PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY

CONTENTS

Vol. 137, No. 11 Whole No. 605 November 2009

A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Wai Kiu Chan and Byeong-Kweon Oh, Almost universal ternary sums of triangular numbers .................................................. 3553
Winfried Kohnen and Jyoti Sengupta, Signs of Fourier coefficients of two cusp forms of different weights ........................................... 3563
Guanghua Ji, Lower bounds for moments of automorphic $L$-functions over short intervals .......................................................... 3569
Marco A. Garuti, On the “Galois closure” for torsors ........................................... 3575
Olexandr Ganyushkin, Volodymyr Mazorchuk, and Benjamin Steinberg, On the irreducible representations of a finite semigroup .......... 3585
Mark Andrea A. de Cataldo and Luca Migliorini, On singularities of primitive cohomology classes .................................................. 3593
Shichun Yang, Bo He, and Alain Togbé, A $2 \times 2$ lattice space-time code of the highest rank .................................................. 3601
Naihuan Jing, Kailash C. Misra, and Chongbin Xu, Bosonic realization of toroidal Lie algebras of classical types .................................. 3609
Gunnar Fløystad and Mike Stillman, Geometric properties derived from generic initial spaces ..................................................... 3619
Kyouko Kimura, Lyubeznik resolutions and the arithmetical rank of monomial ideals ..................................................... 3627
Ravi A. Rao, A stably elementary homotopy ........................................... 3637
Carlos D’Andrea and Luis Felipe Tabera, Tropicalization and irreducibility of generalized Vandermonde determinants .......................... 3647
Lutz Strüngmann, On endomorphism rings of $B_1$-groups that are not $B_2$-groups ..................................................... 3657

B. ANALYSIS

Miroslav Engliš, Kunyu Guo, and Genkai Zhang, Toeplitz and Hankel operators and Dixmier traces on the unit ball of $\mathbb{C}^n$ ................ 3669
Martín Argerami and Pedro Massey, Towards the carpenter’s theorem .... 3679
Fernando Abadie and Laura Martí Pérez, On the amenability of partial and enveloping actions ..................................................... 3689
Dongsheng Li, Gerhard Ströher, and Lihe Wang, Symmetry of integral equations on bounded domains ................................................ 3695
G. Gripenberg, Harnack’s inequality for viscosity solutions to degenerate elliptic equations in two variables ....................................... 3703
Fabio Bagarello, Atsushi Inoue, and Camillo Trapani, Bicommutants of reduced unbounded operator algebras ........................................ 3709
Florin Catrina, A note on a result of M. Grossi ........................................... 3717
Michael C. Fulkerson, A residual radial limit zero set .............................. 3725
Mariusz Urbański, Geometric rigidity for class $S$ of transcendental meromorphic functions whose Julia sets are Jordan curves .......... 3733
Sneh Lata, Meghna Mittal, and Vern I. Paulsen, An operator algebraic proof of Agler’s factorization theorem ...................................... 3741
Cyril Houdayer, Free Araki-Woods factors and Connes’ bicentralizer problem ................................................... 3749
Ben Mathes, Substrictly cyclic operators .................................................... 3757
Zoltán Léka, A Katznelson–Tzafriri type theorem in Hilbert spaces ................ 3763
A. Jiménez-Vargas, A. Morales Campoy, and Moisés Villegas-Vallecillos,  
The uniform separation property and Banach–Stone theorems for lattice-valued Lipschitz functions .................................................. 3769

Adel B. Badi, An index theorem for Toeplitz operators on the quarter-plane ... 3779

Luis Bernal-González, Common hypercyclic functions for multiples of convolution and non-convolution operators .............................. 3787

Jussi Behrndt, Qutaibeh Katatbeh, and Carsten Trunk, Non-real eigenvalues of singular indefinite Sturm-Liouville operators ......................... 3797

Kenichiro Yamamoto, On the weaker forms of the specification property and their applications ................................................................. 3807

Pekka Koskela, Aleksandra Zapadinskaya, and Thomas Zürcher,  
Generalized dimension distortion under planar Sobolev homeomorphisms ... 3815

Benjamin Willson, Reiter nets for semidirect products of amenable groups and semigroups ................................................................. 3823

T. Kalmes, Hypercyclic $C_0$-semigroups and evolution families generated by first order differential operators ........................................ 3833

Lajos Molnár, Thompson isometries of the space of invertible positive operators 3849

Hasi Wulan, Dechao Zheng, and Kehe Zhu, Compact composition operators on BMOA and the Bloch space ............................................ 3861

Akihiko Miyachi, Fabio Nicola, Silvia Rivetti, Anita Tabacco, and Naohito Tomita, Estimates for unimodular Fourier multipliers on modulation spaces 3869

C. APPLIED MATHEMATICS

Patricio Jara, Rational approximation schemes for solutions of the first and second order Cauchy problem ........................................... 3885

D. GEOMETRY

Rolf Schneider, Verification of polytopes by brightness functions ............. 3899

Tatsuyoshi Hamada and Katsuhiro Shiohama, Complete real hypersurfaces in compact rank one symmetric spaces .............................. 3905

E. LOGIC AND FOUNDATIONS

Anand Pillay, On genericity and weight in the free group ......................... 3911

G. TOPOLOGY

Marc Culler and Peter B. Shalen, Betti numbers and injectivity radii ........... 3919

Noriyuki Abe, Vanishing of extensions of twisted Verma modules .............. 3923

L. Koss, A fundamental dichotomy for Julia sets of a family of elliptic functions 3927

Vesta Coufal, A parametrized fixed point theorem ............................... 3939

D. Cooper, D. D. Long, and M. Thistlethwaite, Constructing non-congruence subgroups of flexible hyperbolic 3-manifold groups .................. 3943

CORRIGENDA

Luca Chiantini and Angelo Felice Lopez, Corrigendum to: “Focal loci of families and the genus of curves on surfaces” .............................. 3951
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for \texttt{AMSLATEX} or \texttt{AMSTEX}.

Information on the backlog for this journal can be found on the AMS website starting from \url{http://www.ams.org/proc}.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at \url{www.ams.org/peer-review-submission}, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from \url{www.ams.org/msnhtml/serials.pdf}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}.

Electronically prepared manuscripts. The AMS encourages electronically prepared manuscripts, with a strong preference for \texttt{AMSLATEX}. To this end, the Society has prepared \texttt{AMSLATEX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMSLATEX} style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \texttt{LATEX}, using \texttt{AMSLATEX} also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \texttt{AMSLATEX} papers also move more efficiently through the production stream, helping to minimize publishing costs.
\texttt{\LaTeX} is the highly preferred format of \TeX, but author packages are also available in \texttt{\LaTeX}E. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \texttt{\LaTeX}E or plain \TeX{} are normally not acceptable due to the high amount of technical time required to ensure that the file will run properly through the AMS in-house production system. \texttt{\LaTeX}E users will find that \texttt{\LaTeX}E is the same as \texttt{\LaTeX} with additional commands to simplify the typesetting of mathematics, and users of plain \TeX{} should have the foundation for learning \texttt{\LaTeX}E.

Authors may retrieve an author package for \textit{Proceedings of the AMS} from \url{www.ams.org/proc/procauthorpac.html} or via FTP to \url{ftp.ams.org} (login as \texttt{anonymous}, enter your complete email address as password, and type \texttt{cd pub/author-info}). The \textit{AMS Author Handbook} and the \textit{Instruction Manual} are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to \url{tech-support@ams.org} (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{\LaTeX}E or \texttt{\LaTeX} and the publication in which your paper will appear. Please be sure to include your complete email address.

\textbf{After acceptance.} The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at \url{www.ams.org/submit-book-journal/}, sent via email to \url{pub-submit@ams.org} (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via e-mail or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

\textbf{Electronic graphics.} Comprehensive instructions on preparing graphics are available starting from \url{www.ams.org/authors/journals.html}. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15\% and 85\%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10\%.

\textbf{AMS policy on making changes to articles after posting.} Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of
the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article. The errata article will appear in a future print issue and will link back and forth on the Web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

TEX files available upon request. TEX files are available upon request for authors by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The TEX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. Note: Because TEX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, TEX files cannot be guaranteed to run through the author’s version of TEX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author’s TEX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.

Managing Editor: Ronald A. Fintushel, Michigan State University, East Lansing, MI 48824-1027 USA; e-mail: ronfint@math.msu.edu

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS
Coordinating Editor: Chuu-Lian Terng, University of California, Irvine, CA 92697-3875 USA; e-mail: cterng@math.uci.edu

Ergodic theory and dynamical systems, Bryna Kra, Northwestern University, Evanston, IL 60208-2730; e-mail: kraig@math.northwestern.edu

Global analysis, noncommutative geometry, and the mathematics of string theory, Varghese Mathai, School of Mathematical Sciences, The University of Adelaide, SA 5005, Australia; e-mail: mathai.varghese@adelaide.edu.au

Ordinary differential equations and dynamical systems, Yingfei Yi, School of Mathematics, Georgia Institute of Technology, Atlanta, GA 30332-0001 USA; e-mail: yi@math.gatech.edu

Partial differential equations, Matthew J. Gursky, University of Notre Dame, 255 Hurley Hall, Notre Dame, IN 46556-4618 USA; e-mail: mgursky@nd.edu

2. TOPOLOGY AND GEOMETRY
Coordinating Editor: Jon G. Wolfson, Michigan State University, East Lansing, MI 48824-1027 USA; e-mail: wolfson@math.msu.edu

Algebraic topology, Brooke Shipley, University of Illinois at Chicago, 851 S. Morgan Street, Chicago, IL 60607-7045 USA; e-mail: bshipley@math.uic.edu

Differential geometry (Riemannian geometry, complex geometry, and symplectic geometry), Jon G. Wolfson

Geometric analysis (geometric PDE, minimal surfaces, and harmonic maps), Richard A. Wentworth, Johns Hopkins University, Baltimore, MD 21218 USA; e-mail: wentworth@jhu.edu

Geometric topology, Alexander N. Dranishnikov, University of Florida, 358 Little Hall, Gainesville, FL 32611-8105 USA; e-mail: dranish@math.ufl.edu

Low dimensional topology, gauge theory, 4-manifolds, Daniel Ruberman, Brandeis University, Waltham, MA 02254-9110 USA; e-mail: ruberman@brandeis.edu
