative systems of Liénard type. By M. N. Nkashama .... 677

Basis of wavelets and atomic decompositions of $H^1(R^n)$ and $H^1(R^n \times R^n)$.
By J. Aguirre, M. Escobedo, J. C. Peral, and Ph. Tchamitchian ............................... 683

A sampling theorem for a class of pseudoanalytic functions.
By J. L. Schiff and W. J. Walker ........................................ 695

Convergence of arguments of Blaschke products in $L_p$-metrics. By A. V. Rybkin ........ 701

The first sign change of a cosine polynomial. By Jiang Zeng ................................. 709

Global hypoellipticity of a Mathieu operator. By Masafumi Yoshino .......................... 717

On a singular nonlinear elliptic boundary-value problem.
By A. C. Lazer and P. J. McKenna .................................. 721

Positiveness of nonnegative supersolutions of elliptic equations.
By Liang Xiting and Yu Mingqi ........................................ 731

Algebras of invariant functions on the Šilov boundary of generalized half-planes.
By Giovanna Carcano .................................................. 743

Convolution equations in certain Banach spaces. By Alexander L. Koldobskii ............... 755

Compactness in $L_1$, Dunford-Pettis operators, geometry of Banach spaces.
By Maria Girardi ....................................................... 767

Regularity of the $\overline{\partial}$-Neumann problem. By So-Chin Chen .......................... 779

On the cohomological equivalence of a class of functions under an irrational rotation of
bounded type. By Lawrence Baggett and Kathy Merrill ........................................ 787

Remarks on blow up for a nonlinear parabolic equation with a gradient term.
By Marek Fila .......................................................... 795

Cusp forms associated to rank 2 parabolic subgroups of Kleinian groups.
By Irwin Kra ......................................................... 803

D. GEOMETRY

A sphere theorem for reverse volume pinching on even-dimensional manifolds.
By Leslie Coghlan and Yoe Itokawa ....................................... 815

E. LOGIC AND FOUNDATIONS

$Q$-sets, Sierpinski sets, and rapid filters. By Haim Judah and Saharon Shelah ............. 821

Varieties with cofinal sets: examples and amalgamation.
By Peter Bruyns and Henry Rose ........................................ 833

Partitioning pairs of countable sets. By Stevo Todorcevic .................................... 841

Measures on Boolean algebras. By Wiesław Główczyński ....................................... 845
F. STATISTICS AND PROBABILITY

Mean number of real zeros of a random trigonometric polynomial.
By J. Ernest Wilkins, Jr. .................................................. 851

G. TOPOLOGY

CE-equivalence, $UV^k$-equivalence and dimension of compacta. By Peter Mrozik .... 865
Free loop spaces of finite complexes have infinite category.
By Y. Félix, J. C. Thomas, and M. Vigué-Poirrier ................. 869
Existence d’applications harmoniques tordues à valeurs dans les variétés à courbure négative.
By François Labourie .................................................... 877
A note on cobordism of surface links in $S^4$. By Masahico Saito .......... 883

Vol. 111, No. 4 April 1991 Whole No. 382

A. ALGEBRA AND NUMBER THEORY

Partitions, Egyptian fractions, and free products of finite abelian groups.
By Michael Anshel and Dorian Goldfeld .................................. 889
A functional central limit theorem in Diophantine approximation. By Jorge D. Samur 901
Power roots of linearized polynomials. By Han Wen Bao ................. 913
Lower bounds for the solutions in the second case of Fermat’s Last Theorem.
By Le Maohua ............................................................... 921
Norm of Schur multiplication for Schatten norm. By K. Okubo ............ 925

B. ANALYSIS

Holomorphic functions operating in Hermitian Banach algebras. By A. Elkinani ...... 931
Convergence of difference approximations and nonlinear semigroups. By Shigeo Kanda 941
On the convergence in $S'$. By Stevan Pilipović ........................ 949
Comments on an $L^2$ inequality of A. K. Varma involving the first derivative of polynomials.
By Li-Chien Shen ......................................................... 955
Completely bounded maps between the preduals of von Neumann algebras.
By Hiroyuki Osaka ........................................................ 961
Absolute boundedness and absolute convergence in sequence spaces.
By Martin Buntinas and Naza Tanović-Miller ........................ 967
Functions of the first Baire class with values in Banach spaces. By Charles Stegall 981
An approximation property related to $M$-ideals of compact operators.
By Rafael Payá and Wend Werner ......................................... 993
Integral operators on spaces of continuous vector-valued functions. By Paulette Saab . 1003
Endpoint estimates for the maximal operator associated to spherical partial sums on radial
functions. By Elena Romera and Fernando Soria .......................... 1015
Some examples of Tauberian operators. By Teresa Alvarez and Manuel Gonzalez . 1023
On the continuity of the Nemitsky operator induced by a Lipschitz continuous map.
By Roberta Musina .......................................................... 1029
A singular perturbation result and its application to mathematical ecology.
By Lige Li and A. G. Ramm ................................................ 1043
Rearrangements in steady vortex flows with circulation.
By Alan R. Elcrat and Kenneth G. Miller .............................. 1051
Interpolating sequences in a homeomorphic part of $H^{\infty}$. By Keiji Izuchi ....... 1057
An alternating procedure for operators on uniformly convex and uniformly smooth Banach spaces. By Zong-Ben Xu and G. F. Roach ................................................. 1067
Amenability of locally compact groups and subspaces of $L^∞(G)$. By Tianxuan Miao .......................... 1075

E. LOGIC AND FOUNDATIONS

Saturated families. By Martin Goldstern, Haim I. Judah, and Saharon Shelah ...... 1095
ω₁ ω₁ → (ω₁ ω₁, 3)² requires an inaccessible.
By Lee Stanley, Dan Velleman, and Charles Morgan ................................. 1105

G. TOPOLOGY

Characterizations of paracompactness and subparacompactness using star reducibility.
By Howard H. Wicke and John M. Worrell, Jr........................................... 1119
The nonexistence of a continuous surjection from a continuum onto its square.
By Hidefumi Katsuura .................................................. 1129
The set of second iterates is nowhere dense in C. By Károly Simon ..................... 1141
A regular topological space having no closed subsets of cardinality $\mathfrak{c}$. By Martin Goldstern, Haim I. Judah, and Saharon Shelah 1151
The classification of solenoids. By J. M. Aarts and R. J. Fokkink ..................... 1161
A transitive map on [0, 1] whose inverse limit is the pseudoarc.
By Piotr Minc and W.R.R. Transue .............................................. 1165
An embedding space triple of the unit interval into a graph and its bundle structure.
By Katsuro Sakai .......................................................... 1171
A continuum having its hyperspaces not locally contractible at the top.
By Alejandro Illanes ...................................................... 1177
Vanishing of coefficients in overlapping germ expansions for $p$-adic $GL(n)$.
By Fiona Murnaghan and Joe Repka ........................................ 1183
The Gottlieb group of finite linear quotients of odd dimensional spheres.
By S. Allen Broughton ...................................................... 1195
Correction to "Measurable homomorphisms of locally compact groups" 106 (1989), 391–395.
By Adam Kleppner ......................................................... 1199
Manuscript Information

1. Articles submitted for publication should be no more than 16 (8.5" × 11") typewritten, double-spaced pages. If \( \text{T}e\text{X} \) or a similar system is used, submitted manuscripts should not exceed 10 \( \text{AMSTeX} \) preprint style or \( \text{AMSTeX} \) article style pages. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt. To encourage the submission of manuscripts in electronic form using \( \text{T}e\text{X} \) and the \( \text{AMSTeX} \) macro package, the Executive Committee of the Council has adopted a policy that allows for accelerating the publication date of such manuscripts by as much as 20 weeks, which is approximately equal to the time normally needed by the Society for copyediting, typesetting, and proofreading an average manuscript.

2. The first page must consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual subject index of Mathematical Reviews, published with the December issue starting in 1990.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

OFFPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding offprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

BACKLOG. Papers currently being accepted by the editors will be published in 12–14 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 27 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classification from the 1991 Mathematics Subject Classification and describe the fields being handled by the editor.

LOGIC AND FOUNDATIONS (03 04)
Andreas R. Blass, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48109-1003
