Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Subscription information. *Proceedings of the American Mathematical Society* is published monthly. Subscription prices for Volumes 117-119 (1993) are $538 list; $430 institutional member; $323 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25; subscribers in India must pay a postage surcharge of $38. Expedited delivery to destinations in North America—$38; elsewhere—$90.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 1571, Annex Station, Providence, RI 02901-1571. *All orders must be accompanied by payment*. Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner’s consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that a fee of $1.00 plus $.25 per page for each copy be paid directly to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

Proceedings of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Proceedings, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for AMs-TeX or AMs-LATEX.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

As of March 1, 1993, the backlog for this journal was approximately 12 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in four months (the time necessary for editing and composing a typical issue).

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, there should be the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of Mathematical Reviews, published with the December issue starting in 1990, as well as from the electronic service e-MATH [telnet e-MATH.ams.org (or telnet 130.44.1.100)]. Login and password are e-math]. For journal abbreviations used in bibliographies, see the list of serials in the latest Mathematical Reviews annual index. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically-prepared manuscripts. The AMS encourages submission of electronically-prepared manuscripts in AMs-TEX or AMs-LATEX because properly prepared electronic manuscripts save the author proofreading time and
move more quickly through the production process. To this end, the Society has prepared “preprint” style files, specifically the amspt style of AMSTeX and the amsart style of AMSTeX, which will simplify the work of authors and of the production staff. Those authors who make use of these style files from the beginning of the writing process will further reduce their own effort.

Guidelines for Preparing Electronic Manuscripts provide additional assistance and are available for use with either AMSTeX or AMSTeX. Authors with FTP access may obtain these Guidelines from the Society’s Internet node e-MATH.ams.org (130.44.1.100). For those without FTP access they can be obtained free of charge from the e-mail address guide-elec@math.ams.org (Internet) or from the Publications Department, P. O. Box 6248, Providence, RI 02940-6248. When requesting Guidelines please specify which version you want.

Electronic manuscripts should be sent to the Providence office only after the paper has been accepted for publication. Please send electronically prepared manuscript files via e-mail to pub-submit@math.ams.org (Internet) or on diskettes to the Publications Department address listed above. When submitting electronic manuscripts please be sure to include a message indicating in which publication the paper has been accepted.

Two copies of the paper should be sent directly to the appropriate Editor and the author should keep one copy. At that time authors should indicate if the paper has been prepared using AMSTeX or AMSTeX. The Manual for Authors of Mathematical Papers should be consulted for symbols and style conventions. The Manual may be obtained free of charge from the e-mail address cust-serv@math.ams.org or from AMS, Customer Services Department, P. O. Box 6248, Providence, RI 02940-6248.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.
Editors

Authors are requested to send papers directly to the appropriate Editor (the one whose area of responsibility and expertise, as described below, most closely approximates the subject field of the manuscript). Only when in doubt about an appropriate Editor, should manuscripts be sent to the Coordinating Editor responsible for the area in mathematics most closely connected to the paper. If in doubt about the area, send manuscript to the Managing Editor, to whom all other communication about the journal should also be addressed. (All addresses should include the line “Department of Mathematics”, unless another department is indicated.)

Managing Editor: Irwin Kra, SUNY at Stony Brook, Stony Brook, NY 11794–3651  
e-mail: irwin@math.sunysb.edu

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS  
Coordinating Editor: Barbara Lee Keyfitz, University of Houston, Houston, TX 77204–3476,  
e-mail: keyfitz@uh.edu

Partial differential equations, Barbara Lee Keyfitz

Dynamical systems and global analysis, Charles Pugh, University of California at Berkeley, Berkeley, CA 94720

Ordinary differential equations and special functions, Hal L. Smith, Arizona State University, Tempe, AZ 85287, e-mail: athls@asuacad.bitnet

2. LIE GROUPS, TOPOLOGY, AND GEOMETRY  
Coordinating Editor: Peter Li, University of California, Irvine, CA 92717,  
e-mail: pli@orion.oac.uci.edu

Topological groups and Lie groups (symmetric spaces), Roe Goodman, Rutgers University, New Brunswick, NJ 08903, e-mail: goodman@math.rutgers.edu

Riemannian geometry (including affine, pseudo-Riemannian, contact, classical, and Lorentzian geometries), Christopher Croke, University of Pennsylvania, Philadelphia, PA 19104,  
e-mail: c.croke@math.upenn.edu

Geometric analysis (geometric PDE, minimal surfaces, harmonic maps) and Kahler geometry, Peter Li

Algebraic topology (higher dimensional topology), Thomas Goodwillie, Brown University, Box 1917, Providence, RI 02912, e-mail: tomg@brownvm.bitnet

Metric and geometric topology, James West, Cornell University, White Hall, Ithaca, NY 14853–7901, e-mail: west@mssun7.msi.cornell.edu

Set-theoretic and general topology, Franklin D. Tall, University of Toronto, Toronto, Ontario, Canada MSS A1A, e-mail: tall@math.toronto.edu

Low dimensional topology and differential topology (knot theory, 3- and 4-manifolds, Gauge-theory), Ronald Stern, University of California, Irvine, CA 92717, e-mail: rstern@math.uci.edu

3. ANALYSIS AND OPERATOR THEORY  
Coordinating Editor: Clifford J.Earle, Jr., Cornell University, White Hall, Ithaca, NY 14853,  
e-mail: cliff@math.cornell.edu

One complex variable and potential theory, Albert Baernstein II, Washington University, St. Louis, MO 63130, e-mail: C31801AB@WUVM.BITNET

Several complex variables, Eric Bedford, Indiana University, Swain Hall East, Bloomington, IN 47401, e-mail: BEDFORD@ucs.indiana.edu

Functional analysis and operator theory, Palle E. T. Jorgensen, University of Iowa, Iowa City, IA 52242

Functional analysis, Dale Alspach, Oklahoma State University, Stillwater, OK 74078,  
e-mail: alspach@hilbert.math.okstate.edu

Complex variables, functional analysis, and operator theory, Theodore W. Gamelin, UCLA, Los Angeles, CA 90024, e-mail: twg@math.ucla.edu

Real analysis, Andrew Bruckner, University of California, Santa Barbara, CA 93106,  
e-mail: bruckner@math.ucsb.edu

Harmonic and general analysis, J. Marshall Ash, DePaul University, Chicago, IL 60614,  
e-mail: MATJMA@DEPAUL.BITNET

Analytic number theory and automorphic forms, Dennis A. Hejhal, School of Mathematics, University of Minnesota, Minneapolis, MN 55455, e-mail: mf19402@uc.msc.umn.edu
4. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Coordinating Editor: M. Susan Montgomery, University of Southern California, DRB 155, Los Angeles, CA 90089–1113, e-mail: smontgom@math.usc.edu

General number theory, William Adams, University of Maryland, College Park, MD 20742, e-mail: wwa@nina.umd.edu

General algebra, Lance W. Small, University of California San Diego, La Jolla, CA 92093-0112, e-mail: lwsmall@ucsd.edu

Commutative algebra, Wolmer V. Vasconcelos, Rutgers University, New Brunswick, NJ 08903, e-mail: vasconcelos@math.rutgers.edu

Group theory, Ronald M. Solomon, Ohio State University, Columbus, OH 43210, e-mail: solomon@function.mps.ohio-state.edu

K-theory, algebraic groups, algebraic geometry, Eric Friedlander, Northwestern University, Evanston, IL 60208, e-mail: eric@math.nwu.edu

Combinatorics, Jeffry N. Kahn, Rutgers University, New Brunswick, NJ 08903, e-mail: jkahn@elbereth.rutgers.edu

Analytic number theory and automorphic forms, Dennis A. Hejhal, School of Mathematics, University of Minnesota, Minneapolis, MN 55455, e-mail: mf10402@uc.msc.umn.edu

Logic and foundations, Andreas R. Blass, University of Michigan, Ann Arbor, MI 48109–1003, e-mail: Andreas.R.Blass@ub.cc.umich.edu

Lie algebras and Lie groups, Roe Goodman, Rutgers University, New Brunswick, NJ 08903, e-mail: goodman@math.rutgers.edu

Noncommutative rings, Ken Goodearl, University of California, Santa Barbara, CA 93106, e-mail: goodearl@math.ucsb.edu

5. APPLIED MATHEMATICS, PROBABILITY, AND STATISTICS

Coordinating Editor: James Glimm, Department of Applied Mathematics and Statistics, SUNY at Stony Brook, Stony Brook, NY 11794–3600, e-mail: glimm@ams.sunysb.edu

Probability, Richard T. Durrett, Cornell University, White Hall, Ithaca, NY 14853–7901, e-mail: rtd@cornella.cit.cornell.edu

Statistics, Wei Y. Loh, Department of Statistics, University of Wisconsin, 1210 W. Dayton Street, Madison, WI 53706, e-mail: loh@stat.wisc.edu

Applied mathematics, David Sharp, Theoretic Division, Los Alamos National Laboratory MSB285, Los Alamos, NM 87545, e-mail:dhs@lanl.gov

John Trangenstein, Duke University, Durham, NC 27706, e-mail: johon@math.duke.edu

Operations research, Joseph S. B. Mitchell, Department of Applied Mathematics and Statistics, SUNY at Stony Brook, Stony Brook, NY 11794–3600, e-mail: jsbm@ams.sunysb.edu
Cyclic inequalities. By Shigeru Yamagami

An elementary simultaneous approximation theorem. By Theodore Kilgore

An example of a Carathéodory complete but not finitely compact analytic space. By Marek Jarnicki, Peter Pflug, and Jean-Pierre Vigué

A martingale inequality related to exponential square integrability. By Jill Pipher

Refinements of the density and \( \mathcal{F} \)-density topologies. By Krzysztof Ciesielski and Lee Larson

On Burkholder's biconvex-function characterization of Hilbert spaces. By Jinsik Mok Lee

The Radon transform of Boehmians. By Piotr Mikusiński and Ahmed Zayed

D. GEOMETRY

Computational aspects of soap bubble deformations. By U. Pinkall and I. Sterling

E. LOGIC AND FOUNDATIONS

Strong measure zero and strongly meager sets. By Timothy J. Carlson

Analytic mappings on hyperfinite sets. By C. Ward Henson and David Ross

Ordered subrings of the reals in which output sets are recursively enumerable. By Robert E. Byerly

The Baire category and forcing large Lindelöf spaces with points \( G_\delta \). By Isaac Gorelic

F. STATISTICS AND PROBABILITY

A result on multidimensional quantization. By Eric B. Hall and Gary L. Wise

Independent events and independent experiments. By Yuliy M. Baryshnikov and Bennett Eisenberg

On generalized maximal functions. By Bernd S. W. Schroeder

Sur un théorème spectral et son application aux noyaux lipschitziens. By Hubert Hennion

G. TOPOLOGY

Links and nonshellable cell partitionings of \( S^3 \). By Steve Armentrout

Tight extensions of normed spaces. By N. V. Rao

An invariant of links in a handlebody associated with the spin \( j \) representation of \( U_q(\mathfrak{sl}(2, \mathbb{C})) \). By Shigekazu Nakabo

Convex real projective structures on closed surfaces are closed. By Suhyoung Choi and William M. Goldman

The Morse index theorem in the degenerate endmanifold case. By Nancy Hingston and Diane Kalish

When does restricted continuity on continuous function graphs imply joint continuity?. By John P. Dalbec

SHORTER NOTES

A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

A note on the Jacobson radical. By Yu-Lee Lee .................................................. 337
Nilpotency degree of cohomology rings in characteristic two. By George S. Avrunin and
Jon F. Carlson ............................................................. 339
Undecidability of parametric solutions of polynomial equations. By K. H. Kim and F. W.
Roush ................................................................. 345
A module induced from a Whittaker module. By Edward McDowell .......................... 349
Test elements in excellent rings with an application to the uniform Artin-Rees property.
By Ian M. Aberbach ..................................................... 355
Simple zeros of the Riemann zeta-function. By A. Y. Cheer and D. A. Goldston ... 361
Eulerian operators and the Jacobian conjecture. By Arno van den Essen ................ 373
Cardinalities of \( \eta_1 \)-ordered fields. By Zikica Perović ........................................... 379
Shimura subgroups of Jacobians of Shimura curves. By San Ling ............................ 385
Exact embeddings into Artinian rings. By Raymond A. Beauleiu and Anders Jensen . 391
Cyclically presented groups embedded in one-relator products of cyclic groups. By Colin
M. Campbell, Patricia M. Heggie, Edmund F. Robertson, and Richard M. Thomas .... 401

B. ANALYSIS

A matrix solution to the inverse Perron-Frobenius problem. By P. Góra and A. Boyarsky 409
Note on the integrability of superharmonic functions. By Noriaki Suzuki .................. 415
The essential spectral radius of dominated positive operators. By Josep Martínez .... 419
Faithful representations of crossed products by endomorphisms. By Sarah Boyd, Navin
Keswani, and Iain Raeburn ............................................. 427
Inversions of Hermite semigroup. By Du-Won Byun .............................................. 437
Weak compactness in \( L^1(\mu, X) \). By J. Diestel, W. M. Ruess, and W. Schachermayer 447
Extension of holomorphic mappings from \( E \) to \( E'' \). By Luiza A. Moraes ................ 455
Weak-polynomial convergence on a Banach space. By J. A. Jaramillo and A. Prieto ... 463
On 4-lacunary sequences generated by ergodic toral endomorphisms. By Karol
Krzyżyński ............................................................. 469
Schatten ideal behavior of a generalized Hardy operator. By Krzysztof Nowak ........ 479
On two absolute Riesz summability factors of infinite series. By Mehmet Ali Sarigöl .. 485
A note on commutativity of unbounded representations. By Schōichi Ōta .................. 489
Counterexamples for Brown-Pedersen’s conjecture in “\( C^* \)-algebras of real rank zero”. By
Hiroyuki Osaka .......................................................... 495
Divergence of averages obtained by sampling a flow. By Mustafa Akcoglu, Alexandra
Bellow, Andres del Junco, and Roger L. Jones ......................................................... 499
Weak-invariant properties of the norm topology. By I. Namjoka and R. Pol ............ 507
Large time behavior of the heat kernel: on a theorem of Chavel and Karp. By Barry
Simon ................................................................. 513
Inequalities in the most simple Sobolev space and convolutions of \( L_2 \) functions with weights.
By Saburo Saitoh ......................................................... 515

(Continued on inside back cover)
