A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Deke Zhao, *Skew categories, smash product categories and quasi-Koszul categories* 2657
Elena Alemany, Antonio Beltrán, and María José Felipe, *Nilpotency of normal subgroups having two G-class sizes* 2663
Joseph P. Brennan and Neil Epstein, *Noether normalizations, reductions of ideals, and matroids* 2671
Louiza Fouli and Craig Huneke, *What is a system of parameters?* 2681
Yu Tsumura, *Primality tests for $2^p \pm 2^{(p+1)/2} + 1$ using elliptic curves* 2697
Guyan Robertson, *Invariant distributions on projective spaces over local fields* 2705

B. ANALYSIS

Heping Liu and Yingzhan Wang, *A restriction theorem for the H-type groups* 2713
Derek Gustafson, *A generalized Poincaré inequality for a class of constant coefficient differential operators* 2721
Fan Jinhua, *On extremal quasiconformal mappings of non-landslide type* 2729
Victor Kaftal, P. W. Ng, and Shuang Zhang, *Positive combinations and sums of projections in purely infinite simple C*-algebras and their multiplier algebras* 2735
Dawei Yang, *Stably weakly shadowing transitive sets and dominated splittings* 2747
Javier Carrillo-Alanís, *On local Khintchine inequalities for spaces of exponential integrability* 2753
A. Alexandrou Himonas and Gerson Petronilho, *Real-valued non-analytic solutions for the generalized Korteweg-de Vries equation* 2759
Eugen Mihailescu and Mariusz Urbański, *Hausdorff dimension of the limit set of conformal iterated function systems with overlaps* 2767
Simon Lücking, *Subspaces of almost Daugavet spaces* 2777
Christopher Mouron, *Positive entropy homeomorphisms of chainable continua and indecomposable subcontinua* 2783
Y. Gordon, M. Junge, M. Meyer, and S. Reisner, *The GL-l.u.st. constant and asymmetry of the Kalton-Peck twisted sum in finite dimensions* 2793
P. J. Rippon and G. M. Stallard, *Boundaries of escaping Fatou components* 2807
Yun-guang Lu, *Resonance for the isothermal system of isentropic gas dynamics* 2821
Ting Zhang and Daoyuan Fang, *Random data Cauchy theory for the incompressible three dimensional Navier–Stokes equations* 2827
C. Chen and C-H. Chu, *Hypercyclic weighted translations on groups* 2839
Can Minh Le, *On subspace-hypercyclic operators* 2847
Dong-Huang Wei, *On the asymptotic formula for the solution of degenerate elliptic partial differential equations* 2863
Michael Didas and Jörg Eschmeier, *Inner functions and spherical isometries* 2877
Dongyang Chen and Bentuo Zheng, *Remarks on Lipschitz p-summing operators* 2891
Adrián Infante, *A remark on the maximal operator for radial measures* 2899
D. GEOMETRY

Seong-Hun Paeng, Buser’s isoperimetric inequalities with integral norms of Ricci curvature ................................................................. 2903
Bin Guo and Haizhong Li, The second variational formula for the functional $\int v^{(6)}(g)dV_g$ ................................................................. 2911
Oliver Ebner and Stefan Haller, Harmonic cohomology of symplectic fiber bundles ................................................................. 2927
Andrew A. Cooper, A characterization of the singular time of the mean curvature flow ................................................................. 2933
Hans-Joachim Hein, Weighted Sobolev inequalities under lower Ricci curvature bounds ................................................................. 2943

E. LOGIC AND FOUNDATIONS

Tuna Altınel and John S. Wilson, Linear representations of soluble groups of finite Morley rank ................................................................. 2957

F. STATISTICS AND PROBABILITY

Luigi Accardi and Andreas Boukas, The Schrödinger Fock kernel and the no-go theorem for the first order and Renormalized Square of White Noise Lie algebras ................................................................. 2973

G. TOPOLOGY

Alejandro Illanes, A circle is not the generalized inverse limit of a subset of $[0, 1]^2$ ................................................................. 2987
D. Dikranjan and Gábor Lukács, On zero-dimensionality and the connected component of locally pseudocompact groups ................................................................. 2995
Hiroaki Ishida, Symplectic real Bott manifolds ................................................................. 3009
Libing Huang and Xiaohuan Mo, On geodesics of Finsler metrics via navigation problem ................................................................. 3015
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for \textsc{ams-\LaTeX} or \textsc{amscite}.

Information on the backlog for this journal can be found on the AMS website starting from \url{http://www.ams.org/proc}.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at \url{www.ams.org/submission/proc}, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from \url{www.ams.org/msnhtml/serials.pdf}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}.

Electronically prepared manuscripts. The AMS encourages electronically prepared manuscripts, with a strong preference for \textsc{ams-\LaTeX}. To this end, the Society has prepared \textsc{ams-\LaTeX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \textsc{ams-\LaTeX} style file and the \texttt{\LaTeX} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \LaTeX, using \textsc{ams-\LaTeX} also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \textsc{ams-\LaTeX} papers also move more efficiently through the production stream, helping to minimize publishing costs.
AMSTeX is the highly preferred format of \TeX, but author packages are also available in AMSTeX. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \LaTeXX or plain \TeXX are normally not acceptable due to the high amount of technical time required to ensure that the file will run properly through the AMS in-house production system. \LaTeXX users will find that AMSTeX is the same as \LaTeXX with additional commands to simplify the typesetting of mathematics, and users of plain \TeXX should have the foundation for learning AMSTeX.

Authors may retrieve an author package for Proceedings of the AMS from www.ams.org/proc/procauthorpac.html or via FTP to ftp.ams.org (login as anonymous, enter your complete email address as password, and type cd pub/author-info). The AMS Author Handbook and the Instruction Manual are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify AMSTeX or AMSTeX and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of
the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article. The errata article will appear in a future print issue and will link back and forth on the Web to the original article online.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
