Vol. 142, No. 9  Whole No. 663  September 2014

A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

O. V. Ogievetsky and L. Poulain d’Andecy, Fusion procedure for Coxeter groups of type $B$ and complex reflection groups $G(m, 1, n)$ .......................... 2929
Bao-Xuan Zhu, Some positivities in certain triangular arrays .................. 2943
Vincenzo Mantova and Umberto Zannier, Artin-Whaples approximations of bounded degree in algebraic varieties ........................................... 2953
Marie Jameson and Robert P. Schneider, Combinatorial applications of Möbius inversion ........................................................... 2965
Sergio Estrada, Pedro Guíl Asensio, and Jan Trlifaj, Descent of restricted flat Mittag-Leffler modules and generalized vector bundles ......................... 2973
D. Rogalski, S. J. Sierra, and J. T. Stafford, Algebras in which every sub-algebra is noetherian ....................................................... 2983
Ian H. Dinwoodie, Vanishing configurations in network dynamics with asynchronous updates ................................................................. 2991
Gabriel Navarro, Pronormal subgroups and zeros of characters .................. 3003
Gyula Károlyi and Zoltán Lóránt Nagy, A simple proof of the Zeilberger–Bressoud $q$-Dyson theorem ....................................................... 3007
Martin Lorenz, On the stratification of noncommutative prime spectra ...... 3013
Kazushi Ueda, Hyperplane sections and stable derived categories ............. 3019
Alexander Grishkov, Michael Kinyon, and Gábor P. Nagy, Solvability of commutative automorphic loops .............................................. 3029
Frauke M. Bleher, Large universal deformation rings ............................... 3039
Vyacheslav Futorny, Dimitar Grantcharov, and Volodymyr Mazorchuk, Weight modules over infinite dimensional Weyl algebras .................. 3049

B. ANALYSIS

Árpád Baricz, Landen inequalities for special functions ............................ 3059
Alexander Yu. Solynin, An estimate for the Green’s function .................. 3067
Alon Levy, Michelle Manes, and Bianca Thompson, Uniform bounds for preperiodic points in families of twists ........................................ 3075
Krzysztof Kurdyka and Stanisław Spodzieja, Separation of real algebraic sets and the Lojasiewicz exponent ................................................. 3089
S. Waleed Noor, Complex symmetry of composition operators induced by involutive ball automorphisms .............................................. 3093
Zenon Jan Jabłoński, Il Bong Jung, and Jan Stochel, A hyponormal weighted shift on a directed tree whose square has trivial domain ............... 3097
Benito Pires and Roland Rabanal, Vector fields whose linearisation is Hurwitz almost everywhere ..................................................... 3117
Joseph Auslander, Gernot Greschonig, and Anima Nagar, Reflections on equicontinuity ................................................................. 3129
Vassili Nestoridis, Universal Laurent series on domains of infinite connectivity .... 3139
Marius B. Stefan, On doubly periodic phases ........................................... 3149
Julien Roques, On generalized hypergeometric equations and mirror maps .... 3153
Jarod Hart, A new proof of the bilinear $T(1)$ Theorem ............................ 3169
Nuno Costa Dias, Maurice A. de Gosson, and João Nuno Prata, Maximal covariance group of Wigner transforms and pseudo-differential operators ... 3183
G. Ponce and A. Tahzibi, Central Lyapunov exponent of partially hyperbolic diffeomorphisms of $\mathbb{T}^3$ ......................................................... 3193
Santosh Ghimire and Charles N. Moore, A lower bound in the tail law of the iterated logarithm for lacunary trigonometric series ......................... 3207
Marius Dadarlat, A stably contractible $C^*$-algebra which is not contractible ... 3217

C. APPLIED MATHEMATICS
Habib Ammari, Emmanuel Bossy, Josselin Garnier, Loc Hoang Nguyen, and Laurent Seppecher, A reconstruction algorithm for ultrasound-modulated diffuse optical tomography ............................................. 3221

D. GEOMETRY
Haizhong Li and Yong Wei, Lower volume growth estimates for self-shrinkers of mean curvature flow ................................................................. 3237
Nicolai Hähnle, Steven Klee, and Vincent Pilaud, Obstructions to weak decomposability for simplicial polytopes .......................................... 3249

E. LOGIC AND FOUNDATIONS
Philipp Hieronymi and Michael Tychonievich, Interpreting the projective hierarchy in expansions of the real line ........................................ 3259

F. STATISTICS AND PROBABILITY
Arka P. Ghosh, Reza Rastegar, and Alexander Roitershtein, On a directionally reinforced random walk ...................................................... 3269
Simon Griffiths, Ross J. Kang, Roberto Imbuzeiro Oliveira, and Viresh Patel, Tight inequalities among set hitting times in Markov chains ........... 3285

G. TOPOLOGY
Jonathan Bowden, Symplectic 4-manifolds with fixed point free circle actions . 3299
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of **length not exceeding 15 published pages**. Published pages are the same size as those generated in the style files provided for \texttt{AMSL-TEX} or \texttt{AMST-TEX}.

Information on the backlog for this journal can be found on the AMS website starting from \url{http://www.ams.org/proc}.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at \url{www.ams.org/submission/proc} or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a **descriptive title**, followed by an **abstract** that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The **descriptive title** should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The **abstract** should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from \url{www.ams.org/msnhtml/serials.pdf}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}.

Electronically prepared manuscripts. The AMS encourages electronically prepared manuscripts, with a strong preference for \texttt{AMSL-TEX}. To this end, the Society has prepared \texttt{AMSL-TEX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMSL-TEX} style file and the \	exttt{label} and 	exttt{ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \texttt{TEX}, using \texttt{AMSL-TEX} also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \texttt{AMSL-TEX} papers also move more efficiently through the production stream, helping to minimize publishing costs.
\texttt{AMS-LATEX} is the highly preferred format of \texttt{TEX}, but author packages are also available in \texttt{AMS-\LaTeX}. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \texttt{\LaTeX} or plain \texttt{\TeX} are normally not acceptable due to the high amount of technical time required to ensure that the file will run properly through the AMS in-house production system. \texttt{\LaTeX} users will find that \texttt{AMS-L\LaTeX} is the same as \texttt{\LaTeX} with additional commands to simplify the typesetting of mathematics, and users of plain \texttt{\TeX} should have the foundation for learning \texttt{AMS-L\LaTeX}.

Authors may retrieve an author package for \textit{Proceedings of the AMS} from \texttt{www.ams.org/proc/procauthorpac.html} or via FTP to \texttt{ftp.ams.org} (login as \texttt{anonymous}, enter your complete email address as password, and type \texttt{cd pub/author-info}). The \textit{AMS Author Handbook} and the \textit{Instruction Manual} are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to \texttt{tech-support@ams.org} or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{AMS-\LaTeX} or \texttt{AMS-\TeX} and the publication in which your paper will appear. Please be sure to include your complete email address.

\textbf{After acceptance.} The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at \texttt{www.ams.org/submit-book-journal/}, sent via email to \texttt{pub-submit@ams.org}, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

\textbf{Electronic graphics.} Comprehensive instructions on preparing graphics are available starting from \texttt{www.ams.org/authors/journals.html}. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15\% and 85\%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10\%.

\textbf{AMS policy on making changes to articles after publication.} Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.
Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
