Editorial Information

To be published in the *Proceedings*, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. *Proceedings* Editors shall solicit and encourage publication of worthy papers of length not exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for *AMSTeX* or *AMSIATEX*.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

As of January 2, 1992, the backlog for this journal was approximately 16 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office on the above date by the average number of articles per issue over the previous twelve months.

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor (to their best knowledge) is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, there should be the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of *Mathematical Reviews*, published with the December issue starting in 1990, as well as from the electronic service e-MATH [telnet e-MATH.ams.com (or telnet 130.44.1.100)]. Login and password are e-math. For journal abbreviations used in bibliographies, see the list of serials in the latest *Mathematical Reviews* annual index. Authors are encouraged to supply electronic addresses when available. These will be printed after the postal address at the end of each article.

**Electronically-prepared manuscripts.** The AMS encourages submission of electronically-prepared manuscripts in *AMSTeX* or *AMSIATEX* because properly prepared electronic manuscripts save the author proofreading time and move more quickly through the production process. To this end, the Society
has prepared "preprint" style files, specifically the amsppt style of \texttt{AMSTeX} and the amsart style of \texttt{AMSTeX}, which will simplify the work of authors and of the production staff. Those authors who make use of these style files from the beginning of the writing process will further reduce their own effort.

*Guidelines for Preparing Electronic Manuscripts* provide additional assistance and are available for use with either \texttt{AMSTeX} or \texttt{AMSTeX}. Authors with FTP access may obtain these *Guidelines* from the Society’s Internet node e-MATH.ams.com (130.44.1.100). For those without FTP access they can be obtained free of charge from the e-mail address guide-elec@math.ams.com (Internet) or from the Publications Department, P. O. Box 6248, Providence, RI 02940-6248. When requesting *Guidelines* please specify which version you want.

Electronic manuscripts should be sent to the Providence office only after the paper has been accepted for publication. Please send electronically prepared manuscript files via e-mail to pub-submit@math.ams.com (Internet) or on diskettes to the Publications Department address listed above. When submitting electronic manuscripts please be sure to include a message indicating in which publication the paper has been accepted.

Two copies of the paper should be sent directly to the appropriate Editor and the author should keep one copy. At that time authors should indicate if the paper has been prepared using \texttt{AMSTeX} or \texttt{AMSTeX}. The *Manual for Authors of Mathematical Papers* should be consulted for symbols and style conventions. The *Manual* may be obtained free of charge from the e-mail address cust-serv@math.ams.com or from AMS, Customer Services Department, P. O. Box 6248, Providence, RI 02940-6248.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.
Editors

Authors are requested to send papers directly to the appropriate Editor (the one whose area of responsibility and expertise, as described below, most closely approximates the subject field of the manuscript). Only when in doubt about an appropriate Editor, should manuscripts be sent to the Coordinating Editor responsible for the area in mathematics most closely connected to the paper. If in doubt about the area, send manuscript to the Managing Editor, to whom all other communication about the journal should also be addressed. (All addresses should include the line “Department of Mathematics”, unless another department is indicated.)

Managing Editor: Irwin Kra, SUNY at Stony Brook, Stony Brook, NY 11794-3651

CONTENTS—Continued from back cover

D. GEOMETRY
Pseudo-Riemannian metrics and Hirzebruch signature. By Peter R. Law ............... 791
Ruled submanifolds of finite type. By Franki Dillen ........................................ 795

E. LOGIC AND FOUNDATIONS
Closure sets of functions and a hierarchy of filters. By Robert Mignone ................. 799
Decidability of the existential theory of the set of natural numbers with order, divisibility,
power functions, power predicates, and constants. By Véronique Terrier .............. 809
Pointwise kernels of Schwartz distributions. By Todor Todorov ............................ 817

F. STATISTICS AND PROBABILITY
Continuity of multidimensional Brownian local times. By Shey Shuang Sheu .......... 821
Martingale transforms with unbounded multipliers. By J.-A. Chao and R.-L. Long .... 831

G. TOPOLOGY
A proof of the Popov conjecture for tori. By David L. Wehlau ............................ 839
Rationality of representations of linear Lie groups. By Dong Hoon Lee and Ta-Sun Wu 847
A note on the Dirichlet problem at infinity for manifolds of negative curvature. By Albert Borbély ................................................................. 865
Lusternik-Schnirelmann category of ribbon knot complement. By Takao Matumoto .... 873
On the period-energy relation. By Larry Bates and Jedrzej Śniatycki ..................... 877

SHORTER NOTES
On the existence of fixpoints of composite meromorphic functions. By Walter Bergweiler ................................................................. 879
PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY
CONTENTS
Vol. 114, No. 3                            March 1992                             Whole No. 393

A. ALGEBRA AND NUMBER THEORY

A characterization of Suzuki's simple groups.  By Shi Wujie  ........................................... 589
A transfer theorem for nonstandard uniserials.  By Paul C. Eklof  ............................................ 593
Posner's second theorem deduced from the first.  By Martin Mathieu  ........................................ 601
The conjugacy problem for graph products with infinite cyclic edge groups.  By Jody Meyer Lockhart  ..... 603
A new Castelnuovo bound for two codimensional subvarieties of $\mathbb{P}^r$.  By Alberto Alzati  .......... 607
The preservation of the semiprime Goldie property by strong semilattice sums.  By Yuen-Chan P. Ho  .... 613
Lifting primitivity of free nilpotent groups.  By C. K. Gupta and N. D. Gupta  .................................. 617
On multiple Salié sums.  By W. Duke  .......................................................... 623
A character sum for root system $G_2$.  By Ronald Evans  ..................................................... 627
Patching and analytic isomorphisms.  By Steven E. Landsburg  ................................................. 637
On a generalization of the notion of centralizing mappings.  By Matej Brešar  ............................. 641
Representations of Chevalley groups arising from admissible lattices.  By Zongzhu Lin  ...................... 651
Indecomposable division algebras.  By B. A. Sethuraman  .............................................................. 661

B. ANALYSIS

Fay's trisecant formula and cross-ratios.  By Cris Poor  ....................................................... 667
On the strongly extreme points of convex bodies in separable Banach spaces.  By B. V. Godun, Bor-Luh Lin, and S. L. Troyanski  ................................................... 673
Fourier summation with kernels defined by Jacobi polynomials.  By R. Lasser  ............................ 677
A family of type III extensions of the trace on the Choi algebra.  By P. J. Stacey  ......................... 683
The space of Pettis integrable functions is barrelled.  By Lech Drewnowski, Miguel Florescio, and Pedro J. Paúl  .................................................................................................................. 687
On convexity of level curves of harmonic functions in the hyperbolic plane.  By M. Papadimitrakis  ...... 695
On the image size of singular maps.  I.  By S. M. Bates  ............................................................ 699
Interpolating operators in nest algebras.  By M. Anoussis  ...................................................... 707
Convergence and integrability of trigonometric series with coefficients of bounded variation of order $(m, p)$.  By Vera B. Stanojevic  ................................... 711
Nuclear $C^*$-algebras have amenable unitary groups.  By Alan L. T. Paterson  ............................ 719
Reflection positivity for unitary representations of Lie groups.  By Humberto Prado  ....................... 723
Generalized convex functions and best $L_p$ approximation.  By Ronald M. Mathsen and Vasant A. Udbhaya ................................................................. 733
An extension of a theorem of Khavinson.  By John Ferry  ...................................................... 741
Domination and ergodicity for positive semigroups.  By W. Arendt and C. J. K. Batty  ..................... 743
Uniform limits of sequences of polynomials and their derivatives.  By Joseph A. Ball and Thomas R. Fanney  ................................................................. 749
On the minimum modulus of trigonometric polynomials.  By George Benke  .................................. 757
A remark on singular integrals with complex homogeneity.  By Roger L. Jones  .............................. 763
Required redundancy in the representation of reals.  By Michael Starbird and Thomas Starbird  ........ 769
The Vitali-Hahn-Saks theorem and measuroids.  By Sadahiro Saeki  ............................................. 775
The Neumann Laplacian of a jelly roll.  By Barry Simon  ............................................................ 783
A remark on the constants of the Littlewood-Paley inequality.  By S. K. Pichorides  ....................... 787
